The first book in a hilarious chapter book series that tackles anxiety in a fun, kid-friendly way. Perfect for both beginning and reluctant readers, and fans of Diary of a Wimpy Kid! A humorous and touching series about facing your fears and embracing new experiences—with a truly unforgettable character—from author Lenore Look and New York Times bestselling and Caldecott Honor winning illustrator LeUyen Pham. Alvin, an Asian American second grader, is afraid of everything—elevators, tunnels, girls, and, most of all, school. He’s so afraid of school that, while he’s there, he never, ever, says a word. But at home, Alvin is a very loud superhero named Firecracker Man, a brother to Calvin and Anibelly, and a gentleman-in-training, just like his dad. With the help of his family, can Alvin take on the outside world without letting his fears get the best of him? “Alvin’s a winner.” —New York Post [V.23] The second part of Henry the Fourth. 1940.--[v.24-25] The sonnets. 1924.--[v.26] Troilus and Cressida. 1953.--[v.27] The life and death of King Richard the Second. 1955. This is the fourth and final volume of the Cambridge edition of the works of John Webster. It contains four plays Webster wrote in collaboration, one - Sir Thomas Wyatt, a

historical tragedy based around Lady Jane Grey - as part of a team of five led by Thomas Dekker, two - Westward Ho and Northward Ho, city comedies that prompted Chapman, Jonson, and Marston's Eastward Ho - with Thomas Dekker alone, and one - The Fair Maid of the Inn, an Italianate tragicomedy of which Webster wrote the largest share - with John Fletcher, Philip Massinger and John Ford. With the inclusion of these four plays, this Cambridge edition becomes the first complete works of John Webster. The edition preserves the original spelling of the plays, poetry, and prose, and incorporates the most recent editorial scholarship, including information on Webster's share in the collaborative plays, and new critical methods, textual theory, and theatrical analysis. The exceptional mechanical, optical, surface and biocompatibility properties of nanodiamond have gained it much interest. Exhibiting the outstanding bulk properties of diamond at the nanoscale in the form of a film or small particle makes it an inexpensive alternative for many applications. Nanodiamond is the first comprehensive book on the subject. The book reviews the state of the art of nanodiamond films and particles covering the fundamentals of

growth, purification and spectroscopy and some of its diverse applications such as MEMS, drug delivery and biomarkers and biosensing. Specific chapters include the theory of nanodiamond, diamond nucleation, low temperature growth, diamond nanowires, electrochemistry of nanodiamond, nanodiamond flexible implants, and cell labelling with nanodiamond particles. Edited by a leading expert in nanodiamonds, this is the perfect resource for those new to, and active in, nanodiamond research and those interested in its applications. Includes glossaries. This new version of the bestselling Computer-Aided Multivariate Analysis has been appropriately renamed to better characterize the nature of the book. Taking into account novel multivariate analyses as well as new options for many standard methods, Practical Multivariate Analysis, Fifth Edition shows readers how to perform multivariate statistical analyses and understand the results. For each of the techniques presented in this edition, the authors use the most recent software versions available and discuss the most modern ways of performing the analysis. New to the Fifth Edition Chapter on regression of correlated outcomes resulting from clustered or longitudinal samples Reorganization

of the chapter on data analysis preparation to reflect current software packages Use of R statistical software Updated and reorganized references and summary tables Additional end-of-chapter problems and data sets The first part of the book provides examples of studies requiring multivariate analysis techniques; discusses characterizing data for analysis, computer programs, data entry, data management, data clean-up, missing values, and transformations; and presents a rough guide to assist in choosing the appropriate multivariate analysis. The second part examines outliers and diagnostics in simple linear regression and looks at how multiple linear regression is employed in practice and as a foundation for understanding a variety of concepts. The final part deals with the core of multivariate analysis, covering canonical correlation, discriminant, logistic regression, survival, principal components, factor, cluster, and log-linear analyses. While the text focuses on the use of R, S-PLUS, SAS, SPSS, Stata, and STATISTICA, other software packages can also be used since the output of most standard statistical programs is explained. Data sets and code are available for download from the book's web page and CRC Press Online. This book goes

beyond the rules in teaching students the subtle differences between proper and improper conduct. The book's balanced and engaging mix of materials supports its comprehensive coverage of professional responsibility issues. Refined through years of classroom use, this casebook offers: condensed coverage of professional responsibility issues in less space (about 120 pages shorter than the regular 10th edition); well-balanced mix of cases, secondary sources, timely materials (often drawn from recent headlines), engaging problems, and challenging notes; discussion beyond the rules and from different perspectives, to recognize that the law is not necessarily self-evident and covers many subtleties; excellent case selection; realistic, helpful, and abundant problems, many based on actual events, that facilitate class discussion and enable students to understand the rules and regulations that will govern their professional behavior; detailed notes which provide in-depth treatment of the issues; high-profile author (Gillers is a highly visible and recognized national authority on professional responsibility); and an accessible and engaging style which is characterized by variety, clarity, and humor. 1955. This highly unusual book began as a
serious inquiry into Schrödinger's question,
“What is life?”, and as a celebration of life itself.
It takes the reader on a voyage of discovery
through many areas of contemporary physics,
from non-equilibrium thermodynamics and
quantum optics to liquid crystals and fractals, all
necessary for illuminating the problem of life. In
the process, the reader is treated to a rare and
exquisite view of the organism, gaining novel
insights not only into the physics, but also into
“the poetry and meaning of being alive.” This
much-enlarged third edition includes new
findings on the central role of biological water in
organizing living processes; it also completes the
author's novel theory of the organism and its
applications in ecology, physiology and brain
