Understand the benefits and adverse effects of medications commonly taken by patients receiving physical rehabilitation. Know the latest changes in traditional treatment paradigms for specific diseases. Discover how and why various medications are being used in new ways. Aimed at physical therapists and students of rehabilitation, this series exposes the reader to today's most challenging concepts in rehabilitation in a problem-solving format. The emphasis is on clinical decision making. The intent of the series is to promote a clear grasp of concepts in clinical practice through an analytical perspective that will complement the academic or workshop presentations in the field of rehabilitation therapy. RESEARCH IN REHABILITATION COUNSELING provides the basics that one would need to begin conducting a research investigation. It was written as a primary text for graduate level students and practitioners concerning the role of research in contemporary rehabilitation counseling. It is the authors' intent to provide a comprehensive overview of the philosophical, ethical, methodological, and analytic fundamentals of social science research, as well as to specify aspects of rehabilitation

research that distinguish it from scientific inquiry in other helping professions. It has been thoroughly revised to accurately reflect the variation and wealth of research methodologies used in contemporary rehabilitation counseling research—more than 300 new references have been added. Most of the research examples cited were published in peer-reviewed rehabilitation counseling journals over the past decade, and these examples represent the current status of research methods as well as the most relevant contemporary topic areas of research and scholarship in the field. Accordingly, it may be used both as a research textbook and as a general introduction to the current scholarship. Because this book was written as an introductory research methods textbook for graduate students in rehabilitation counseling, the authors focus much of the information contained herein on the role of readers as professional consumers of rehabilitation research. It will prove to be an invaluable resource for counselors, administrators, policymakers, educators, researchers, people with disabilities, and consumer advocates. Enhance your clinical practice and your understanding of rehabilitation literature through applied statistics! Step-by-step, this interactive learning experience makes clinically relevant statistical procedures easier to understand, organize, interpret, and use when evaluating patients and the effectiveness of your practice. Only statistical procedures with direct clinical application have been selected to guide you through patient assessments, selecting the best tools for your practice, enhancing your understanding of predicting prognosis and responders to treatment, and outlining a method to critique clinical practice guidelines. With this reader-friendly, real-world approach you'll be able to meet the need for evidence to support your practice, gain a deeper understanding of clinical research, and systematically evaluate patient outcomes. Represents collaboration among orthopaedists, physical trainers, and athletic trainers. It reviews the rehabilitation needs for all types of sports injuries, stressing the treatment of the entire kinetic chain with various exercises. Chapters have been extensively revised, featuring new concepts and techniques. The 3rd edition includes four new chapters (Proprioception and Neuromuscular Control; Cervical Spine Rehabilitation; Functional Training and Advanced Rehabilitation; and Plyometrics), new contributors and new features, such as summary boxes and tables. Recognized as two of the world's leading authorities on the subject, Susan Herdman and Richard Clendaniel, joined by a team of expert contributors, deliver the 4th Edition of the field's definitive text on the management of vestibular diseases and disorders. From assessment through therapy, they present the scientific and clinical knowledge you need to distinguish between vestibular and non-vestibular dizziness and to plan and implement the appropriate treatments. Case Studies in Rehabilitation is a series of case studies compiled into one reference text for the student. This necessary textbook will allow the reader to analyze "real-life" examples of individuals with a variety of diagnoses and to develop clinical reasoning skills. A variety of cases are presented in Case Studies in Rehabilitation covering myriad topics such as orthopedics, neurology, rheumatology, and oncology. These case studies represent the primary adult pathologies, impairments, and functional limitations seen by clinicians. The case studies will also allow the reader to focus on the concept of disability for an individual when developing a comprehensive plan of care. The user-friendly format

allows the user to choose from one of the many topics for practice in developing treatment plans, case analysis or to focus on one area of practice. An important function of this book is that it allows for the integration of didactic learning and hands-on practice when patients are not readily available. All case studies are presented in a narrative format with accompanying forms that are frequently encountered in clinical practice. Case Studies in Rehabilitation will also help students as they learn to interact with the patients they will be treating in their future careers. This text will allow them to fine-tune their skills in dealing with a variety of different patients and cases and indicate how to handle each individual case in the best possible matter.

Marketing text: This innovative book explores how games can be serious, even though most people generally associate them with entertainment and fun. It demonstrates how videogames can be a valuable tool in clinics and demonstrates how clinicians can use them in physical rehabilitation for various pathologies. It also describes step by step their integration in rehabilitation, from the (gaming) technology used to its application in clinics. Further, drawing on an extensive literature review, it discusses the pros and cons of videogames and how they can help overcome certain obstacles to rehabilitation. The last part of the book examines the main challenges and barriers that still need to be addressed to increase and improve the use and efficacy of this new technology for patients. The book is intended for physiotherapists and clinicians alike, providing a useful tool for all those seeking a comprehensive overview of the field of serious games and considering adding it to conventional rehabilitation treatment. Patient education is an important aspect of the rehabilitation process. As a science, it consists of the health care professional's development of patient education skills. Delivering information, education, and training in rehabilitation is intended to promote and optimize clinical interventions including compliance, continuity of care, and patient satisfaction. This text applies patient education skills to the clinical rehabilitation process. In a reader-friendly manner, it explores various teaching and learning theories, models of instruction, as well as communication, ethical, legal and cu "... this manual does an excellent job of merging traditional and contemporary principles of neurotherapeutic intervention, all with a practical, functional orientation." -- Physical Therapy Care Reports, Vol. 2, No. 1, January 1999 Here's an integrated physical therapy model applicable to a variety of clinical problems and diagnoses. After exploring the application of treatment techniques, the authors focus on clinical decision-making strategies using clinical problems and progressively comprehensive case studies. "This text offers a wonderful source of ideas for developing laboratory experiences that will be directly applicable to clinical situations that our students will face in their future practice." -- Mark W. Pape, MSPT, Angelo State University, San Angelo, Texas Better patient management starts with better documentation! Documentation for Rehabilitation: A Guide to Clinical Decision Making in Physical Therapy, 3rd Edition shows how to accurately document treatment progress and patient outcomes. Designed for use by rehabilitation professionals, documentation guidelines are easily adaptable to different practice settings and patient populations. Realistic examples and practice exercises reinforce concepts and encourage you to apply what you've learned. Written by expert physical therapy educators Lori Quinn and James

Gordon, this book will improve your skills in both documentation and clinical reasoning. A practical framework shows how to organize and structure PT records, making it easier to document functional outcomes in many practice settings, and is based on the International Classification for Functioning, Disability, and Health (ICF) model - the one adopted by the APTA. Coverage of practice settings includes documentation examples in acute care, rehabilitation, outpatient, home care, and nursing homes, as well as a separate chapter on documentation in pediatric settings. Guidelines to systematic documentation describe how to identify, record, measure, and evaluate treatment and therapies - especially important when insurance companies require evidence of functional progress in order to provide reimbursement. Workbook/textbook format uses examples and exercises in each chapter to reinforce your understanding of concepts. NEW Standardized Outcome Measures chapter leads to better care and patient management by helping you select the right outcome measures for use in evaluations, re-evaluations, and discharge summaries. UPDATED content is based on data from current research, federal policies and APTA guidelines, including incorporation of new terminology from the Guide to Physical Therapist 3.0 and ICD-10 coding. EXPANDED number of case examples covers an even broader range of clinical practice areas. Rehabilitation is dedicated to helping people not only survive, but also thrive. Despite this complex goal, the organizing principles of rehabilitation still rely on biomedicine to construct disability as a problem of impaired bodies. Rehabilitation professionals are committed to helping to enhance people's lives, but many struggle with how to do so. The most comprehensive textbook available on therapeutic modalities in rehabilitation—enhanced by a full-color presentation and numerous case studies. This practically oriented guide presents the basic science and current best available evidence for each type of therapeutic modality used in physical rehabilitation. Here, clinicians will find the information needed to determine which modality will be most effective in a given situation to achieve optimal patient outcomes. Each chapter examines the physiologic basis for use, clinical applications, specific techniques of application through the use of related laboratory activities, and relevant individual case studies for each therapeutic modality. Therapeutic Modalities in Rehabilitation, Sixth Edition is divided into six parts: Part I: Foundations of Therapeutic Modalities examines the scientific basis for using therapeutic modalities, classifies the modalities according to the type of energy each uses, and includes guidelines for selecting the most appropriate modalities for managing pain and for use in different phases of the healing process. Part II: Electrical Energy Modalities discusses the principles of electricity, components of electrical and electrotherapeutic currents, treatment parameters, physiological responses to electrical current, iontophoresis, and biofeedback. Part III: Thermal Energy Modalities focuses on modalities which produce a change in tissue temperatures through conduction and convection including thermotherapy and cryotherapy. Part IV: Sound Energy Modalities covers modalities that utilize acoustic energy to produce a therapeutic effect, including therapeutic ultrasound and extracorporeal shockwave therapy. Biologic effects and clinical applications are also discussed. Part V: Electromagnetic Energy Modalities examines diathermy, as well as photobiomodulation (light therapy) treatment techniques and protocols. Part VI:

Mechanical Energy Modalities includes chapters on traction, intermittent pneumatic compression, therapeutic massage and vibration. Presented in full color, the text is enhanced by valuable learning aids, including chapter objectives and summaries, figures and tables, clinical decision-making exercises, review questions, instructional videos, a glossary of key terms in each chapter, up-to-date references, case studies, lab activities, and appendices. Learn how to select and apply physical agents to optimize patient outcomes! Physical Agents in Rehabilitation, 6th Edition provides evidence-based guidance for safe and effective use of agents such as heat and cold, lasers and light, ultrasound, electrotherapy, shock waves, hydrotherapy, traction, and compression. It makes clinical decision making easier with clear explanations of the scientific theory and physiology underlying each agent, and also describes current research and rationales for treatment recommendations. From physical therapist and educator Michelle H. Cameron and a team of expert contributors, this market-leading book includes access to the entire text as a fully searchable eBook. Comprehensive coverage of all physical agents including mechanisms, clinical effects, and application techniques for thermal agents, electrical currents, electromagnetic agents, and mechanical agents. UNIQUE! Step-by-step, illustrated Application Techniques boxes guide you in carrying out effective treatment options. Updated Electrical Stimulation, Ultrasound, and Laser Light Handbook is included in the eBook as a quick reference to use in the clinic. UNIQUE! Find the Evidence tables make it easy to find up-to-date, patient-specific evidence using the PICO (Patient, Intervention, Comparison, Outcome) framework. Research references throughout the book, focused on high-quality evidence. Updated review questions and answers help you master the material. NEW! Shock Wave Therapy chapter covers the principles, evidence base, and practical guidance for using this newly available physical agent. NEW! Updated Lasers, Light and Photobiomodulation chapter adds over 100 new references and more specific guidance for selecting parameters for clinical application. NEW! Enhanced eBook version – included with print purchase – allows access to the entire, fully searchable text, along with figures and references from the book, on a variety of devices. Market includes physical therapists, physical therapy and occupational therapy students State-of-the-art images illustrate the injury and healing process Includes a suggested treatment section for each injury listed Highly visual: 330 illustrations Covers radiography, CT, MRI, and ultrasound from the perspective of the therapist Covering the full range of rehabilitation research with a clear, easy-to-understand approach, this resource will help you analyze and apply research to practice. Rehabilitation Research: Principles and Applications examines traditional experimental designs as well as nonexperimental and emerging approaches, including qualitative research, single-system design, outcomes research, and survey research. Clinical case studies and references will enhance your skills as a scientist-practitioner. Written by noted educators Russell Carter and Jay Lubinsky, this book emphasizes evidence-based practice within physical therapy, occupational therapy, and other rehabilitation professions. Discipline-specific examples are drawn from three major fields: physical therapy, occupational therapy, and speech-language pathology. Unique! Coverage of non-experimental research includes chapters on clinical case reports and qualitative research,

so you can understand a wide range of research methods and when it is most appropriate to use each type. Expanded Single-Subject Design chapter provides a more thorough explanation and examples of multiple baselines, alternating treatments, and interactions -- designs that can be use in everyday clinical practice. Finding Research Literature chapter includes step-by-step descriptions of literature searches within different rehab professions. Student resources on a companion Evolve website allow you to review important concepts with exercises and discussion questions, research article analyses, and a downloadable spreadsheet. Unique! New Evidence-Based Practice chapter provides an overview of the important concepts of EBP and the WHO model of health and disease. Discussion questions on the companion Evolve website provide you with ideas for further study. Unique! Research article analyses on Evolve provide more in-depth analysis and demonstrate the writing style you should employ. New authors Russell Carter and Jay Lubinsky bring an interdisciplinary focus and a stronger emphasis on evidence-based practice. This book clearly explains when and how different rehabilitation techniques should be applied in the aging patient, thereby enabling readers to identify and apply those rehabilitation strategies that will maximize quality of life and functional independence in individual cases. It is specifically designed for ease of consultation and rapid retrieval of the information most relevant to clinical practice. Prominence is given to the benefits of a multidisciplinary approach to rehabilitation, with discussion of a very wide range of aspects of rehabilitation in different disease settings. The breadth of coverage is illustrated by the attention paid to less commonly addressed topics such as visual and hearing rehabilitation, the role of robotics and 3D imaging techniques, variations in approach among health care systems, and rehabilitation in end-of-life care. The authors are international academic experts in their fields, guaranteeing a high scientific standard throughout. This manual will be an invaluable tool and source of knowledge for geriatricians and psychiatrists but will also appeal to a wider range of clinicians, practitioners, and students. Focusing on the history of one medical field—rehabilitation medicine—this book provides the first systematic analysis of the underlying forces that shape medical specialization, challenging traditional explanations of occupational specialization. Our ethnic and diverse populations have varying needs when it comes to rehabilitative health care. This resource, geared to the future health practitioner, details cross-cultural competence in occupational therapy. This book provides a foundation for understanding the cultural changes and forces existing in the United States today and how to integrate those changes and forces into practice. It will help the future practitioner develop an understanding and appreciation for culture and its impact on rehabilitation. Real life case studies bring concepts to life. Additionally, each chapter features a highlight box profiling an individual health care consumer from a specific culture or ethnicity. Rehabilitation students and professionals. " Coauthor of the first edition, Shirley P. Starling..." The most comprehensive physical therapy text available on the topic, Orthotics & Prosthetics in Rehabilitation, 3rd Edition is your one-stop resource for clinically relevant rehabilitation information. Evidence-based coverage offers essential guidelines on orthotic/prosthetic prescription, pre- and post-intervention gait assessment and outcome measurement, and working with special populations.

Comprehensive coverage addresses rehabilitation in a variety of environments, including acute care, long-term care and home health care, and outpatient settings. Authoritative information from the Guide to Physical Therapist Practice, 2nd Edition is incorporated throughout. World Health Organization (WHO) International Classification of Function model provides consistent language and an international standard to describe and measure health and disability from a biopsychosocial perspective. Case studies present real-life scenarios that demonstrate how key concepts apply to clinical decision making and evidence-based practice. A visually appealing 2-color design and a wealth of tables and boxes highlight vital information for quick reference and ease of use. Updated photos and illustrations reflect current clinical practice. Updated chapter on Assessment of Gait focuses on clinically useful outcome measures. Updated chapter on Motor Control and Motor Learning incorporates new insights into neuroplasticity and functional recovery. NEW! Integrated chapter on Lower Extremity Orthoses assists in clinical decision making about the best options for your patients. NEW! Chapter on Athletics after Amputation explores advanced training and athletics, including running and athletic competition to enhance the quality of life for persons with amputation. NEW! Chapter on the High Risk Foot and Wound Healing helps you recognize, treat, and manage wounds for the proper fit and management of the patient. NEW! Chapter on Advanced Prosthetic Rehabilitation provides more thorough rehabilitation methods beyond the early care of persons learning to use their prostheses. Discover how to use evidence to improve your practice! Providing thorough, contemporary coverage of the full range of rehabilitation research with a clear, easy-to-understand approach, Rehabilitation Research: Principles and Applications, 6th Edition helps you learn to analyze and apply research to practice. It examines traditional experimental designs, as well as nonexperimental and emerging approaches, including qualitative research, single-system designs, epidemiology, and outcomes research. Ideal for students and practitioners in physical therapy, occupational therapy, and speech-language pathology, this user-friendly resource emphasizes evidence-based practice and your development as a true scientist-practitioner. Evidence-Based Practice chapter provides an overview of the important concepts of EBP and the World Health Organization model of health and disease. Interdisciplinary author team consisting of a PT and an SLP brings an interdisciplinary focus and a stronger emphasis on evidence-based practice. Discipline-specific examples are drawn from three major fields: physical therapy, occupational therapy, and communication sciences and disorders. Coverage of nonexperimental research includes chapters on clinical case studies and qualitative research, to help students understand a wide range of research methods and when it is most appropriate to use each type. Finding Research Literature chapter includes step-by-step descriptions of literature searches within different rehabilitation professions. UPDATED! Revised evidence-based content throughout provides students and rehabilitation practitioners with the most current information. UPDATED! Coverage of the latest research methods and references ensures content is current and applicable for today's PT, OT, and SLP students. NEW! Analysis and Interpretation of Data from Single Subject Designs chapter. NEW! Content on evaluating the quality of online and open-access journals. Presenting a variety of treatment choices supported by the latest

clinical research, *Physical Agents in Rehabilitation: From Research to Practice*, 4th Edition is your guide to the safe, most effective use of physical agents in your rehabilitation practice. Coverage in this new edition includes the most up-to-date information on thermal agents, ultrasound, electrical currents, hydrotherapy, traction, compression, lasers, and electromagnetic radiation. Straightforward explanations make it easy to integrate physical agents into your patients' overall rehabilitation plans. Comprehensive coverage of all physical agents includes the benefits, correct applications, and issues related to thermal agents, hydrotherapy, traction, compression, ultrasound, electrical currents, and electromagnetic radiation. Clinical case studies help sharpen your decision-making skills regarding important treatment choices and effective applications. Up-to-date, evidence-based practices ensure you are using the best approach supported by research. Contraindications and Precautions boxes explain the safe use and application of physical agents with up-to-date warnings for optimum care paths. Clinical Pearl boxes emphasize the tips and tricks of patient practice. Application techniques in step-by-step, illustrated resource boxes help you provide safe and effective treatments. NEW! Video clips on companion Evolve site demonstrate techniques and procedures described in the text. NEW! Content specific to OTs has been added to the core text including upper extremity cases for all physical agent chapters. NEW! Organization of the text by agent type increases the book's ease of use. NEW! Expanded sections on thermal agents and electrical currents will give students a better understanding of how to use these types of agents in practice. The most comprehensive book on therapeutic modalities A Doody's Core Title! Provides a theoretically based but practically oriented guide to the use of therapeutic modalities. Perfect for the required course in the Physical Therapy curriculum or as a clinical reference, the text features extensive use of case studies, laboratory activities, and a renown illustration program. Print+CourseSmart Assessment in Rehabilitation and Health is the first and only text tailored specifically for both students and established professionals seeking a structured foundation of knowledge of tests and related assessment practices commonly used by professionals in their field. While other textbooks commonly used in this area of study often offer a broader look at assessment practices and theories, *Assessment in Rehabilitation and Health* focuses closely on the standardized and clinical methods of assessment in regards to rehabilitation counseling, communication and speech disorders, occupational therapy, neuropsychology, physiotherapy, and physical medicine. Note to Readers: Publisher does not guarantee quality or access to any included digital components if book is purchased through a third-party seller. Uses an integrated rehabilitation perspective to address career, vocational behavior, employment, and disability related theory and research This highly regarded resource is the only book in rehabilitation counseling to provide comprehensive coverage of vocational behavior and employment theory and intervention techniques as they apply to individuals with disabilities. Scholarly yet practical, the second edition is updated with key information and research, delivering new employment statistics, employment rates, and poverty levels of people with disabilities. Woven throughout this new edition, is the Illinois Work and Well-Being Model, incorporating foundational theories and providing a framework for understanding the critical factors that impact the career development

process. Chapters—written by leaders in the field—are consistently organized for ease of use. Each chapter includes an Overview of Major Constructs followed by Theoretical Foundations; Occupational Assessment, Information and Evaluation; Intervention Strategies; and Population and Settings. Case examples and discussion questions highlight and reinforce application of theories and techniques. New Sample Syllabi, Classroom Activities, PowerPoints, and a Test Bank are included for instructors. An eBook is included with the purchase of the print edition. New to the Second Edition: Provides new employment statistics, employment rates, and poverty levels of people with disabilities Reviews details of the Work Force Innovation Act Integrates the Illinois Work and Well-Being Model throughout as a framework for understanding critical factors impacting the career development process Links with CACREP standards Discusses relevant new legislation New Key Concept Boxes, Chapter Summaries, and Chapter Glossary increase accessibility of the new edition Includes sample syllabi, classroom activities, PowerPoint slides, and test bank Key Features: Addresses contemporary career, vocational behavior, employment, and disability related theory and research from an integrated rehabilitation perspective Written by well-respected practitioners and educators Organized to facilitate instructor flexibility in assigning chapters without losing course continuity Achieve the best functional outcomes for your patients. Here is a practical, step-by-step guide to understanding the treatment process and selecting the most appropriate interventions for your patients. Superbly illustrated, in-depth coverage shows you how to identify functional deficits, determine what treatments are appropriate, and then implement them to achieve the best functional outcome for your patients. Learn through reading, seeing, and doing. Seventeen case studies in the text correspond to seventeen videotaped case studies with voice-over narration online at FADavis.com. These videos show you how practicing therapists interact with their clients in rehabilitation settings...from sample elements of the initial examination through the interventions to the functional outcomes...to make a difference in patients' lives. As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC. Provides an overview of models and theories relevant to rehabilitation, identifying the use of models in practice to facilitate interdisciplinary teamwork and to enable a client-centred approach. The approach is essentially practical, employing case studies and questions for practice to aid the application of the theory to

clinical practice. Presents an innovative family-based approach to rehabilitation counseling that can be put to use immediately! While the family has traditionally been a secondary consideration in rehabilitation, this graduate text presents an innovative approach to rehabilitation counseling that focuses on the family as the center of a person-centered model, rather than as an adjunct to individual counseling. It advocates counseling in the context of community, requiring the recognition of social transaction as the primary focus of all interventions. The book provides the tools and knowledge base to effectively work with the family and within the community, delivering a new inclusive model of care and establishing best practices in research, practice, training, and management. The text examines the rationale for embracing family values in rehabilitation counseling and provides a framework that redefines the relationship between counselor and client in the context of family and community. It describes the community-based rehabilitation model in detail according to the International Classification of Function (ICF) and presents a series of illustrative disability profiles—distilled from systematic reviews of the literature—reflecting this framework. In each case, the impact upon family participation is illustrated and optimal service and support resources are identified. The role and function of the rehabilitation counselor provide the integrative conclusion to each chapter. The book also describes grassroots initiatives, the role of family in community-based rehabilitation in developing countries, family policy across rehabilitation systems, and best practices in research, training, and management. Additionally, the text comes with access to an Instructor's Manual that includes case study discussion questions, classroom activities, and multiple-choice questions. Key Features:

- Describes an innovative family-/community-focused approach to rehabilitation counseling, framed in ICF taxonomy
- Presents a pragmatic model that can be put to use immediately
- Describes an array of family experiences across disability contexts, providing an opportunity to critique current practice through the lens of community-based constructs
- Provides plentiful case studies based on family narratives
- Broadens the scope of practice with service initiatives from around the world
- Includes an Instructor's Manual with case study discussion questions, classroom activities, and multiple-choice questions

A Doody's Core Title 2012 Stroke Recovery and Rehabilitation is the new gold standard comprehensive guide to the management of stroke patients. Beginning with detailed information on risk factors, epidemiology, prevention, and neurophysiology, the book details the acute and long-term treatment of all stroke-related impairments and complications. Additional sections discuss psychological issues, outcomes, community reintegration, and new research. Written by dozens of acknowledged leaders in the field, and containing hundreds of tables, graphs, and photographic images, Stroke Recovery and Rehabilitation features:

- The first full-length discussion of the most commonly-encountered component of neurorehabilitation
- Multi-specialty coverage of issues in rehabilitation, neurology, PT, OT, speech therapy, and nursing
- Focus on therapeutic management of stroke related impairments and complications
- An international perspective from dozens of foremost authorities on stroke
- Cutting edge, practical information on new developments and research trends

Stroke Recovery and Rehabilitation is a valuable reference for clinicians and academics in

rehabilitation and neurology, and professionals in all disciplines who serve the needs of stroke survivors. This book will help all health professionals involved in the rehabilitation of older people to provide their patients with the highest possible quality of life and autonomy. Expanded and rewritten by a diverse team of authors, the text is suitable for doctors in all specialties that see older patients, as well as nurses, physiotherapists, occupational therapists, psychologists, dietitians, speech and language therapists/pathologists, physician associates/assistants, healthcare assistants, and many others including patients, family members and students. The book is written in an accessible, no-jargon style and provides a patient-centred perspective on recent advances in the field of rehabilitation – an increasingly important aspect of care for older people. Clear explanations of relevant concepts: ageing, frailty, comprehensive assessment, rehabilitation Broad coverage of all aspects of rehabilitation including different settings Explanations of input from multiple health professionals Problem-based section that highlights solutions to common issues during rehabilitation Specialty-specific areas of rehabilitation such as stroke rehabilitation, cancer rehabilitation, post-operative rehabilitation, trauma, rehabilitation in the community Practical section explaining how to plan discharge safely, run a care planning meeting, organize home supports, continue rehabilitation at home Evidence-based but accessible writing, complemented by practical clinical wisdom Aimed at a broader audience – applicable to all health professionals who see older patients Resources for patients and their caregivers Multiple-choice questions to test knowledge With straightforward, in-depth coverage of the use of physical agents to improve patient outcomes, *Physical Agents in Rehabilitation: An Evidence-Based Approach to Practice, 5th Edition* reflects how physical agents and modalities are being discussed in the classroom. This new edition brings the ideal balance of evidence and practical instruction to the learning and practice of physical agents in rehabilitation. Comprehensive coverage of all physical agents includes the mechanisms, clinical effects, and application techniques for thermal agents, ultrasound, electrical currents, electromagnetic radiation, hydrotherapy, traction, and compression. Plus, each chapter includes a scientific rationale and step-by-step instructions in the use of the agent(s), as well as up-to-date research support and new Find the Evidence tables. The new edition is supported with electronic ancillaries including review questions for students, PowerPoints*, and links to all references on Medline. Comprehensive coverage of all physical agents includes the mechanisms, clinical effects, and application techniques for thermal agents, ultrasound, electrical currents, electromagnetic radiation, hydrotherapy, traction, and compression. Find the Evidence tables guide the reader in finding up-to-date, patient-specific evidence using the PICO framework. UNIQUE Step-by-step illustrated application techniques boxes guide you in reproducing effective treatment options. Electronic ancillaries *Electrical Stimulation, Ultrasound & Laser Light Handbook* helps you to understand the material and can be printed out for quick reference to use in the clinical setting. NEW! Chapter on biofeedback complements the coverage of powered devices used in rehabilitation. UNIQUE! New Find the Evidence tables guide the reader in finding up-to-date, patient-specific evidence using the PICO framework. A theory-plus-practice guide with new therapeutic strategies and treatment models, case

examples, and photographs. Discusses balanced standing, balanced sitting, reaching, manipulation, walking, and other basic skills. Shows how to identify short-term goals, provide instruction, practice, and feedback. Presenting a variety of treatment choices supported by the latest clinical research, *Physical Agents in Rehabilitation: From Research to Practice*, 4th Edition is your guide to the safe, most effective use of physical agents in your rehabilitation practice. Coverage in this new edition includes the most up-to-date information on thermal agents, ultrasound, electrical currents, hydrotherapy, traction, compression, lasers, and electromagnetic radiation. Straightforward explanations make it easy to integrate physical agents into your patients' overall rehabilitation plans. Comprehensive coverage of all physical agents includes the benefits, correct applications, and issues related to thermal agents, hydrotherapy, traction, compression, ultrasound, electrical currents, and electromagnetic radiation. Clinical case studies help sharpen your decision-making skills regarding important treatment choices and effective applications. Up-to-date, evidence-based practices ensure you are using the best approach supported by research. Contraindications and Precautions boxes explain the safe use and application of physical agents with up-to-date warnings for optimum care paths. Clinical Pearl boxes emphasize the tips and tricks of patient practice. Application techniques in step-by-step, illustrated resource boxes help you provide safe and effective treatments. NEW! Video clips on companion Evolve site demonstrate techniques and procedures described in the text. NEW! Content specific to OTs has been added to the core text including upper extremity cases for all physical agent chapters. NEW! Organization of the text by agent type increases the book's ease of use. NEW! Expanded sections on thermal agents and electrical currents will give students a better understanding of how to use these types of agents in practice. Ensure confident clinical decisions and maximum reimbursement in a variety of practice settings such as acute care, outpatient, home care, and nursing homes with the only systematic approach to documentation for rehabilitation professionals! Revised and expanded, this hands-on textbook/workbook provides a unique framework for maintaining evidence of treatment progress and patient outcomes with a clear, logical progression. Extensive examples and exercises in each chapter reinforce concepts and encourage you to apply what you've learned to realistic practice scenarios. UNIQUE! Combination textbook/workbook format reinforces your understanding and tests your ability to apply concepts through practice exercises. UNIQUE! Systematic approach to documenting functional outcomes provides a practical framework for success in numerous practice settings. Case studies show you how to format goals through realistic client examples. Practice exercises provide valuable experience applying concepts to common clinical problems. Four NEW chapters address additional aspects of documentation that rehabilitation professionals will encounter in practice: Legal aspects of documentation Documentation in pediatrics Payment policy and coding Computerized documentation "MS is always in the back of your mind. If there is something you want to do, you always wonder if the MS will allow you to do it." —Darlene, living with MS for 22 years Living with multiple sclerosis (MS) is challenging and multidimensional. MS pervades all aspects of life: one's body becomes unpredictable and unreliable, one's identity and sense of self are tested, and relationships with others often change. MS

symptoms emerge and remit; limitations evolve and progress. MS rehabilitation is an active, person-centered, and goal-oriented process embedded within a respectful and collaborative partnership between the person with MS and the members of his or her rehabilitation treatment team. Using the International Classification of Functioning, Disability and Health (ICF) as a guiding framework, *Multiple Sclerosis Rehabilitation: From Impairment to Participation* provides a comprehensive and evidence-based resource to inform and guide clinical reasoning and decision making during each phase of the MS rehabilitation process, from initial referral to post-discharge follow-up. With an emphasis on the application of evidence throughout the entire MS rehabilitation process, the specific objectives of the book are to increase the understanding of: The nature and impact of specific impairments, activity limitations, and participation restrictions experienced by people with MS How to select and use valid, reliable, and relevant assessment tools to inform the development of rehabilitation goals and intervention plans, and to evaluate outcomes This book provides information about the nature and impact of MS on the daily lives of people living with the disease, describes evidence-based assessment processes and instruments, and summarizes current knowledge that can inform goal setting and intervention planning. Thoughtful application of the knowledge contained in this book will inform and guide rehabilitation providers to work collaboratively with people with MS and enable them to achieve their goals for participation in everyday life. Provides support for how physical agent modalities are discussed in the classroom and used in clinical rehabilitation practice to improve patient outcomes. This new edition brings the ideal balance of evidence and practical instruction to the learning and practice of physical agents in rehabilitation.
