*Fluid Dynamics for Physicists* Jun 17 2020 It is over three hundred and fifty years since Torricelli discovered the law obeyed by fountains, yet fluid dynamics remains an active and important branch of physics. This book provides an accessible and comprehensive account of the subject, emphasising throughout the fundamental physical principles, and stressing the connections with other branches of physics. Beginning with a gentle introduction, the book goes on to cover Bernoulli's theorem, compressible flow, potential flow, surface waves, viscosity, vorticity dynamics, thermal convection and instabilities, turbulence, non-Newtonian fluids and the propagation and attenuation of sound in gases. Undergraduate or graduate students in physics or engineering who are taking courses in fluid dynamics will find this book invaluable, but it will also be of great interest to anyone who wants to find out more about this fascinating subject.

*Where Centering Meets Chinese Discourse* May 17 2020 This book addresses the question: What can close discourse analysis contribute to the understanding of language? To do so, it presents a centering theory-based computational approach to discourse analysis concerning Chinese *bei* passive sentences, *disposal* *ba* constructions, *ditransitive* *gei* sentences, and *locative* *fang* sentences. The book first discusses the use of discourse analysis in the context of *bei* and *ba* constructions and then demonstrates how discourse analysis can contribute to the syntactic and semantic studies of these sentences. It also examines the various thematic roles differentiated in these four special sentence patterns, namely agent, recipient, theme/patient, and locative, and reveals the various degrees of discourse accessibility of these thematic roles. Exploring the correlation between centering theory and Chinese discourse, the book is a valuable resource for anyone interested in discourse analysis and Chinese special sentential structures, especially the formal approaches to these issues.
