This book describes the challenges that deep carious lesions pose for dental practitioners, including the risk of endodontic complications and the difficulty of restorative treatment, and identifies options for overcoming these challenges on the basis of the best available evidence. The opening chapter sets the scene by discussing pathophysiology, histopathology, clinical symptomatology, and treatment thresholds. The various treatment options are then systematically presented and reviewed, covering non-selective, stepwise, and selective carious tissue removal and restoration, sealing of lesions using resin sealants or crowns, and non-restorative management approaches. In each case the current evidence with respect to the treatment is carefully evaluated. Advantages and disadvantages are explained and recommendations made on when to use the treatment in question. Illustrative clinical cases and treatment pathways for clinicians are included. This book will be of value for all practitioners who treat dental caries and carious lesions, whether in the permanent or the primary dentition. It will also be of interest to under- and postgraduate students in cariology and restorative, operative, preventive, and pediatric dentistry. Developing or existing breast cancer centres strive to provide the highest quality care possible within their current financial and personnel resources. Although the basics in diagnosis and treatment of breast cancer are well known, providing, monitoring, and assessing the care offered can be challenging for most sites. Based on the work of the International Congress of Breast Disease Centres, this book provides a comprehensive overview of how to start or improve a breast unit wherever you live. Written by a multidisciplinary team of over 100 experts from 25 countries, it provides a practical guide for how to optimally organise high quality integrated breast cancer care, whilst taking into account the local economics and resources available to different countries. Each component of the care pathway, including imaging, surgery, systemic treatment, nursing, and genetic assessment, is discussed from a theoretical and practical aspect. The authors define targets to strive for, methods to assess care, and key recommendations for how to improve within existing limitations. Finally, the book looks beyond the breast care unit to consider accreditation and certification, emerging technologies, media, and the role of governments. This guide will be valuable for anyone working in the field of integrated breast cancer care, including established breast care experts, those new to the field, and policy makers interested in the social, financial, and political aspects of improving breast care quality. Creativity can be viewed as the first stage of the overall innovation process, an important dimension of the entrepreneurship and new venture creation processes, and as such, it is considered to be a cornerstone of organizational competitiveness in this global, knowledge-based economy. Research on creativity has increasingly become multilevel, with most work conducted at the individual or team level of analysis. At the same time, there is a large body of research being conducted at the organizational level of analysis on innovation, and there has been a significant amount of entrepreneurship research at the individual level, with an increasing focus on organizational entrepreneurship. However, these three research streams have developed independently, and there has been very little knowledge transfer between the three areas. Because entrepreneurship is often said to be a process that is required to convert innovation into business ventures that will deliver benefits to stakeholders, it is typically driven by an individual or small group of individuals. Creativity research, innovation research, and entrepreneurship research have the potential to inform each other, enriching our knowledge of each area, particularly with regard to the cognitive processes and behaviors that are most effective. This Handbook includes contributions from the leading scholars in these three research areas, who integrate contemporary research findings on organizational creativity, innovation, and entrepreneurship and provide fruitful new research directions."
