This book describes the role of the medieval Orthodox Church in the Byzantine Empire (c.600-c.1453). As an integral part of its policy it was (as in western Christianity) closely linked with many aspects of everyday life both official and otherwise. It was a formative period for Orthodoxy. It had to face doctrinal problems and heresies; at the same time it experienced the continuity and deepening of its liturgical life. While holding fast to the traditions of the fathers and the councils, it saw certain developments in doctrine and liturgy as also in administration. Part I discusses the landmarks in ecclesiastical affairs within the Empire as well as the creative influence exercised on the Slavs and the increasing contacts with westerners particularly after 1204. Part II gives a brief account of the structure of the medieval Orthodox Church, its officials and organization, and the spirituality of laity, monks, and clergy. The Fragments of the Methodists is a new attempt to give a first corpus of its kind. Manuela Tecusan has collected, edited, and translated all the surviving testimonials concerning one of the most influential 'schools' or doctrines of medicine in late antiquity: Methodism. This volume contains the fragments accompanied by a textual apparatus and facing English translation. The introduction provides a guide to the collection. The second volume presents a commentary to all fragments and two glossaries of medical and pharmacological terms. Apart from its intrinsic novelty, this material affords fresh insights

into broad topics of contemporary concern, such as the relation between philosophy and medicine, problems of biomedical ethics, the epistemological foundations of the sciences, the role of causal explanation - explored here in their fascinating historical set-up. Many of the long texts included in the Methodist collection become now available in a translation for the first time. High Pressure Thermal Processing provides a detailed understanding on the technology itself, what it can be used for, and the benefits of the technology over conventional processing. From an academic perspective, all sections clearly outline the intricacies of the technology, new applications (other than for spore inactivation) and how technology related process variables impact on food, quality attributes, textures, safety, and chemical aspects, etc. From a manufacturer perspective, throughout the product development stage and the actual commercial implementation, the book content will assist users greatly in doing this efficiently and safely. Within a single reference book, this book reaches researchers in academia who face the challenge to drive the science and assist the manufacturers to commercialize these new technologies. It is also ideal for regulators around the world who need to assess these new technologies and implement guidelines for manufacturers. Provides a comprehensive overview on the technology, including food safety aspects, new product developments and regulations Thoroughly explores HPTP for microbial spore inactivation, the sterilization of ambient stable low-acid food products Covers HPTP and its effect on the production of food processing contaminants As the financial and environmental costs of fossil fuels continue to rise, the ancient art of windpower is making a steady comeback, and many countries are promoting wind energy generation as part of a drive toward a sustainable future. Yet many environmental enthusiasts prefer a more do-it-yourself approach. "Windpower Workshop" provides all the essential information for people wanting to build and maintain a windpower system for their own energy needs. Hugh Piggott runs his own succesful windpower business in Scotland. This book opens the door to multiobjective optimization for students in fields such as engineering, management, economics and applied mathematics. It offers a comprehensive introduction to multiobjective optimization, with a primary emphasis on multiobjective linear programming and multiobjective integer/mixed integer programming. A didactic book, it is mainly intended for undergraduate and graduate students, but can also be useful for researchers and practitioners. Further, it is accompanied by an interactive software package - developed by the authors for Windows platforms - which can be used for teaching and decision-making support purposes in multiobjective linear programming problems. Thus, besides the textbook's coverage of the essential concepts, theory and methods, complemented with illustrative examples and exercises, the computational tool enables students to experiment and enhance their technical skills, as well as to capture the essential characteristics of real-world problems.
