This three-volume work presents the proceedings from the 19th International Ship and Offshore Structures Congress held in Cascais, Portugal on 7th to 10th September 2015. The International Ship and Offshore Structures Congress (ISSC) is a forum for the exchange of information by experts undertaking and applying marine structural research. The aim of The IMF's principal statistical publication, International Financial Statistics (IFS) Online, is the standard source of international statistics on all aspects of international and domestic finance. For most countries, IFS Online reports data on balance of payments, international investment position, international liquidity, monetary and financial statistics, exchange rates, interest rates, prices, production, government accounts, national accounts, and population. Updated monthly. Cat Island, just off the Mississippi Gulf Coast shoreline, has been home to some of the most dramatic events and remarkable stories in the nation's history. While some of these stories are fact,

others are colorful fables passed down through the ages with such conviction they have become true in the hearts and minds of many. Between fact and fiction is the undeniable reality: Cat Island is one of the most historically significant landmarks on the Mississippi Gulf Coast. Featuring over 160 black-and-white photographs by Jason Taylor and a foreword by Mississippi's Secretary of State Delbert Hosemann, John Cuevas's *Discovering Cat Island* guides readers through Cat Island with stories and histories of twenty-nine sites--both real and imagined--of the legendary barrier island. Originally owned by the Cuevas family as part of a Spanish land grant to Juan de Cuevas in 1781, Cat Island boasts a colorful history that includes events related to the notorious pirate Jean Lafitte and the outlaw James Copeland, both of whom were thought to have buried their stolen treasure somewhere on the island; the Battle of New Orleans; and the War of 1812. The island served as one of the staging areas for the Seminole forced to abandon their homes and take part in the Trail of Tears. In the twentieth century, the island was a convenient transfer point for gangsters and local bootleggers shipping booze during Prohibition before becoming a US military training camp site during World War II. In 1988, Cat Island became the location of the first oil drilling ever in the Mississippi Sound and in 2010 was one of the islands devastated by the BP Deepwater Horizon oil spill.

Effective sustainability communication can deliver business value. Get it wrong, however, and the reputational damage will be costly. Stakeholders, and the general public as well as activists, are unforgiving of companies whose products, services, business practices or culture fall short of their socially responsible rhetoric. Based on close to one hundred in-depth interviews with leading experts, Christian Conrad and Marjorie Thompson's *The New Brand Spirit* helps corporate communications and marketing professionals tackle this conundrum by providing a first-hand view of eight distinct and relevant stakeholder perspectives. Nineteen comprehensive and well-researched best practice cases from sustainability leaders like IBM, Unilever, Marks & Spencer and Puma will inspire all those tasked with communicating sustainability with practical and applicable tools and lessons learned. The result is a book that will enable senior executives, corporate communication professionals and brand managers to decide when, to whom and how to communicate sustainability related messages - and when not to. Housing was at the heart of the financial collapse, and our economy is now precariously reliant on the housing market. In this groundbreaking new book, Danny Dorling argues that housing is the defining issue of our times. Tracing how we got to our current crisis and

how housing has come to reflect class and wealth in Britain, *All That Is Solid* radically shows that the solution to our problems - rising homelessness, a generation priced out of home ownership - is not, as is widely assumed, building more homes. Inequality, he argues, is what we really need to overcome. This series helps countries to identify and overcome binding constraints to achieving higher levels of well-being and more equitable and sustainable growth. The Development Pathways are based on Multi-dimensional Country Reviews, which take into account policy interactions and the ... This collection raises incisive questions about the links between the postcolonial carceral system, which thrived in Ireland after 1922, and larger questions of gender, sexuality, identity, class, race and religion. This kind of intersectional history is vital not only in looking back but, in looking forward, to identify the ways in which structural callousness still marks Irish society. Essays include historical analysis of the ways in which women and children were incarcerated in residential institutions, Ireland's Direct Provision system, the policing of female bodily autonomy through legislation on prostitution and abortion, in addition to the legacies of the Magdalen laundries. This collection also considers how artistic practice and commemoration have acted as vital interventions in social attitudes and public knowledge, helping to create knowledge and re-shape social attitudes towards this history. A human right to higher education was included in the International Covenant on Economic Social and Cultural Rights (ICESCR), which came into force in 1976. Yet the world has changed significantly since the ICESCR was drafted. State legislation and policies have generally followed a neoliberal trajectory, shifting the perception of higher education from being a public good to being a commodity able to be bought and sold. This model has been criticized, particularly because it generally reinforces social inequality. At the same time, attaining higher education has become more important than ever before. Higher education is a prerequisite for many jobs and those who have attained higher education enjoy improved life circumstances. This book seeks to determine: Is there still a place for the human right to higher education in the current international context? In seeking to answer this question, this book compares and contrasts two general theoretical models that are used to frame higher education policy: the market-based approach and the human rights-based approach. In the process, it contributes to an understanding of the likely effectiveness of market-based versus human rights-based approaches to higher education provision in terms of teaching and learning. This understanding should enable the development of more improved,

sophisticated, and ultimately successful higher education policies. This book contends that a human rights-based approach to higher education policy is more likely to enable the achievement of higher education purposes than a market-based approach. In reaching this conclusion, the book identifies and addresses some strategic considerations of relevance for advocates of a human rights-based approach in this context. Sustainable Public Food Procurement (PFP) represents a key game changer for food systems transformation. It can influence both food consumption and food production patterns. It can deliver multiple social, economic and environmental benefits towards sustainable food systems for healthy diets. This publication aims to contribute to the improved understanding, dissemination and use of PFP as a development tool in particular in the case of school meals programmes. In this Volume 2, researchers, policymakers and development partners can find extensive evidence of the instruments, enablers and barriers for PFP implementation. It also provides case studies with local, regional and national experiences from Africa, Asia, Europe and North and South America. Volume 1 of this publication, available at <https://doi.org/10.4060/cb7960en>, presents further analysis on how PFP can be used as a development tool and deliver multiple benefits for multiple beneficiaries. It argues that PFP can provide a market for local and smallholder farmers, promote the conservation and sustainable use of agrobiodiversity, and improve the nutrition and health of children and communities. The volume attempts to gauge and analyse the level of denial and deprivation faced by Indian Muslims by evaluating their status after a gap of several years of Sachar Committee (2006) and Rangnath Mishra Commission (2007) Reports. It presents and discusses the current conditions with respect to outcome indicators such as population, education, economy, poverty, unemployment, consumption level, availability of bank loans, infrastructure and civic facilities and representation in government employment. By placing facts in perspective, it also discusses community-specific issues such as use of Urdu, madrasa education and Waqf. In the post-Sachar era, governments started many schemes to improve the condition of Muslims whose reach and impact is assessed with the help of latest data. It presents the social structure of Muslims, presence of OBCs and Dalits and suggests a practical pattern for reservation. It follows up the process of implementation of

recommendations of these reports and highlights how the governments adopted tokenism, attempted to implement minor recommendations and shied away from major ones. The volume highlights the lopsided attitude of the previous UPA governments, hostile attitude of the present NDA regime and accelerated marginalization of Muslims in today's scenario due to open discrimination, mob-violence, lynching and hate crimes in the name of various communal issues. The UN Charter mandates the global organization to seek four noble aspirations: international peace and security, rule of law among nations, human rights for all people, and social progress through development. On environmental issues,

however, the UN has understood its charge much more narrowly: it works for "better law between nations" and "better development within them." This approach treats peace and human rights as unrelated to the world's environmental problems, despite a large body of evidence to the contrary. In this path-breaking book, a leading scholar of global environmental governance critiques the UN's failure to use its mandates on human rights and peace as tools in its environmental work. The book traces the institutionalization and performance of the UN's "law and development" framework and the parallel silence on rights and peace. Despite some important gains, the traditional approach is failing for some of world's most pressing and contentious environmental challenges, and has lost most of the political momentum it once enjoyed. The disastrous "Rio+20" Summit laid this fact bare, as assembled governments failed to find meaningful agreement on any of the most pressing issues. By not treating the environment as a human rights issue, the UN fails to mobilize powerful tools for accountability in the face of pollution and resource degradation. And by ignoring the conflict potential around natural resources and environmental protection efforts, the UN misses opportunities to transform the destructive cycle of violence and vulnerability around resource extraction. The book traces the history of the UN's traditional approach, maps its increasingly apparent limits, and suggests needed reforms. Detailed case histories for each of the four mandate domains flag several promising initiatives, while identifying barriers to transformation. Its core implication: the UN's environmental efforts require not just a managerial reorganization but a conceptual revolution—one that brings to bear the full force of the organization's mandate. Peacebuilding, conflict sensitivity, rights-based frameworks, and accountability mechanisms can be used to enhance the UN's environmental effectiveness and legitimacy. A practical, hands-on guide providing editors and journalists with the tools necessary to ensure that published material is accurate, readable, and complete. A remarkable debut by one of America's premier young reporters on financial corruption, Casey Michel's *American Kleptocracy* offers an explosive investigation into how the United States of America built the largest illicit offshore finance system the world has ever known. "An indefatigable young American journalist who has virtually cornered the international kleptocracy beat on the US end of the black aquifer." —The Los Angeles Review of Books For years, one country has acted as the greatest offshore haven in the world, attracting hundreds of billions of dollars in illicit finance tied directly to corrupt regimes, extremist networks,

and the worst the world has to offer. But it hasn't been the sand-splattered Caribbean islands, or even traditional financial secrecy havens like Switzerland or Panama, that have come to dominate the offshoring world. Instead, the country profiting the most also happens to be the one that still claims to be the moral leader of the free world, and the one that claims to be leading the fight against the crooked and the corrupt: the USA. American Kleptocracy examines just how the United States' implosion into a center of global offshoring took place: how states like Delaware and Nevada perfected the art of the anonymous shell company, and how post-9/11 reformers watched their success usher in a new flood of illicit finance directly into the U.S.; how African despots and post-Soviet oligarchs came to dominate American coastlines, American industries, and entire cities and small towns across the American Midwest; how Nazi-era lobbyists birthed an entire industry of spin-men whitewashing trans-national crooks and despots, and how dirty money has now begun infiltrating America's universities and think tanks and cultural centers; and how those on the front-line are trying to restore America's legacy of anti-corruption leadership—and finally end this reign of American kleptocracy. What is the effect of revolutions on legal systems? What role do constitutions play in legitimating regimes? How do constitutions and revolutions converge or clash? Taking the Arab Spring as its case study, this book explores the role of law and constitutions during societal upheavals, and critically evaluates the different trajectories they could follow in a revolutionary setting. The book urges a rethinking of major categories in political, legal, and constitutional theory in light of the Arab Spring. The book is a novel and comprehensive examination of the constitutional order that preceded and followed the Arab Spring in Egypt, Tunisia, Libya, Morocco, Jordan, Algeria, Oman, and Bahrain. It also provides the first thorough discussion of the trials of former regime officials in Egypt and Tunisia. Drawing on a wide range of primary sources, including an in-depth analysis of recent court rulings in several Arab countries, the book illustrates the contradictory roles of law and constitutions. The book also contrasts the Arab Spring with other revolutionary situations and demonstrates how the Arab Spring provides a laboratory for examining scholarly ideas about revolutions, legitimacy, legality, continuity, popular sovereignty, and constituent power. This book demonstrates the positive impact of using film and audiovisual material in the language classroom. The chapters are evidence-based and address different levels and contexts of learning around the world. They demonstrate the benefits of using moving images and films to develop intercultural

awareness and promote multilingualism, and suggest Audiovisual Translation (AVT) activities and projects to enhance language learning. The book will be a valuable continuing professional development resource for language teachers and those involved in curriculum development, as well as bringing the latest research, theory and pedagogical techniques to teacher training courses. Recent research suggests that Black and minority ethnic (BME) academics remain underrepresented, particularly at senior levels in higher education, and tend to be concentrated in new, post-1992 universities. This book provides an original comparative study of BME academics in both the UK and the USA, two different yet similar cultural and political climates, considering issues of inequality, difference and identity in the Academy. Presenting a distinctive and engaging voice, the book discusses the complexity of race, gender and identity in the context of higher education, an area that continues to appear to be dominated by white, middle class values and perspectives. Chapters offer an up-to-date commentary on the purpose, failures and potential of research on race, gender and identity, and its place within contemporary education and sociology. The book broadens the understanding of educational research, considering both sociological and cultural discourse, as well as examining racialized and gendered identities from a theoretical and analytical standpoint. The book closes by offering suggestions for viable policy shifts in this area. The Experiences of Black and Minority Ethnic Academics will be of key interest to researchers, academics and postgraduate students in the field of education, as well as sociologists wanting to learn more about black and minority academics in higher education. Written by Peter Mattock, *Conceptual Maths: Teaching 'about' (rather than just 'how to do') mathematics in schools* aims to empower teachers to support students on a comprehensive and coherent journey through school mathematics. Showcasing the best models, metaphors and representations, it provides excellent examples, explanations and exercises that can be used across the curriculum. Concepts are at the heart of the study of mathematics. They are the ideas that remain constant whenever they are encountered, but which combine and build upon each other to create the mathematical universe. It is the structure of each concept that gives rise to the procedures that are used in calculation and problem-solving - and, by learning about these structures, a learner can make sense of how different processes work and use them flexibly as need demands. In his first book, *Visible Maths*, Peter Mattock focused on the use of representations and manipulatives as images and tools and how this can provide a window into some of these mathematical

structures. His aim in *Conceptual Maths* is to go deeper, beyond the procedures, and to shed greater light on the structures of the subject's different concepts. The book explores how a variety of visual tools and techniques can be used in the classroom to deepen pupils' understanding of mathematical structures, concepts and operations, including: number; addition and subtraction; multiplication and multiples; division and factors; proportionality; functionality; measures; accuracy; probability; shape and transformation; and vectors, among many others. In so doing, Peter equips teachers with the confidence and practical know-how to help learners assimilate knowledge of mathematical concepts into their schema and take their learning to the next level. Containing numerous full-colour diagrams and models to illustrate the conceptual takeaways and teaching techniques discussed, *Conceptual Maths* also includes a glossary covering the key mathematical terms. Suitable for teachers of maths in primary, secondary and post-16 settings

Derived from the renowned multi-volume International Encyclopaedia of Laws, this monograph provides a survey and analysis of the rules concerning Regulation (EU) No 608/2013 Concerning Customs Enforcement of Intellectual Property Rights. It covers every type of intellectual property right in depth – copyright and neighbouring rights, patents, utility models, trademarks, trade names, industrial designs, plant variety protection, chip protection, trade secrets, and confidential information. Particular attention is paid throughout to recent developments and trends. The analysis approaches each right in terms of its sources in law and in legislation, and proceeds to such legal issues as subject matter of protection, conditions of protection, ownership, transfer of rights, licences, scope of exclusive

rights, limitations, exemptions, duration of protection, infringement, available remedies, and overlapping with other intellectual property rights. The book provides a clear overview of intellectual property legislation and policy, and at the same time offers practical guidance on which sound preliminary decisions may be based. Lawyers representing parties with interests in Regulation (EU) No 608/2013 Concerning Customs Enforcement of Intellectual Property Rights will welcome this very useful guide, and academics and researchers will appreciate its value in the study of comparative intellectual property law. Natural resources, oil and gas in particular, comprise the country's single largest revenue-earner but the 170m person economy also has seen significant activity in recent years into the industrial, financial, telecoms and – as of 2013 – power sectors. Hydrocarbons reserves have traditionally attracted the vast majority of domestic and foreign investment in Nigeria. Oil production capacity has remained at roughly 2.5m barrels per day (bpd) since the start of 2000, although output fell to 2.2m bpd on average in 2012. Still, the country has long operated below its true potential and government efforts in recent years have sought to increase local value addition, by boosting refining capacity and minimising theft and bunkering. The country's banking sector has been through a significant shake-up as well, resulting in a far healthier and more robust financial industry, while reforms in the telecoms and agricultural sectors have strengthened medium-term prospects. In recent years, there has been an increasing demand for, and rapid development in, the learning and teaching of Asian languages as a foreign language throughout the world. Many governments recognize that Asian languages are of strategic economic importance, and thus they are now offered as a foreign language by a great number of schools and higher education institutions. This book contains chapters written by different authors from several countries on key issues and problems in the teaching of the Chinese, Russian, Farsi, Japanese and Malaysian languages, and some comparative studies. The contributors here explore future directions in the teaching of Asian languages in the 21st

century. The ten chapters of the book have been prepared by the authors using the scholarly papers they presented at the Second International Symposium on Asian Languages and Literatures (ADES), which was held on 3–4 May 2012 at Erciyes University, Kayseri, Turkey, under the title of “Teaching of Asian Languages in the 21st Century”. Soon after film came into existence, the term epic was used to describe productions that were lengthy, spectacular, live with action, and often filmed in exotic locales with large casts and staggering budgets. The effort and extravagance needed to mount an epic film paid off handsomely at the box office, for the genre became an immediate favorite with audiences. Epic films survived the tribulations of two world wars and the Depression and have retained the basic characteristics of size and glamour for more than a hundred years. Length was, and still is, one of the traits of the epic, though monolithic three- to four-hour spectacles like *Gone with the Wind* (1939) and *Lawrence of Arabia* (1962) have been replaced today by such franchises as the Harry Potter films and the Lord of the Rings trilogy. Although the form has evolved during many decades of existence, its central elements have been retained, refined, and modernized to suit the tastes of every new generation. The *Encyclopedia of Epic Films* identifies, describes, and analyzes those films that meet the criteria of the epic—sweeping drama, panoramic landscapes, lengthy adventure sequences, and, in many cases, casts of thousands. This volume looks at the wide variety of epics produced over the last century—from the silent spectacles of D. W. Griffith and biblical melodramas of Cecil B. DeMille to the historical dramas of David Lean and rollercoaster thrillers of Steven Spielberg. Each entry contains: Major personnel behind the camera, including directors and screenwriters Cast and character listings Plot summary Analysis Academy Award wins and nominations DVD and Blu-ray availability Resources for further study This volume also includes appendixes of foreign epics, superhero spectaculars, and epics produced for television, along with a list of all the directors in the book. Despite a lack of overall critical recognition and respect as a genre, the epic remains a favorite of audiences, and this book pays homage to a form of mass entertainment that continues to fill movie theaters. The *Encyclopedia of Epic Films* will be of interest to academics and scholars, as well as any fan of films made on a grand scale. In May 2010, Labour suffered one of its worst ever election defeats. A few months later it chose Ed Miliband as its new leader. His task? To win back power after just one term in opposition - a tall order given how many voters had come to blame Labour for the economic mess the country was

in, and to see the party as a soft-touch when it came to immigration and welfare. Even those who were more sympathetic had their doubts. Was Ed Miliband really leadership material? Would he be able to overcome defeating his elder brother to get to the top? Would he have to do as he was told by the trade union leaders who had helped him win? Could he resolve the tensions between Blairites and Brownites, Blue Labour and New Labour? Might his desire to keep his colleagues united mean Labour stayed stuck in its comfort zone? Would he, in seeking to break from the party's recent past, take it too far to the left? Could he offer the electorate something really radical in 2015 or would he instead choose something safer but ultimately less inspiring? And what should twenty-first social democracy look like now that the money had run out? This book, by one of the country's foremost experts on party politics, seeks to answer all those questions and, in the run up to the 2015 general election, to ask one more: will Ed Miliband's five year mission turn out to be 'mission impossible'? The fifth edition of this renowned work charts the progress towards the goal of worldwide abolition of the death penalty internationally. The authors make a powerful case for abolition, regarding capital punishment as cruel, inhuman, and degrading. The Routledge Companion to Digital Humanities and Art History offers a broad survey of cutting-edge intersections between digital technologies and the study of art history, museum practices, and cultural heritage. The volume focuses not only on new computational tools that have been developed for the study of artworks and their histories but also debates the disciplinary opportunities and challenges that have emerged in response to the use of digital resources and methodologies. Chapters cover a wide range of technical and conceptual themes that define the current state of the field and outline strategies for future development. This book offers a timely perspective on trans-disciplinary developments that are reshaping art historical research, conservation, and teaching. This book will be of interest to scholars in art history, historical theory, method and historiography, and research methods in education. Lesson planning is a requirement of every teacher. Police forces pay widely varying prices for very similar items, which means money is being wasted. The price paid for such basic items as standard-issue boots can vary from £25 to £114, or £14 to £43 for handcuffs. This is even the case where items are identical. It cannot be right that prices paid for the same type of high-visibility jacket varied by as much as 33%. With central funding being cut, police forces must ensure they get best value for money from procurement so that they can focus resources on fighting crime. Forces can make big savings through bulk-buying of items, but have been unable to agree on the most simple things, like how many pockets they should have on their uniforms. The Department cannot persuade enough individual forces to cooperate with its attempts to introduce more centralised procurement, in part because forces are sceptical about the commercial competence of procurement officers working at the centre. National contracts with suppliers are not used by enough forces and do not cover many basic goods and services. Forces' use of the new, online police procurement 'hub' is also woefully below the Home Office's expectations. By 2013, a miniscule 2% of items were being bought through this central hub, against a target of 80% by the end of this Parliament. Police and Crime Commissioners have authority over local spending but, as the Department remains accountable for public money voted by Parliament, it cannot step back from value for money issues

The Routledge

History of American Sport provides the first comprehensive overview of historical research in American sport from the early Colonial period to the present day. Considering sport through innovative themes and topics such as the business of sport, material culture and sport, the political uses of sport, and gender and sport, this text offers an interdisciplinary analysis of American leisure. Rather than moving chronologically through American history or considering the historical origins of each sport, these topics are dealt with organically within thematic chapters, emphasizing the influence of sport on American society. The volume is divided into eight thematic sections that include detailed original essays on particular facets of each theme. Focusing on how sport has influenced the history of women, minorities, politics, the media, and culture, these thematic chapters survey the major areas of debate and discussion. The volume offers a comprehensive view of the history of sport in America, pushing the field to consider new themes and approaches as well. Including a roster of contributors renowned in their fields of expertise, this ground-breaking collection is essential reading for all those interested in the history of American sport. Although there has been a lot written about how counter-terrorism laws impact on human rights and civil liberties, most of this work has focussed on the most obvious or egregious kinds of human rights abrogation, such as extended detention, torture, and extraordinary rendition. Far less has been written about the complex ways in which Western governments have placed new and far-reaching limitations on freedom of speech in this context since 9/11. This book compares three liberal democracies - the United States, the United Kingdom and Australia, in particular showing the commonalities and similarities in what has occurred in each country, and the changes in the appropriate parameters of freedom of speech in the counter-terrorism context since 9/11, achieved both in policy change and the justification for that change. In all three countries much speech has been criminalized in ways that were considered anachronistic, or inappropriate, in comparable policy areas prior to 9/11. This is particularly interesting because other works have suggested that the United States' unique protection of freedom of speech in the First Amendment has prevented speech being limited in that country in ways that have been pursued in others. This book shows that this kind of argument misses the detail of the policy change that has occurred, and privileges a textual reading over a more comprehensive policy-based understanding of the changes that have occurred. The author argues that we are now living a new-normal for freedom of speech, within which restrictions on speech that once would have been

considered aberrant, overreaching, and impermissible are now considered ordinary, necessary, and justified as long as they occur in the counter-terrorism context. This change is persistent, and it has far reaching implications for the future of this foundational freedom.
