No descriptive material is available for this title. Many proclaimed the “ end of television ” in the early years of the twenty-first century, as capabilities and features of the boxes that occupied a central space in American living rooms for the preceding fifty years were radically remade. In this revised, second edition of her definitive book, Amanda D. Lotz proves that rumors of the death of television were greatly exaggerated and explores how new distribution and viewing technologies have resurrected the medium. Shifts in the basic practices of making and distributing television have not been hastening its demise, but are redefining what we can do with television, what we expect from it, how we use it—in short, revolutionizing it. Television, as both a technology and a tool for cultural storytelling, remains as important today as ever, but it has changed in fundamental ways. *The Television Will Be Revolutionized* provides a sophisticated history of the present, examining television in what Lotz terms the “ post-network ” era while providing frameworks for understanding the continued change in the medium. The second edition addresses adjustments throughout the industry wrought by broadband delivered television such as Netflix, YouTube, and cross-platform initiatives like TV Everywhere, as well as how technologies such as tablets and smartphones have changed how and where we view. Lotz begins to deconstruct the future of different kinds of television—exploring how “ prized content, ” live television sports and contests, and linear viewing may all be “ television, ” but very different types of television for both viewers and producers. Through interviews with those working in

the industry, surveys of trade publications, and consideration of an extensive array of popular shows, Lotz takes us behind the screen to explore what is changing, why it is changing, and why the changes matter. Instructor's Guide

Web Personalization can be defined as any set of actions that can tailor the Web experience to a particular user or set of users.

To achieve effective personalization, organizations must rely on all available data, including the usage and click-stream data (reflecting user behaviour), the site content, the site structure, domain knowledge, as well as user demographics and profiles. In addition, efficient and intelligent techniques are needed to mine this data for actionable knowledge, and to effectively use the discovered knowledge to enhance the users' Web experience. These techniques must address important challenges emanating from the size and the heterogeneous nature of the data itself, as well as the dynamic nature of user interactions with the Web.

These challenges include the scalability of the personalization solutions, data integration, and successful integration of techniques from machine learning, information retrieval and indexing, databases, agent architectures, knowledge representation, data mining, text mining, statistics, user modelling and human-computer interaction. The Semantic Web adds one more dimension to this. The workshop will focus on the semantic web approach to personalization and adaptation. The Web has been

formed to be an integral part of numerous applications in which a user interacts with a service provider, product sellers, governmental organisations, friends and colleagues. Content and services are available at different sources and places. Hence, Web applications need to combine all available knowledge in order to form personalized, user-friendly, and business-optimal services. A slow cooker cookbook for people who love to cook. Inspired by Mick Herron's 'Slough House' novels and Apple TV's Slow Horses, our new map and guide dives into the murky waters of jaded spy Jackson Lamb and his retinue of MI5 cast-offs. The London of Slow Horses is more than just a backdrop; at once grim and flash, oppressively surveilled and unknowably huge, the city is an integral part of Herron's stories. Lamb's London charts the real places used in both the books and TV show: the rundown parade of shops in Barbican in which Slough House squats; the bench by the Thames where Lamb and Diana Taverner hold secret meetings; Lamb's favourite Chinese restaurant; the Marylebone cafe the opposition uses for dead drops, the hidden hideaways and pubs to which Cartwright, Standish, Ho and co. retreat to drown their sorrows. Lamb's London is an essential addition to the library of every Mick Herron fan, and for casual viewers it provides a thrilling real-life link to the most exciting and original

spy drama of our time. In the tradition of his internationally bestselling *In Praise of Slow*, and drawing on examples from the most progressive and successful leaders in business, politics, science and society, Carl Honoré brilliantly illuminates why the best way to face our problems might just be to take our time. If the high-flying fighter pilots of the RAF can own up to their mistakes, why can't the rest of us? Toyota was fantastically good at exposing its failings and correcting them, until it stopped, setting the company up for one of the most spectacular falls from grace in the history of the auto industry. BP couldn't bring itself to apologize for its catastrophic oil spill until the entire Gulf Coast of the United States was bearing the brunt of its technological shortcomings. Addicted as we might be to the quick fix--pills, crash diets or just diverting attention from things about to go wrong--the quick fix never really works. Trying to solve problems in a hurry, sticking on a plaster when surgery is needed, might deliver temporary relief, but only at the price of storing up worse trouble for later. For those looking for a fix that sticks, *The Slow Fix* will help us produce solutions in life and work that endure.
