Traditionally, personality and psychopathology have been distinct areas of inquiry. This important volume reviews influential research programs that increasingly bridge the gap between the two areas. Presented are compelling perspectives on whether certain personality traits or structures confer risks for mental illness, how temperament interacts with other influences on psychological adaptation, links between personality disorders and mood and anxiety disorders, implications for effective intervention, and more. Seminar paper from the year 2013 in the subject Psychology - Personality Psychology, grade: 2,3, University of Warwick (Dept. of Psychology), course: Individual Differences, language: English, abstract: This essay aims to prove the effectiveness of nomothetic approaches in personality research and general applicability. It will not ignore the advantages of idiographic methods but then emphasize the theoretical pre-eminence and empirical benefits of nomothetic ideas. Evaluation strategies based on L. A. Pervin and Maltby et al. shall answer the question why desired outcomes are being achieved more frequently by the nomothetic paradigm. Finally, this paper should demonstrate that in dealing with the complexity of human personalities, profound investigations might sometimes be more interesting but almost never more effective. Produced principally for units HPS307, HPS691 (Personality) offered by the Faculty of Health and Behavioural Sciences' School of Psychology in Deakin University's Open Campus Program. Today, more than ever before, there is a realization that communicating properly, especially in writing, is essential for all the job aspirants as well as those employees—budding managers and others—eager to build up their career. Taking this scenario into account, this book equips the reader with the ability to learn and enhance the writing skills in English. From fundamentals of grammar to precis, paragraph and essay writing, this book dwells on all aspects of the language besides listing the words (both new and old) to enhance one's word power, and the foreign words used in the English language. Divided into eight sections, the book describes eight effective tools to master the art of writing. The book begins with the basics of writing, and it then goes to give a careful analysis of functional grammar, vocabulary, common errors committed and their rectifications. Finally, the book showcases the intricacies of formal and informal writings and creative writing to make a learner proficient in these areas. Each section is supported with simple examples, and easy-to-perform Practice Exercises along with their answers. The book is intended for the undergraduate students (both regular and correspondence courses) of all universities, and higher secondary (plus 2) students of all boards. The book will also be beneficial for the students appearing for the competitive examinations and interviews as well as for the general reader who wishes to improve his/her English writing skills. MySearchLab provides students with a complete understanding of the research process so they can complete research projects confidently and efficiently. Students and instructors with an internet connection can visit www.MySearchLab.com and receive immediate access to thousands of full articles from the EBSCO ContentSelect database. In addition, MySearchLab offers extensive content on the research process itself—including tips on how to navigate and maximize time in the campus library, a step-by-step guide on writing a research paper, and instructions on how to finish an academic assignment with endnotes and bibliography. Appropriate for undergraduate-level courses in Personality and Personality Theory. Successfully classroom tested, this revised examination introduces the reader to the principal theories of the field which are of greatest current importance to the understanding of personality, including a thorough treatment of cognitive theory. The authors clearly present each theory and explore the research, applications, and evaluations that stem from it. The volume's first chapter reveals the structure of theory, ways of comprehending and evaluating theories, and the major issues facing all personality theories. The final chapter gives a comparative analysis and overall evaluation of the various theories and discusses the future of personality theory. The three primary papers in this special issue explore personality measurement in both directions, that is, more narrow and specific and more broad and heterogeneous. The first paper reviews research on conditional reasoning, with a focus on the construct of aggression. Next, tolerance for contradiction is explored, which is defined as a mode of thinking that accepts and even thrives on apparent contradictory information. The last primary paper covers core self evaluation, which combines measures of four traits: locus of control, self-esteem, generalized self-efficacy, and emotional stability. The special issue concludes with provocative and insightful critique and commentary of the three primary papers. It notes some important points of criticism, but is primarily positive and laudatory of these research programs. For those who teach students in psychology, education, and the social sciences, the Handbook of Demonstrations and Activities in the Teaching of Psychology, Second Edition provides practical applications and rich sources of ideas. Revised to include a wealth of new material (56% of the articles are new), these invaluable reference books contain the collective experience of teachers who have successfully dealt with students' difficulty in mastering important concepts about human behavior. Each volume features a table that lists the articles and identifies the primary and secondary courses in which readers can use each demonstration. Additionally, the subject index facilitates retrieval of articles according to topical headings, and the appendix notes the source as it originally appeared in Teaching of Psychology--especially useful for users needing to cite information. The official journal of the Society for the Teaching of Psychology, Division Two of the American Psychological Association, Teaching of Psychology is a highly respected publication devoted to improving teaching and learning at all educational levels. Volume III consists of 95 articles about teaching personality, abnormal, clinical-counseling, and social psychology. Divided into four sections (one for each specialty), the book suggests ways to work with case studies, advocate a research perspective, use the arts and literature as teaching tools, and otherwise facilitate understanding of theoretical concepts. Personality Capture and Emulation is the gateway to an amazing future that actually may be achieved, enabling the preservation and simulation of human personalities at progressively higher levels of fidelity. This challenge is no longer the province merely of uninhibited visionaries, but has become a solid field of research, drawing upon a wide range of information technologies in human-centered computing and cyber-human systems. Even at modest levels of accomplishment, research in this emerging area requires convergence of cognitive, social, and cultural sciences, in cooperation with information engineering and artificial intelligence, thus stimulating new multidisciplinary perspectives. Therefore this book will inspire many specific research and development projects that will produce their own valuable outcomes, even as the totality of the work moves us closer to a major revolution in human life. Will it ever really be possible to transfer a human personality at death to a technology that permits continued life? Or will people come to see themselves as elements in a larger socio-cultural system, for which a societal information system can provide collective immortality even after the demise of individuals? A large number and variety of pilot studies and programming projects are offered as prototypes for research that innovators in many fields may exploit for the achievement of their own goals. Together, they provide an empirical basis to strengthen the intellectual quality of several current debates at the frontiers of the human and information sciences. This is the original work on which Hans Eysenck's fifty years of research have been built. It introduced many new ideas about the nature and measurement of personality into the field, related personality to abnormal psychology, and demonstrated the possibility of testing personality theory experimentally. The book is the result of a concentrated and cooperative effort to discover the main dimensions of personality, and to define them operationally, that is, by means of strictly experimental, quantitative procedures. More than three dozen separate researches were carried out on some 10,000 normal and neurotic subjects by a research team of psychologists and psychiatrists. A special feature of this work is the close collaboration between psychologists and psychiatrists. Eysenck believes that the exploration of personality would have reached an advanced state much earlier had such a collaboration been the rule rather than the exception in studies of this kind. Both disciplines benefit by working together on the many problems they have in common. In his new introduction, Eysenck discusses the difficulty he had in conveying his belief to scientists from opposite ends of the psychology spectrum when he first began work on this book. He goes on to explain the basis from which Dimensions of Personality developed. Central to any concept of personality, he states, must be hierarchies of traits organized into a dimensional system. The two major dimensions he posited, neuroticism and extraversion, were in disfavor with most scientists of personality at the time. Now they form part of practically all descriptions of personality. Dimensions of Personality is a landmark study and should be read by both students and professionals in the fields of psychiatry, psychology, and sociology. This revision of the Schultz's popular text surveys the field, presenting theory-by-theory coverage of the major theorists who represent the psychoanalytic, neopsychanalytic, life-span, trait, humanistic, cognitive, behavioral, and social-learning approaches, as well as clinical and experimental work. Where warranted, the authors show how the development of certain theories was influenced by events in a theorist's personal and professional life. This thoroughly revised Seventh Edition now incorporates more examples, tables, and figures to help bring the material to life for students. The new content in this edition reflects the dynamism in the field. The text explores how race, gender, and culture issues figure in the study of personality and in personality assessment. In addition, a final integrative chapter looks at the study of personality theories and suggests conclusions that can be drawn from the many theorists' work. This authoritative handbook is the reference of choice for researchers and students of personality. Leading authorities describe the most important theoretical approaches in personality and review the state of the science in five broad content areas: biological bases; development; self and social processes; cognitive and motivational processes; and emotion, adjustment, and health. Within each area, chapters present innovative ideas, findings, research designs, and measurement approaches. Areas of integration and consensus are discussed, as are key questions and controversies still facing the field. Written in an informal and engaging style, Saving the Earth as a Career is an ideal resource for students and professionals pursuing a career in conservation. The book explores the major skills needed to become an effective conservation professional by offering useful advice on a range of topics. Chapters include: Is this the right career for you? Designing a program of study Designing and executing a project Attending conferences and making presentations Writing papers Finding a job Making a difference Saving the Earth as a Career 2e is a friendly, accessible guide with a global perspective for anyone interested in becoming a conservation or environmental professional, and teachers will find this an invaluable resource for university students at all levels. MySearchLab provides students with a complete understanding of the research process so they can complete research projects confidently and efficiently. Students and instructors with an internet connection can visit www.MySearchLab.com and receive immediate access to thousands of full articles from the EBSCO ContentSelect database. In addition, MySearchLab offers extensive content on the research process itself—including tips on how to navigate and maximize time in the campus library, a step-by-step guide on writing a research paper, and instructions on how to finish an academic assignment with endnotes and bibliography. Theories of Personality or Personality Psychology. In place of the historical, categorical, and research methods of teaching personality, Berecz maps theories and research onto a grid that allows readers to analyze and compare. Instead of learning theoretical terms or analyzing research findings related to a particular theory, students will evaluate and compare personality constructs in different zones of interdisciplinary research. This approach facilitates both comprehension and retention, making sense of an encyclopedic volume of theories and research. This text provides a comprehensive introduction to the key personality theorists by combining biographical information on each theorist with his or her contributions to the field, including her or his ranking among the world's most respected psychologists. In addition, Allen provides a tabular format—that is, a running comparison between the major theorists, allowing students to analyze new theories against theories learned in previous chapters. The unique style of Allen's book is strengthened through his conversational tone, enabling students to easily grasp an understanding of the key people and movements in the field of personality. The articles concern the understanding, prediction, and control of attitudes; the functional autonomy of motives; a psychological interpretation of personality; motivation in personality, etc. Now in a revised and expanded fourth edition, this definitive reference and text has more than 50% new material, reflecting a decade of theoretical and empirical advances. Prominent researchers describe major theories and review cutting-edge findings. The volume explores how personality emerges from and interacts with biological, developmental, cognitive, affective, and social processes, and the implications for well-being and health. Innovative research programs and methods are presented throughout. The concluding section showcases emerging issues and new directions in the field. New to This Edition *Expanded coverage of personality development, with chapters on the overall life course, middle childhood, adolescence, and early adulthood. *Three new chapters on affective processes, plus chapters on neurobiology, achievement motivation, cognitive approaches, narcissism, and other new topics. *Section on cutting-edge issues: personality interventions, personality manifestations in everyday life, geographical variation in personality, self-knowledge, and the links between personality and economics. *Added breadth and accessibility--42 more concise chapters, compared to 32 in the prior edition. Studienarbeit aus dem Jahr 2013 im Fachbereich Soziologie - Arbeit, Beruf, Ausbildung, Organisation, Note: -, - (Lunawada Arts, Commerce and Science College), Sprache: Deutsch, Abstract: Today many interesting researches are being conducted in the field of psychology. Research on home environment, anxiety, mental health, emotional maturity etc find the place in many leading journals of psychology. Topic of personality traits has drawn attention of many researchers in psychology. Research in personality traits has received a great deal of attention in the last few decades. Comparative study on personality traits of different social groups is worth exploring. Therefore a researcher has selected an interesting topic of comparing the personality traits of Arts, Commerce and Science students. It is also worthwhile to compare the personality traits of males and females. Different inventories of evaluating personality are available. From the available test of personality, the researcher has selected 16 PF of cattle to collect relevant data. Personality is defined as characteristics and distinctive ways of behaving according to C.T. Morgan. The individual behaves in the environment according to his personality traits. The oldest approach to the problem of identifying characteristic and distinctive ways of behaving is to establish a limited number of traits that can be measured with standardized personality tests. 16 PF is one such standard personality inventory. A scientific way of selecting and measuring a limited number of traits is the technique of factor analysis. Different researchers have identified several factors of personality and constructed standard personality inventories. One such popular personality test is 16 PF of cattle. The trait name represents the 16 personality factor obtained by factor analysis of large number of rating of different groups. In the present research, researcher has used standardized Gujarati version of original 16 PF of cattle. MySearchLab provides students with a complete understanding of the research process so they can complete research projects confidently and efficiently. Students and instructors with an internet connection can visit www.MySearchLab.com and receive immediate access to thousands of full articles from the EBSCO ContentSelect database. In addition, MySearchLab offers extensive content on the research process itself—including tips on how to navigate and maximize time in the campus library, a step-by-step guide on writing a research paper, and instructions on how to finish an academic assignment with endnotes and bibliography. Students hear the voices of important theorists in their own words with introductions providing context and critical thinking questions to improve understanding. The nine key theoretical perspectives spanning over 100 years of important contributions to the field. Courses in Personality and/or Personality Theories . Integrating Curricular and Co-Curricular Endeavors to Enhance Student Outcomes reports on innovative approaches taken in universities in a number of nations of their experience in bringing together learning in courses with learning in co- and extracurricular activities. MySearchLab provides students with a complete understanding of the research process so they can complete research projects confidently and efficiently. Students and instructors with an internet connection can visit www.MySearchLab.com and receive immediate access to thousands of full articles from the EBSCO ContentSelect database. In addition, MySearchLab offers extensive content on the research process itself—including tips on how to navigate and maximize time in the campus library, a step-by-step guide on writing a research paper, and instructions on how to finish an academic assignment with endnotes and bibliography. With a newly revised and streamlined organization, the Sixth Edition maintains its cross-cultural, global, and gender-balanced perspectives while emphasizing humanistic and transpersonal psychologists in its exploration of the positive aspects of major personality theorists, stressing each one's relevance for personal understanding. Highly praised for its exceptionally well-written style and accessibility, this book encourages and supports readers in using themselves as the primary touchstone for each theory. Each chapter gives readers opportunities to validate their insights through direct experience, and, by observing their own reactions, come to their own conclusions about the utility and value of each theory.a newly revised, and a Companion Website For professionals with a career in psychology, sociology, and/or social work. Seminar paper from the year 2009 in the subject Psychology - Social Psychology, grade: 1,3, University of Cologne (Wirtschafts- und Sozialpsychologie), course: Seminar: Self and Self-Insight, language: English, abstract: Do you know who you are? Can you accurately predict how you will behave in a certain situation? What do you know about your character traits? Research has shown that most people think they themselves know they character better than anyone else and could predict their future and daily behavior more accurately than anyone else (Pronin, Kruger, Savitsky&Ross, 2001; Vazire & Mehl, 2008). This sounds logical, because a person has accumulated lots of information about himself as well as experience during his whole life and has privileged access to his feelings and thoughts. But do these predictions correspond with the reality? Or are there motives that deform our self-evaluation? In this term paper I will analyze how we perceive ourselves, whether we accurately perceive our character traits and which factors influence our self-evaluation. A definitive, authoritative and up-to-date resource for anyone interested in the theories, models and assessment

methods used for understanding the many facets of Human personality and individual differences. This brand new Handbook of Personality Theory and Assessment 2-Volume Set constitutes an essential resource for shaping the future of the scientific foundation of personality research, measurement, and practice. There is need for an up-to-date and international Handbook that reviews the major contemporary personality models Vol. 1 and associated psychometric measurement instruments Vol. 2 that underpin the scientific study of this important area of individual differences psychology, and in these two Handbooks this is very much achieved. Made unique by its depth and breadth the Handbooks are internationally edited and authored by Professors Gregory J. Boyle, Gerald Matthews, and Donald H. Saklofske and authored by internationally known academics, this work will be an important reference work for a host of researchers and practitioners in the fields of individual differences and personality assessment, clinical psychology, educational psychology, work and organizational psychology, health psychology and other applied fields as well. Volume 2: Personality Measurement and Assessment. Covers psychometric measurement of personality and has coverage of the following broad topics, listed by section heading: " General Methodological Issues " Multidimensional Personality Instruments " Assessment of Biologically-Based Traits " Assessment of Self-Regulative Traits " Implicit, Projective And Objective Measures Of Personality " Abnormal Personality Trait Instruments " Applications of Psychological Testing Essay from the year 2004 in the subject Psychology - Social Psychology, University of Phoenix, language: English, abstract: Human behavior has been studied for thousands of years, yet still researchers find interesting aspects of human behavior to continue to study. It is the complexities, still somewhat beyond comprehension, that leaves the exploration of human beings as the true final frontier. Following are discussions on just an infinitesimal portion of the plethora of research on the interesting topic of human behavior. This original research ranges from the study of the ontogeny of serial order behavior in humans to an examination of the theory of planned behavior in the exercise domain. MySearchLab provides students with a complete understanding of the research process so they can complete research projects confidently and efficiently. Students and instructors with an internet connection can visit www.MySearchLab.com and receive immediate access to thousands of full articles from the EBSCO ContentSelect database. In addition, MySearchLab offers extensive content on the research process itself—including tips on how to navigate and maximize time in the campus library, a step-by-step guide on writing a research paper, and instructions on how to finish an academic assignment with endnotes and bibliography. This successful text puts "personality" back into the personality course, integrating the classic insights of the personality theorists with modern research in a manner that will fascinate and encourage deeper thought. This text explores classic theory from a perspective that encourages critical thinking and fosters intellectual insight with respect to human nature. For example, it shows the relevance of classic theory to topics of personality and culture, evolution, ego, gender, and person-situation interactionism. Employing the highest scientific standards, "Personality" also uses a wide range of unique and provocative pedagogical devices that have been shown to motivate students. Hailed as the best-written, most relevant, personality textbook on the market, Friedman and Schustack's third edition brings the field of personality to today's diverse student body. Research Paper from the year 2011 in the subject Business economics - Business Management, Corporate Governance, grade: A, Harvard University (Harvard Business School), course: Psychology of Strategic Leadership, language: English, abstract: 1. Introduction Much has been written on which types of people have more influence, are more successful negotiators and the techniques related to persuasion. However, this assumes that most people have the ability to enter a situation and accurately judge their audiences and respond accordingly to cues and effectively use numerous appropriate persuasion techniques. The ongoing hypotheses in the literature is that all people are equal when it comes to persuasion, whereas in practice we may use how much somebody cares about when it is one friend and using social pressure on another friend depending on that friend's characteristics. Very little research has been done on how the identity of the audience changes their responsiveness to different persuasion techniques. The authors of this paper examine how the responsiveness to Cialdini's six persuasion techniques varies by gender, cultural background and personality type. Each of the techniques is briefly described in the table below. Our results show that there are indeed differences in responsiveness to techniques depending on demographic and personality differences. 2. Theoretical background 2.1 Personality and persuasion 2.1.1 Five-factor model of personality Fifty years ago, Tupes and Christal (1961) established a five-factor model of personal traits (often termed the Big Five) consisting of neuroticism, extraversion, openness to experience, agreeableness and conscientiousness. 2 Today, this framework is widely used to describe the most important aspects of personalities. 3 Several studies showed that the five traits are stable over time and can be applied across cultures. 4 Table 2 lists the most representative attributes of the extremes for each of the five factors. 2.1.2 Pe The growing interest in research on temperament during the last decade has been recorded by several authors (e. g. , R. Plomin; J. E. Bates) from such sources of information as the Social Sciences Citation Index or Psychological Abstracts. The editors' inquiry shows that the number of cases in which the term temperament was used in the title of a paper or in the paper's abstract published in Psychological Abstracts reveals an essential increase in research on temperament. During the years 1975 to 1979, the term temperament was used in the title and/or summary of 173 abstracts (i. e. , 34. 6 publications per year); during the next five years (1980-1984), it was used in 367 abstracts (73. 4 publications per year), whereas in the last five years (1985 to 1989), the term has appeared in 463 abstracts, that is, in 92. 6 publications per year. Even if the review of temperament literature is restricted to those abstracts, it can easily be concluded that temperament is used in different contexts and with different meanings, hardly allowing any comparisons or general statements. One of the consequences of this state of affairs is that our knowledge on temperament does not cumulate despite the increasing research activity in this field. This situation in temperament research motivated the editors to organize a one week workshop on The Diagnosis of Temperament (Bielefeld, Federal Republic of Germany, September 1987). This book is useful for IGNOU MA PSYCHOLOGY first year groups of students. It contains previous years important solved answers that enable students learn about the subject and prepare for their examinations. A perusal of past questions papers gives an idea of the type of questions asked, the paper pattern and so on, it is for this benefit, we provide these IGNOUMPC-01 COGNITIVE PSYCHOLOGY, LEARNING AND MEMORY Notes.... Students are advised to refer these solutions in conjunction with their reference books. It will help you to improve your exam preparations... In this book, Detailed Explanatory Answers have been provided for the questions for Better Understanding of the Candidates. Hope you Like...& Best of Luck for your Examination. Published by MeetCoogle MySearchLab provides students with a complete understanding of the research process so they can complete research projects confidently and efficiently. Students and instructors with an internet connection can visit www.MySearchLab.com and receive immediate access to thousands of full articles from the EBSCO ContentSelect database. In addition, MySearchLab offers extensive content on the research process itself—including tips on how to navigate and maximize time in the campus library, a step-by-step guide on writing a research paper, and instructions on how to finish an academic assignment with endnotes and bibliography. The various perspectives of the field of personality provide the organizing framework for this text. Each perspective is presented in two chapters and is introduced by a prologue that describes the assumptions and themes of the perspective. This book describes a range of viewpoints that are used by personality psychologists today. Each perspective on personality is presented in a pair of chapters, introduced by a prologue. The prologue provides an overview of that perspective's orienting assumptions and core themes. What is Personality psychology? Methods in the study of personality; issues in personality assessment; types, traits and interactionism; needs and motives; inheritance, evolution, and personality; biological processes and personality; psychoanalytic structure and process; anxiety, defense, and self-protection; ego psychology; psychosocial theories; conditioning theories; social-cognitive learning theories; humanistic psychology: self-actualization and self-determination; personal constructs; contemporary cognitive views; self-regulation; overlap and integration of perspectives. Personality, Theories of Personality Teachers, I Believe, Are The Most Responsible And Important Members Of Society Because Their Professional Efforts Affect The Fate Of The Earth. This notebook is for Teacher. You can gift this notebook to your Teacher. This is lined notebook. This notebook is especially made for teacher. Great for taking down notes, as a diary, for collecting ideas and save memories. Specifications: ? Layout: Lined ? Dimensions: 6" x 9" ? Soft, matte laminated paperback cover ? 100 pages or 50 sheets ? Acid Free Paper Personality can be understood from at least two perspectives. One focuses on stable, between-person differences, or traits. The other perspective focuses on within-person differences and dynamics, i.e., fluctuations in personality in response to situations and across time. This Research Topic reflects recent developments in personality research to integrate both trait and dynamic perspectives. An integrated view on personality recognizes both stability in between-person differences and within-person change. Contributors are drawn from research teams across Europe, North America and Australasia, and from basic and applied fields, including organizational, educational, and clinical. The studies reported provide new evidence in support of an integrative approach, highlight currently active areas of research and propose new directions of research. Current streams of research include the study of contingent units of personality and within-person processes underlying traits, the comparisons of findings based on within- vs. between-person data, the conceptualisation and operationalization of perceived and objective change in situation variables, the malleability of personality and the potential for personality interventions. Integrative approaches using within-person designs provide new, bottom-up insights into general principles of personality that explain differences between people while reflecting the complexities of within-person personality dynamics at the level of the individual. MySearchLab provides students with a complete understanding of the research process so they can complete research projects confidently and efficiently. Students and instructors with an internet connection can visit www.MySearchLab.com and receive immediate access to thousands of full articles from the EBSCO ContentSelect database. In addition, MySearchLab offers extensive content on the research process itself—including tips on how to navigate and maximize time in the campus library, a step-by-step guide on writing a research paper, and instructions on how to finish an academic assignment with endnotes and bibliography. This comprehensive collection of over 130 carefully edited documents (speeches, treaties, statements, and articles) traces the rise and fall of the Cold War -- from its roots at Yalta and Potsdam in 1945 through the collapse of the Soviet state in 1991 -- making the great events of era come alive through the words and phrases of those who were actively involved. Set in historical context by brief introductions, the documents are arranged in chronological order, grouped into six major periods of the Cold War. Covers The Origins of the Cold War; The Nuclear Arms Race; The U-2 Affair; The Berlin Wall; The Cuban Missile Crisis; The Korean and Vietnam Wars; The Sino-Soviet Split; The End of the Cold War. Draws selections from a variety of countries and leaders on both sides of the Iron Curtain and treats the entire Cold War as an era in world history, not just U.S. history. Precedes each document and event with a concise but thorough introduction that explains its background and significance, places it in its proper historical context, and conveys the flavor and fervor of the developments that surrounded it. For anyone interested in the history of the Cold War. MySearchLab provides students with a complete understanding of the research process so they can complete research projects confidently and efficiently. Students and instructors with an internet connection can visit www.MySearchLab.com and receive immediate access to thousands of full articles from the EBSCO ContentSelect database. In addition, MySearchLab offers extensive content on the research process itself—including tips on how to navigate and maximize time in the campus library, a step-by-step guide on writing a research paper, and instructions on how to finish an academic assignment with endnotes and bibliography. Organized by individual theorists, this comprehensive text examines the major movements in the field through an historic and humanistic approach. This text provides a comprehensive introduction to the key personality theorists by combining biographical information on each theorist with his or her contributions to the field, including her or his ranking among the world's most respected psychologists. In addition, Allen provides a tabular format—that is, a running comparison between the major theorists, allowing students to analyze new theories against theories learned in previous chapters. The unique style of Allen's book is strengthened through his conversational tone, enabling students to easily grasp an understanding of the key people and movements in the field of personality. Language, whether spoken or written, is an important window into people's emotional and cognitive worlds. Text analysis of these narratives, focusing on specific words or classes of words, has been used in numerous research studies including studies of emotional, cognitive, structural, and process components of individuals' verbal and written language. It was in this research context that the LIWC program was developed. The program analyzes text files on a word-by-word basis, calculating percentage words that match each of several language dimensions. Its output is a text file that can be opened in any of a variety of applications, including word processors and spreadsheet programs. The program has 68 pre-set dimensions (output variables) including linguistic dimensions, word categories tapping psychological constructs, and personal concern categories, and can accommodate user-defined dimensions as well. Easy to install and use, this software offers researchers in social, personality, clinical, and applied psychology a valuable tool for quantifying the rich but often slippery data provided in the form of personal narratives. The software comes complete on one 3 1/2 diskette and runs on any Windows-based computer.
