What has happened on Nauru and Manus since Australia began its most recent offshore processing regime in 2012? This essential book provides a comprehensive and uncompromising overview of the first three years of offshore processing since it recommenced in 2012. It explains why offshore processing was re-established, what life is like for asylum seekers and refugees on Nauru and Manus, what asylum seekers, refugees and staff in the offshore detention centres have to say about what goes on there, and why the truth has been so hard to find. In doing so, it goes behind the rumours and allegations to reveal what is known - and what still is not known - about Australia's offshore detention centres. This

thoroughly researched study highlights the international community's failure to regulate contemporary state research, development, marketing and/or deployment of riot control agents and incapacitating chemical agent weapons. The WTO's Trade Policy Review Mechanism, which reviews the trade policies and practices of each WTO member at regular intervals, is generally considered to function well. In this day and age, complacency is unwise. Examining trade policy reviews throughout the lifetime of the TPRM, this book details its evolution from Article X of the General Agreement on Tariffs and Trade to the proposed modifications resulting from the mechanism's latest appraisal, examining the budgetary capabilities and technical performance of all the main entities who participate in the reviews. On the basis of these considerations, the author concludes that in

order to remain relevant, especially in times of increased global protectionism, the TPRM could, and should do better, and provides unique and timely suggestions for reform. In an interdisciplinary approach, the chapters outline and analyse the most significant dimensions of global citizenship, including transnational, historical, and cultural variations in its practice; foreign and domestic policy influences; and its impact on personal identities. The contributions ask and explore questions that are of immediate relevance for today's scholars, including: How does globalization in its current form present a new set of challenges for states, non-state actors, and individual citizens? How has globalization diminished, expanded, or complicated notions of citizenship? What rights could exist outside the context of state sovereignty? How can social accountability be imagined beyond the borders of towns, cities, or states? What forms of political representational legitimacy could be productive on the global level? When is it useful, possible or desirable for individuals to identify with global political communities? Drawing together a broad range of contributors and cutting edge research the volume offers chapters that seek to reflect the full spectrum of approaches and topics, providing a valuable resource which highlights the value of an extended and thoughtful study of the idea and practice of global citizenship within a broader consideration of the processes of globalization. It will be of great use to graduates and scholars of international relations, sociology, and global studies/affairs, as well as globalization. The core use of language is in face-to-face conversation. This is characterized by rapid turn-taking. This turn-taking poses a number central puzzles for the psychology of language. Consider, for example, that in large corpora the gap between turns is on the order of 100 to 300 ms, but the latencies involved in language production require minimally between 600 ms (for a single word) or 1500 ms (for as simple sentence). This implies that participants in conversation are predicting the ends of the incoming turn and preparing in advance. But how is this done? What aspects of this prediction are done when? What happens when the prediction is wrong? What stops participants coming in too early? If the system is running on prediction, why is there consistently a mode of 100 to 300 ms in response time? The timing puzzle raises further puzzles: it seems that

comprehension must run parallel with the preparation for production, but it has been presumed that there are strict cognitive limitations on more than one central process running at a time. How is this bottleneck overcome? Far from being 'easy' as some psychologists have suggested, conversation may be one of the most demanding cognitive tasks in our everyday lives. Further questions naturally arise: how do children learn to master this demanding task, and what is the developmental trajectory in this domain? Research shows that aspects of turn-taking, such as its timing, are remarkably stable across languages and cultures, but the word order of languages varies enormously. How then does prediction of the incoming turn work when the verb (often the informational nugget in a clause) is at the end? Conversely, how can production work fast enough in languages that have the verb at the beginning, thereby requiring early planning of the whole clause? What happens when one changes modality, as in sign languages - with the loss of channel constraints is turn-taking much freer? And what about face-to-face communication amongst hearing individuals - do gestures, gaze, and other body behaviors facilitate turn-taking? One can also ask the phylogenetic question: how did such a system evolve? There seem to be parallels (analogies) in duetting bird species, and in a variety of monkey species, but there is little evidence of anything like this among the great apes. All this constitutes a neglected set of problems at the heart of the psychology of language and of the language sciences. This Research Topic contributes to advancing our understanding of these problems by summarizing recent work from psycholinguists, developmental psychologists, students of dialog and conversation analysis, linguists, phoneticians, and comparative ethologists.

Every year the government gives private companies like G4S, Serco, Capita and ATOS £80 billion of taxpayers' money to handle some of our most sensitive and important services - but where is their transparency? Immigration is perhaps the most challenging and divisive issue of our time - so why has our government abdicated responsibility? As privatisation looms over an NHS in crisis, how do we hold these companies to account? Now, White speaks to campaigners, Whitehall insiders - and the companies themselves. Who Really Runs Britain? is a shocking compendium of what happens when outsourcing goes wrong - and what we do now. Why do nations break into one another's most important computer networks? There is an obvious answer: to steal valuable information or to attack. But this isn't the full story. This book draws on often-overlooked documents leaked by Edward Snowden, real-world case studies of cyber operations, and policymaker perspectives to show that intruding into other countries' networks has enormous defensive value as well. Two nations, neither of which seeks to harm the other but neither of which trusts the other, will often find it prudent to launch intrusions. This general problem, in which a nation's means of securing itself threatens the security of others and risks escalating tension, is a bedrock concept in international relations and is called the 'security dilemma'. This book shows not only that the security dilemma applies to cyber operations, but also that the particular characteristics of the digital domain mean that the effects are deeply pronounced. The

cybersecurity dilemma is both a vital concern of modern statecraft and a means of accessibly understanding the essential components of cyber operations. Jon Burrow-Branine challenges common narratives about what it means to be LGBTQ and Christian in the contemporary United States. Russia's controversial annexation of Crimea in 2014 and its involvement in the conflict in Ukraine have left international audiences stunned. Russia now occupies a central place on the Western security agenda and has been recast as an important area of scholarly inquiry. The conflict has raised important questions about Russia's understanding of conflict management and its approach to contemporary European security. This book provides a timely and contextual exploration of Russia's post-Soviet legacy of conflict management in the backdrop of its interaction with Europe's system of security governance. By exploring Russia's approach from the early 1990s to the present day, the book offers a comprehensive exploration into the evolution of Russian behavior, investigating whether Russia's approach has developed in accordance with the policies and practices of security governance that have emerged in the European experience of conflict management. Together with extensive documentary analysis and elite interviews, it employs the framework of security governance to examine Moscow's behavior across a set of case studies situated in the European political and security environment. It offers a timely contribution to our understanding of Russia's response to intrastate conflict and Russia's broader engagement with its contemporary security environment. As American television continues to garner considerable esteem, rivalling the seventh art in its

"cinematic" aesthetics and the complexity of its narratives, one aspect of its development has been relatively unexamined. While film has long acknowledged its tendency to adapt, an ability that contributed to its status as narrative art (capable of translating canonical texts onto the screen), television adaptations have seemingly been relegated to the miniseries or classic serial. From remakes and reboots to transmedia storytelling, loose adaptations or adaptations which last but a single episode, the recycling of pre-existing narrative is a practice that is just as common in television as in film, and this text seeks to rectify that oversight, examining series from M*A*S*H to Game of Thrones, Pride and Prejudice to Castle. A powerful and revealing firsthand account of the migrant and refugee experience on the overland route across Europe War and chaos in Syria and Iraq, violence in Afghanistan, and hopelessness in countries bordering war zones have spurred several million refugees and migrants to set out for Europe. The West Balkans, from Turkey through Greece, Macedonia, Bulgaria, Serbia, and Hungary, became the main entry route. Based in Budapest for more than three decades, Nick Thorpe was perfectly placed to cover the birth of the route, its heyday, and the attempts of numerous states to close it. This is his intimate account of the daily lives of those stuck in razor-wire enclosures or on the move along forest tracks, railway lines, motorways—and of the smugglers, border police, and political leaders who help, exploit, or obstruct them. He challenges those who demonize or glorify migration, visits the arrivals in their new environment, and studies their impact on the countries which welcomed them with open arms or hesitation.
