and the InternetIndex * A broad range of disciplines--energy conservation and air quality issues, construction and design, and the manufacture of temperature-sensitive products and materials--is covered in this comprehensive handbook * Provide essential, up-to-date HVAC data, codes, standards, and guidelines, all conveniently located in one volume * A definitive reference source on the design, selection and operation of A/C and refrigeration systems This second edition of the guide, now in SI units, highlights the acoustical features of a wide range of HVAC system components along with many noise and vibration control products, and offers strategies for selecting equipment and designing systems. Based on comments from readers of the first edition, the guide has been reorganized for easier use and includes more charts, tables, and photographs. The original publication was made possible by funds from ASHRAE research. Indoor air quality (IAQ) is increasingly making front-page headlines, and the magnitude of the problem is just beginning to surface. Issues for Jan. 1935- contain a directory of heating, piping and air conditioning equipment. The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and

cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacturer's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material. English abstracts from Kholodil'naia tekhnika.
