Green Local Governments in Florida Nov 04 2021 ABSTRACT: Sustainable development is increasingly being integrated within local government planning across United States. Many communities are attempting to translate this general principle into specific and measurable terms. The urban sustainability planning literature has mostly focused on descriptive case studies of pioneering cities that have been characterized as true innovators in their sustainability efforts. Noticeably absent from the literature, however, has been an examination of the sustainable development claims made by local governments undergoing 'green' certifications. This study evaluates the commitment and efforts of municipalities and counties of Florida within the framework of Florida Green Building Coalition's 'Green Local Government' standard through a web-based content analysis and a mailed survey. The findings indicate that local governments that have adopted this standard demonstrate a fairly high level of commitment to sustainable development. However, the adoption of specific local initiatives towards achieving this designation was found to be ad hoc and piecemeal. The findings also indicate that although some local governments have created novel incentive programs to promote green buildings, administrative, monetary and other barriers are preventing the growth of green building practice. Finally, the societal and economic aspects of sustainability were found to be insufficiently addressed in the local government initiatives as well as in the certification requirements.

Law Between Buildings Mar 28 2021 The rich field of urban law has thus far lacked a holistic and concerted scholarly focus on comparative and global perspectives. This work offers new inroads into the global and comparative streams within urban law by presenting emerging frameworks and approaches to topics ranging from urban housing and land use to legal informality and consumer financial protection. The volume brings together a group of international urban legal scholars to highlight emergent global, interdisciplinary perspectives within the field of urban law, particularly as they have import for comparative legal analysis. The book presents a timely addition to the literature given the urgent legal issues that continue to surface in an age of rapid urbanization and globalization.

Construction Contracts with North Carolina Local Governments Dec 17 2022 This book is designed as a quick reference for those involved in the North Carolina local government construction process. It presents local government construction law in a readable format and includes explanations of formal and informal bidding, standards for awarding bids, bid withdrawals, and exceptions to the bidding procedures. It also covers change orders, design and bidding rules for public buildings, and avoidance of favoritism in public contracts. The new edition updates and replaces the third edition, published in 1996.

Building by Local Authorities May 10 2022 Originally published in 1961, is the report into an investigation of the forms of organization used by local authorities of many varied types, populations and areas for the design and erection of new buildings and the maintenance of existing ones. It discusses the relations between Government departments and local authorities in the control of building design, standards and costs and the part played by Council committees in the control of building operations; it examines the division of functions between Chief Officers responsible for different aspects of building work (architects, engineers, surveyors and housing managers) and studies the use made of private architects and surveyors as well as the scope and organization of direct labour in local authority building.

Facilities addressed include: restaurants & cafeterias; medical care facilities; business & civic buildings; libraries; transient lodging; transportation facilities; judicial, legislative & regulatory facilities; detention & correctional facilities; residential housing; & public rights-of-way.

Status of State and Local Adoption of Energy Standards for New Commercial Buildings Feb 24 2021 This paper presents a summary of building energy standards adoption by state and major local governments and how the standards apply to new commercial buildings. Numerous public and private sector agencies and organizations develop energy standards and codes for commercial buildings. These documents serve, among others, state and local legislators and regulators who are interested in requiring their use to reduce the energy consumption of new commercial buildings. Through adoption or adaptation of these documents by state or local governments, minimum acceptable design and construction criteria for new commercial buildings are established in law. The energy standard or code adopted, or used as a basis for a state developed standard, may be any one of a number of documents. The authority of the state to regulate construction may apply throughout the entire state, only to a few types of buildings, or may be absent, in which case local government has regulatory authority. The means of adoption may be by legislation, regulation, municipal code, or other legal vehicle. At the present time there are widespread differences in the energy standards adopted by state and local government and the application of these standards to new commercial buildings.
