BLU Acceleration is a new technology that has been developed by IBM® and integrated directly into the IBM DB2® engine. BLU Acceleration is a new storage engine along with integrated run time (directly into the core DB2 engine) to support the storage and analysis of column-organized tables. The BLU Acceleration processing is parallel to the regular, row-based table processing found in the DB2 engine. This is not a bolt-on technology nor is it a separate analytic engine that sits outside of DB2. Much like when IBM added XML data as a first class object within the database along with all the storage and processing enhancements that came with XML, now IBM has added column-organized tables directly into the storage and processing engine of DB2. This IBM Redbooks® publication shows examples on an IBM Power Systems™ entry server as a starter configuration for small organizations, and build larger configurations with IBM Power Systems larger servers. This publication takes you through how to build a BLU Acceleration solution on IBM POWER® having SAP Landscape integrated to it. This publication implements SAP NetWeaver Business Warehouse Systems as part of the scenario using another DB2 Feature called Near-Line Storage (NLS), on IBM POWER virtualization features to develop and document best recommendation scenarios. This publication is targeted towards technical professionals (DBAs, data architects, consultants, technical support staff, and IT specialists) responsible for delivering cost-effective data management solutions to provide the best system configuration for their clients' data analytics on Power Systems. When I started working for SAP two decades ago I asked this question on my first day "Where are the best practices?" Prior to joining the organization I had heard people in the industry mention that one of the strengths of SAP software was that it was based on best practices. I was excited: finally I would get to see them. "There's no list" answered my mentor. "It's embedded into the processes supported by the system." "Ah," I said, a little disappointed. After two decades as an SAP consultant I can comfortably confirm this. However, this book is not about those types of best practices, it's about the best practices that should be observed when implementing, upgrading, modifying, and enhancing an SAP

ERP system. This book is based on my experience in the SAP consulting industry; first as an employee of the software firm, and then as a senior manager of one of the world's largest system integrators. In it you will find the best practices specific to a successful implementation. SAP S/4HANA Cloud has a lot to offer-see what's possible! The Mobile ID device should be viewed in the context of a portable biometric acquisition station, one that is not intended to be stationary and hardwired to a much larger system used for comparing or matching biometric samples. This is in contrast to traditional booking stations and other biometric enrollment stations incorporating physically secured full-sized livescan fingerprint readers, other biometric capture devices, or photo capture stations with setups adhering to distance, lighting, and other photo capture standards. Mobile ID devices allow one to collect biometric data in remote locations. Here is a community-developed series of guidelines that will provide the required levels of interoperability for various operational scenarios. Illustrations. Take an in-depth look at how basic financial accounting processes work in SAP S/4HANA in this practical guide. Six Sigma Black Belt, CMMi. Over the last few years, financial statement scandals, cases of fraud and corruption, data protection violations, and other legal violations have led to numerous liability cases, damages claims, and losses of reputation. As a reaction to these developments, several regulations have been issued: Corporate Governance, the Sarbanes-Oxley Act, IFRS, Basel II and III, Solvency II and BilMoG, to name just a few. In this book, compliance is understood as the process, mapped not only in an internal control system, that is intended to guarantee conformity with legal requirements but also with internal policies and enterprise objectives (in particular, efficiency and profitability). The current literature primarily confines itself to mapping controls in SAP ERP and auditing SAP systems. Maxim Chuprunov not only addresses this subject but extends the aim of internal controls from legal compliance to include efficiency and profitability and then well beyond, because a basic understanding of the processes involved in IT-supported compliance management processes are not delivered along with the software. Starting with the requirements for compliance (Part I), he not only answers compliance-relevant questions in the form of an audit guide for an SAP ERP system and in the form of risks and control descriptions (Part II), but also shows how to automate the compliance management process based on SAP GRC (Part III). He thus addresses the current need for solutions for implementing an integrated GRC system in an organization, especially focusing on the continuous control monitoring topics. Maxim Chuprunov mainly targets compliance experts, auditors, SAP project managers and consultants responsible for GRC products as readers for his book. They will find indispensable information for their daily work from the first to the last page. In addition, MBA, management information system students as well as senior managers like CIOs and CFOs will find a wealth of valuable information on compliance in the SAP ERP environment, on GRC in general and its implementation in particular. A significant majority of the books in the market are either step-by-step SPRO configuration instructions or are at a very high level discussing the general functionalities of each new S/4 HANA release. The authors in this case are set to strike a balance and provide practical advice with real life examples. To further distinguish this book from others, each chapter will first try to cover the major financial or business aspects, and then finish off with technical highlights and commentary. The goals of this book are: -Provide a brief introduction to the functional capabilities of SAP S/4 HANA Finance.- Provide the readers with a set of brainstorming questions so that the reader can better plan their S/4 HANA implementations.-Avoid common implementation errors encountered in the past.-Provide commentary or guidelines as to when it is best to customize vs. rely on SAP standard functionality.-Provide background into the different feedback mechanisms of an in-house IT department vs. external SAP consultants.-Provide technical suggestions, particularly in terms of performance optimization, for SAP finance implementations. This guide provides information for companies on how to plan and organize a SAP implementation. It includes examples of both new and existing SAP customer sites which offer tried and proven approaches, scripts and tools to save time and money. Preparing consolidated financial statements for an enterprise with a parent and one or more subsidiaries requires a detailed review of underlying transactions in order to properly reflect results and financial position. For large, integrated, and multinational organizations, likely with millions of transactions, it is imperative that the financial accounting software facilitate this process.
