During an influenza pandemic, healthcare workers will be on the front lines delivering care to patients and preventing further spread of the disease. As the nation prepares for pandemic influenza, multiple avenues for protecting the health of the public are being carefully considered, ranging from rapid development of appropriate vaccines to quarantine plans should the need arise for their implementation. One vital aspect of pandemic influenza planning is the use of personal protective equipment (PPE)-the respirators, gowns, gloves, face shields, eye protection, and other equipment that will be used by healthcare workers and others in their day-to-day patient care responsibilities. However, efforts to appropriately protect healthcare workers from illness or from infecting their families and their patients are greatly hindered by the paucity of data on the transmission of influenza and the challenges associated with training and equipping healthcare workers with effective personal protective equipment. Due to this lack of knowledge on influenza transmission, it is not possible at the present time to definitively inform healthcare workers about what PPE is critical and what level of protection this equipment will provide in a pandemic. The outbreaks of severe acute respiratory syndrome (SARS) in 2003 have underscored the importance of protecting healthcare workers from infectious agents. The surge capacity that will be required to reduce mortality from a pandemic cannot be met if healthcare workers are themselves ill or are absent due to concerns about PPE efficacy. The IOM committee determined that there is an urgent need to address the lack of preparedness regarding effective PPE for use in an influenza pandemic. Preparing for an Influenza Pandemic : Personal Protective Equipment for Healthcare Workers identifies that require expeditious research and policy action: (1) Influenza transmission research should become an immediate and short-term research priority so that effective prevention and control strategies can be developed and refined. The current paucity of knowledge

significantly hinders prevention efforts. (2) Employer and employee commitment to worker safety and appropriate use of PPE should be strengthened. Healthcare facilities should establish and promote a culture of safety. (3) An integrated effort is needed to understand the PPE requirements of the worker and to develop and utilize innovative materials and technologies to create the next generation of PPE capable of meeting these needs.

"Pre-participation exams (PPE) for competitive young athletes are mandatory for all young competitive sports. Health care providers conduct competitive sport physicals that screen for deficits in athletic health, which may cause further injury to the player. Although comprehensive physical and comprehensive health histories are observed, screening with an electrocardiogram is not common practice. A focused cardiac exam with the incorporation of ECG is shown to increase detection for heart defects. Undetected heart defects may lead to sudden cardiac death (SCD) in young competitive athletes. Therefore, it may be beneficial to screen every athlete with ECG. The use of ECG with PPE is mandatory with many international competitive athletic organizations. However, it is not mandatory in the United States. There are many implications to this practice: legal, false positives, and cost. Cost is the largest barrier to integrating ECG into pre-participation exams, within the United States."--authors abstract

Octogenarian aerospace engineer Peter Hughes identified 6 critical points in his life at which an important decision was required, and where the rest of his life could have been quite different, depending on that decision. In every case, he was completely free to make the decision. In *Six Degrees of Freedom*, Hughes reflects on a full lifetime, including several work environments, his contributions to the aerospace industry (including work on the Canadarm), a passion for applied mathematics, family life, business and entrepreneurship, travel experience, and medical science. In so doing, and through his wry humor, he provides the reader thoughtful insight and useful life and career lessons. With 54 essay questions and accompanying sample answers, *The PPE: The Skill of Analysis* is the ideal study tool for law students because it provides the most utility for the money spent. First-year students nationwide benefit from this book because they do not need to purchase six different supplements to practice their skills because *The PPE* includes nine questions for each of the core subjects of Civil Procedure, Constitutional Law, Contracts, Criminal Law, Real Property, and Torts. *The PPE* also ensures students can effectively use the book throughout the semester. Most supplements randomly combine topics for each subject and students must wait until reading week to practice their exam-taking skills because the questions include topics from the beginning and the end of the course. *The PPE* strategically pairs commonly tested topics and presents the topics in the order they often appear on the syllabus. Finally, the book avoids overwhelming students by focusing on a specific learning objective.
