So-called Intent-Based Networking (IBN) is founded on well-known SDN (Software-Defined Networking) and represents one of the most important emerging network infrastructure opportunities. The IBN is the beginning of a new era in the history of networking, where the network itself translates business intentions into appropriate network configurations for all devices. This minimizes manual effort, provides an additional layer of network monitoring, and provides the ability to perform network analytics and take full advantage of machine learning. The centralized, software-defined solution provides process automation and proactive problem solving as well as centralized management of the network infrastructure. With software-based network management, many operations can be performed automatically using intelligent control algorithms (artificial intelligence and machine learning). As a result, network operation costs, application response times and energy

consumption are reduced, network reliability and performance are improved, network security and flexibility are enhanced. This will be a benefit for existing networks as well as evolved LTE-based mobile networks, emerging Internet of Things (IoT), Cloud systems, and soon for the future 5G/6G networks. The future networks will reach a whole new level of self-awareness, self-configuration, self-optimization, self-recovery and self-protection. This volume consists of 28 chapters, based on recent research on IBN. The volume is a collection of the most important research for the future intent-based networking deployment provided by different groups of researchers from Ukraine, Germany, Slovak Republic, Switzerland, South Korea, China, Czech Republic, Poland, Brazil, Belarus and Israel. The authors of the chapters from this collection present in depth extended research results in their scientific fields. The presented contents are highly interesting while still being rather practically oriented and straightforward to understand. Herewith we would like to wish all our readers a lot of inspiration by studying of the volume! This thesis looks into the debate over intention and interpretation in the artistic context, and focuses on literature in particular. The main issue here is whether or not the author's intention is relevant to the interpretation of her work. I critically discuss the major positions in the analytic tradition and defend my view in the final chapter. The position that rejects appeal to external evidence of authorial intent is called anti-intentionalism, which claims that linguistic convention determines work-meaning and that such convention is all the interpreter needs. This position, alternatively called conventionalism, suffers from the contextualist criticism that contextual factors, aside from linguistic convention, play a crucial part in determining work-meaning. A variation on anti-intentionalism is the value-maximizing theory, which holds that the interpreter should look for interpretations that maximize the work's value within the limits set by relevant linguistic (and perhaps contextual) factors. However, some philosophers disagree that aesthetic satisfaction is the primary aim of interpretation. Contra anti-intentionalism, actual intentionalism claims that authorial intention is an indispensable element

in interpretation. The extreme version identifies what a work means with what the author intends it to mean, and is widely seen as implausible. The moderate version acknowledges failed intentions, and claims that when an intention fails meaning is determined by convention plus context. I argue that the moderate version has a difficulty in giving convention and context the same credit for meaning-determination as authorial intent. A middle course between actual intentionalism and anti-intentionalism is hypothetical intentionalism, which maintains that work-meaning is determined by the intention which the appropriate audience is best justified in attributing to the author. A variation on this position holds that it is the postulated or implied author's intention that determines work-meaning. I argue this latter position is more convincing because it does a better job in balancing interpretative freedom and constraints. A collection of essays is concerned with deepening our understanding of the notion of intention. "...an excellent and comprehensive discussion of a debate that was initiated in this century in William Wimsatt's and Monroe C. Beardsley's influential article 'The Intentional Fallacy.'...this is a splendidly conceived and very useful collection of essays. Readers will want to take issue with the arguments of individual authors, but this is to be expected in a volume at the cutting edge of a fertile philosophical controversy." --David Novitz, *The Philosophical Quarterly* "What is the connection, if any, between the author's intentions in (while) writing a work of literature and the truth (acceptability, validity) of interpretive statements about it?" With this question, Gary Isminger introduces a literary debate that has been waged for the past four decades and is addressed by philosophers and literary theorists in *Intention and Interpretation*. Thirteen essays discuss the role of appeals to the author's intention in interpreting works of literature. A well-known argument by E.D. Hirsch serves as the basic text, in which he defends the appeal to the author's intention against Wimsatt and Beardsley's claim that such an appeal involved "the intentional fallacy." The essays, mostly commissioned by the editor, explore the presuppositions and consequences of arguing for the importance of the author's intentions in the

way Hirsch does. Connections emerge between this issue and many fundamental issues in metaphysics and the philosophy of mind as well as in aesthetics. The (old) "New Criticism" and current Post-Structuralism tend to agree in disenfranchising the author, and many people now are disinclined even to consider the alternative. Hirsch demurs, and arguments like his deserve the careful attention, both from critics and sympathizers, that they receive here. Literary scholars and philosophers who are sympathetic to Continental as well as to Anglo-American styles of philosophy are among the contributors. "This is a timely book appearing as it does when postmodernist views of the death of the author are disappearing quickly from the scene. As a collection it exemplifies the best work that is being done on this problem at the moment, and it will no doubt inspire further debate." --*The Journal of Aesthetics and Art Criticism* "[T]his volume contains important articles illuminating the central debate over the role and relevance of authorial intentions in literary interoperation." --*British Journal of Aesthetics* G. E. M. Anscombe's *Intention* is a classic of twentieth-century philosophy. The work has been enormously influential despite being a dense and largely misunderstood text. It is a standard reference point for anyone engaging with philosophy of action and philosophy of psychology. In this Routledge Philosophy GuideBook, Rachael Wiseman: situates *Intention* in relation to Anscombe's moral philosophy and philosophy of mind considers the influence of Aquinas, Aristotle, Frege, and Wittgenstein on the method and content of *Intention* adopts a structure for assessing the text that shows how Anscombe unifies the three aspects of the concept of intention considers the influence and implications of the piece whilst distinguishing it from subsequent work in the philosophy of action Ideal for anyone wanting to understand and gain a perspective on Elizabeth Anscombe's seminal work, this guide is an essential introduction, useful in the study of the philosophy of action, ethics, philosophy of psychology and related areas. Do the artist's intentions have anything to do with the making and appreciation of works of art? In *Art and Intention* Paisley Livingston develops a broad

and balanced perspective on perennial disputes between intentionalists and anti-intentionalists in philosophical aesthetics and critical theory. He surveys and assesses a wide range of rival assumptions about the nature of intentions and the status of intentionalist psychology. With detailed reference to examples from diverse media, art forms, and traditions, he demonstrates that insights into the multiple functions of intentions have important implications for our understanding of artistic creation and authorship, the ontology of art, conceptions of texts, works, and versions, basic issues pertaining to the nature of fiction and fictional truth, and the theory of art interpretation and appreciation. Livingston argues that neither the inspirationist nor rationalistic conceptions can capture the blending of deliberate and intentional, spontaneous and unintentional processes in the creation of art. Texts, works, and artistic structures and performances cannot be adequately individuated in the absence of a recognition of the relevant makers' intentions. The distinction between complete and incomplete works receives an action-theoretic analysis that makes possible an elucidation of several different senses of 'fragment' in critical discourse. Livingston develops an account of authorship, contending that the recognition of intentions is in fact crucial to our understanding of diverse forms of collective art-making. An artist's short-term intentions and long-term plans and policies interact in complex ways in the emergence of an artistic oeuvre, and our uptake of such attitudes makes an important difference to our appreciation of the relations between items belonging to a single life-work. The intentionalism Livingston advocates is, however, a partial one, and accommodates a number of important anti-intentionalist contentions. Intentions are fallible, and works of art, like other artefacts, can be put to a bewildering diversity of uses. Yet some important aspects of art's meaning and value are linked to the artist's aims and activities. Tackling one of the most confusing and controversial issues in the field of international criminal law — i.e., the genocidal intent element, this monograph seeks to develop an account of genocidal intent from a collectivist perspective.

Drawing upon the two-layered structure of the crime of genocide composed of the 'conduct level' and 'context level', it detects the genocidal intent element at the 'context level'. The genocidal intent found in this manner belongs to a collective, which significantly departs from the prior individualistic understandings of the notion of genocidal intent. The author argues that the crime of genocide is not a 'crime of mens rea'. Collective genocidal intent at the 'context level' operates in a way that renders the crime of genocide itself a criminal enterprise. The idea of genocide as a criminal enterprise also suggests that genocide is a leadership crime in respect of which only the high-level actors can be labeled as principals (as opposed to accessories). The book criticizes the dominant individualistic approaches to genocidal intent (in particular: the knowledge-based approach) which have thus far governed the relevant jurisprudential and academic analysis. It further demonstrates that the hidden notion of 'collective genocide' silently governs the relevant international jurisprudence. Practitioners and academics in the field of international criminal law and related disciplines will find in this book a new approach to the crime of genocide. The text is the first-ever book-length exposition of a collective account of genocidal intent. Its accessibility is highly enhanced by relevant footnotes. Sangkul Kim is Lecturer at Korea University in Seoul and Research Fellow with the Centre for International Law Research and Policy (CILRAP). He served as Associate Legal Adviser at the Office of the Prosecutor of the International Criminal Court (2004-2008). He earned law degrees from Korea University and Georgetown University Law Center. This is the first broad study of the treatment of intent in Islamic law, examining ritual, commercial, family, and penal law and providing new insights into Muslim understandings of law, religious ritual, action, agency, and language. As individuals assume greater responsibility for retirement saving, the book analyses how people save and make financial decisions, taking into account the behavioural revolution and the effect of society and context.--Résumé de l'éditeur. Intentionality - the attribution of inner states - has long been the preserve of philosophical abstraction, psychological

theorizing, and religious dictate. Yet intentionality is above all a social and cultural phenomenon. In *Other Intentions*, nine scholars from fields as diverse as philosophy, anthropology, medieval literature, and the law examine at the cultural level specific ethnographic, literary, and legal cases in which the question of inner states proves illuminating. The authors argue that while intentionality might at first appear to be a wholly abstract phenomenon, it is, in fact, deeply entwined with the nature and distribution of power, the portrayal of events, the assessment of personhood, and the social assignment of moral and legal responsibility. This volume brings new insight to our understanding of our own and others' intentions. This book departs from the premise that context and appropriateness represent complex relational configurations which can no longer be conceived as analytic primes but rather require the accommodation of micro and macro perspectives to capture their inherent dynamism. The edited volume presents a collection of papers which examine the connectedness between context and appropriateness from interdisciplinary perspectives. The papers use different theoretical frameworks, such as situation theory, speech act theory, cognitive pragmatics, sociopragmatics, discourse analysis, argumentation theory and functional linguistics. They reflect current moves in pragmatics and discourse analysis to cross disciplinary and methodological boundaries by integrating relevant premises and insights, in particular cognition, negotiation of meaning, sequentiality, recipient design and genre. This title was first published in 2001. *Legal Systems* are posited on the assumption that people are rational intentional agents who can choose to follow or break the law. This book connects the common interests of lawyers and philosophers in the meaning of intention and its relation to responsibility in legal, moral and political contexts. *Advanced Driver Intention Inference: Theory and Design* describes one of the most important functions for future ADAS, namely, the driver intention inference. The book contains the state-of-art knowledge on the construction of driver intention inference system, providing a better understanding on how the human driver

intention mechanism will contribute to a more naturalistic on-board decision system for automated vehicles. Features examples of using machine learning/deep learning to build industry products. Depicts future trends for driver behavior detection and driver intention inference. Discuss traffic context perception techniques that predict driver intentions such as Lidar and GPS. In the humanities and social sciences, context is one of those terms which is frequently used and frequently referred to, but hardly made explicit. This book proposes a model for describing the multifaceted connectedness between language and language use, and between cognitive context, linguistic context, social context and sociocultural context and their underlying principles of well-formedness, grammaticality, acceptability and appropriateness. Combining a range of theoretical frameworks in linguistics, pragmatics, sociolinguistics, discourse analysis and philosophy of language, Fetzer goes beyond the unilateral conception of speech and argues for a dialogue outlook on natural-language communication based on dialogue principles and dialogue categories. The most important ones are cooperation, joint production, micro and macro communicative intentions, micro and macro validity claims, co-suppositions, dialogue-common ground and communicative genre. What do our assumptions about authorship matter for our experience of meaning? This book examines the debates in the humanities and social sciences over whether authorial intentions can, or should, constrain our interpretation of language and art. Scholars assume that understanding of linguistic and artistic meaning should not be constrained by beliefs about authors and their possible intentions in creating a human artifact. It is argued here that people are strongly disposed to infer intentionality when understanding oral speech, written texts, artworks, and many other human actions. Although ordinary people, and scholars, may infer meanings that diverge from, or extend beyond, what authors intend, our experience of human artifacts as meaningful is fundamentally tied to our assumptions of intentionality. This challenges the traditional ideas of intentions as existing solely in the minds of individuals, and formulates a new conceptual framework for

examining if and when intentions influence the interpretation of meaning. This accessible, personal, and provocative study returns to the major subject in literary discussion before and during the relatively recent flourishing of literary theory, that of literary intention. Does the author's personal intention or historical site determine a correct interpretation of a literary work? Probing the entire range of issues connected with this many-faceted and knotty concept, this book engages with interpretation on both theoretical and practical levels. It argues that the hard questions about interpretation connected to issues of intention cannot be sidestepped or ignored. It does not argue for conservative concepts of literature itself, nor against the major historical engagements of critics in our time. But in addressing those who continue to read or teach literature, it does insist on a level of sophistication in issues of literary interpretation that cannot be assured by historical research and knowledge of the social and cultural connections to literary works. The overall aim of the work is to recall readers to the great complexity, pleasure, and interest of literary interpretation. This thesis is an examination of the role of artistic intentions in the interpretation of art. Chapter 1 is a survey of the recent theories of interpretation that attempts to establish the shortcomings of anti-intentionalism and hypothetical intentionalism while making a case for the superiority of the view I prefer, moderate actual intentionalism. Chapter 2, then, is concerned, almost exclusively, with the major point of difference among its advocates: namely, the criteria for successfully realizing an intention. Chapter 3 is concerned with a latent tension in the position itself. Resolving this tension involves rethinking the role of conventions and context and placing a greater emphasis on intentions themselves. Based on the author's Oxford doctoral thesis. *Mobile Intention Recognition* addresses problems of practical relevance for mobile system engineers: how can we make mobile assistance systems more intelligent? How can we model and recognize patterns of human behavior which span more than a limited spatial context? This text provides an overview on plan and intention recognition, ranging from the late 1970s to very recent

approaches. This overview is unique as it discusses approaches with respect to the specificities of mobile intention recognition. This book covers problems from research on mobile assistance systems using methods from artificial intelligence and natural language processing. It thus addresses an extraordinary interdisciplinary audience. *Intention in Talmudic Law: Between Thought and Deed* offers a comprehensive history of intention in rabbinic classical law, tracing developments in legal thought, and demonstrating how intention became a nuanced, differentially applied concept across a wide array of legal realms. *The Handbook of Research on Designing Sustainable Strategies to Develop Entrepreneurial Intention* is a comprehensive book that addresses the issue of entrepreneurial intention and its development. The book highlights the significant role of entrepreneurship in the growth and development of economies and presents a global understanding of entrepreneurial intention. It discusses how the "seeds" of entrepreneurial intention are sown, and how a supportive entrepreneurial ecosystem can develop successful entrepreneurs. The book provides insights into the challenges and apprehensions faced by aspiring entrepreneurs. This book develops models and frameworks to identify strategies, best practices, case studies, and successful examples from multiple regions to develop entrepreneurial intention among students of higher education. It bridges the gap between policies related to the entrepreneurial ecosystem and its implementation to nurture entrepreneurial intention among aspiring entrepreneurs. This book is an essential resource for researchers, industry practitioners, academicians, higher education institutions, students, policy makers, corporate executives, banks, venture capitalists, angel investors, and entrepreneurs trying to re-enter. It is also highly useful for undergraduate, graduate, and research level students pursuing entrepreneurship education and aspiring to become entrepreneurs. Overall, the book provides an in-depth understanding of entrepreneurial intention and how it can be nurtured to create successful entrepreneurs, making it an important reference for anyone interested in entrepreneurship and economic

growth. The powers of seeing, hearing, remembering, distinguishing, judging, reasoning, are speculative powers; the power of executing any work of art or labour is active power. Thomas Reid I Some causal efficacy is due to persons. And, some of the causal efficacy due to persons is imparted by, not merely to, them. Further, some of the causal efficacy due to persons and imparted by them is imparted by and not merely to their physical, active bodies. Otherwise there is no agency. I will assume, with everyone at the outset, that the world contains agency of the kind found in some of a person's comings and goings, movings and changing of things. Agency is exhibited in more and in less sophisticated forms, that is, in any sophisticated, artful activity and in less complex, non-articulate physical activities. In both there appears to be more than mere causal efficacy imparted to the environment by a person. In sophisticated agency activities are organized, guided, purposive and purposeful comings and goings, movings and changes. And purpose is not absent in less sophisticated purposive activities of active creatures. So I shall argue in what follows. Now is the time for introducing the themes, topics, and issues to be considered, and the plan and purpose in them. Based on papers from the IPRA Conference, which was held in Melbourne in 2009. The subject of intention in the criminal law is currently causing many debates among criminal lawyers. This compelling and probing volume addresses two key questions: should the criminal law distinguish between direct intention and recklessness, and what should the law be concerning cases of oblique intention - i.e. cases in which the actor does not act in order to cause the proscribed result, but is nevertheless practically certain that his, or her, action will cause it? The discussion is divided into two parts with the first being devoted to the question of whether it is justified to grade offences based on the distinction between intention and recklessness. The second part deals with offences in which intention is required as a condition for the criminalisation of the conduct and in the context of which reckless actors are not exposed to criminal liability. The book explores the issue of intention from the viewpoint of degrees of moral culpability and it discusses, inter alia, the doctrine of double

effect, the possibility that the law in cases of oblique intention should not be the same for all crimes of intention, and the possibility of using a moral formula in the definition of certain offences. The discussion also addresses many other criminal law issues, including the philosophy of punishment, the role of motives in determining degrees of blameworthiness, sentencing, stigma, and criminal attempts. The question of intention is central to the study of literature. How far can an author's intentions determine the meanings of his/her text? What do we mean by 'intention' in a literary context? What force does the reader's intention have in the construction of textual meaning? To what extent can a text itself be said to be 'intentional'? The aim of this book is to provide an in-depth analysis and critique of this concept of intention, its uses within the realms of literary theory, aesthetics, philosophy of language, phenomenology and deconstruction, and its potential for redefinition. Mitchell sets out to re-think intention and interrogate the possibilities of an intentionalism more suited to a formalist or textualist critical methodology. She moves from an assessment of the pitfalls of a traditional authorial intentionalism, towards the formulation of an 'intentionality of form', where intention is seen as a formal attribute of the text itself In *Biblical Exegesis without Authorial Intention? Interdisciplinary Approaches to Authorship and Meaning*, Clarissa Brey offers contributions with a wide range of approaches to the question of the author in biblical interpretation. The volume is an invitation to revisit this question. Plan recognition, activity recognition, and intent recognition together combine and unify techniques from user modeling, machine vision, intelligent user interfaces, human/computer interaction, autonomous and multi-agent systems, natural language understanding, and machine learning. *Plan, Activity, and Intent Recognition* explains the crucial role of these techniques in a wide variety of applications including: personal agent assistants computer and network security opponent modeling in games and simulation systems coordination in robots and software agents web e-commerce and collaborative filtering dialog modeling video surveillance smart homes In this book, follow the history of

this research area and witness exciting new developments in the field made possible by improved sensors, increased computational power, and new application areas. Combines basic theory on algorithms for plan/activity recognition along with results from recent workshops and seminars Explains how to interpret and recognize plans and activities from sensor data Provides valuable background knowledge and assembles key concepts into one guide for researchers or students studying these disciplines This book explores the logic and historical origins of a strange taboo that has haunted literary critics since the 1940s, keeping them from referring to the intentions of authors without apology. The taboo was enforced by a seminal article, "The Intentional Fallacy," and it deepened during the era of poststructuralist theory. Even now, when the vocabulary of "critique" that has dominated the literary field is under sweeping revision, the matter of authorial intention has yet to be reconsidered. This work explains how "The Intentional Fallacy" confused different kinds of authorial intentions and how literary critics can benefit from a more up-to-date understanding of intentionality in language. The result is a challenging inventory of the resources of literary theory, including implied readers, poetic speakers, omniscient narrators, interpretive communities, linguistic indeterminacy, unconscious meaning, literary value, and the nature of literature itself. Ten chapters discuss key aspects of advanced PLS analysis and its practical applications, covering new guidelines and improvements in the use of PLS-PM as well as various individual topics. In *Not Like Those Who Have No Hope*, Nestor O. Miguez brings the insights of historical-critical study and political analysis together with incisive theological reflection. Taking on European philosophical interpretations of Paul, the "North Atlantic consensus" regarding social stratification in the Pauline churches, and the distortions of "rapture" theology, Miguez situates Paul's mission in the political context of Roman Thessalonica and reads his first letter in engagement with Latin American realities. The result is a surprising rediscovery of Paul as an organic intellectual for whom hope is always a socially concrete reality. The essays in *Intention and Identity* explore themes in Finnis's work

touched on only lightly, if at all, in *Natural Law and Natural Rights*, developing profound accounts of personal identity and existence; group identity and common good; and intention and choice as action- and self-shaping. In his many-faceted study of what it is to be a human person, and a human community, Finnis not only engages with contemporary philosophers and bioethicists such as Peter Singer, Michael Lockwood and John Harris, with thinkers from other traditions such as Karol Wojtyla (John Paul II), and with judges in the highest courts. He also offers illuminating and deeply considered readings of Shakespeare and Aquinas, and debates with Roger Scruton, Joseph Raz, Hans Kelsen, John Rawls, Glanville Williams, Richard Posner, Ronald Dworkin and others. The role of intention in the criminal law and the law of civil wrongs is searchingly explored through case-law, as are judicial attempts to understand conditional and preparatory intentions. Moral or bioethical issues discussed include in vitro fertilization, cloning, abortion, euthanasia, and 'brain death', patriotism, multi-culturalism and immigration. The papers show the power of a sometimes neglected aspect of the new classical theory of natural law. The volume includes previously unpublished papers on whether brain life is relevant to the beginning of a person's life, on its relevance to the end of one's life, and a substantial introduction in which John Finnis reflects on the changes in his thinking on personal reality and on how intention is to be analysed and understood and its moral significance appreciated. Intention plays a complex role in human utterances. The interpretation of literary texts is a strong case in point: for about two hundred years there have been conflicting views about whether, and how much, authorial intention should matter when professional readers interpret literature. These debates grew increasingly fierce during the post-World War II period, the landmarks of which were the notions of intentional fallacy and the death of the author. Seventy-odd years later, there is still no consensus in sight. What has always been neglected in the debates around authorial intention, however, is a reflection on the historical dimension of the debate and how historically bound each of the theoretical positions in the debate were. This book focusses

precisely on the historical dimension of authorial intention, providing a systematic historical reconstruction of the importance ascribed to it in literary texts from Classical Greece to the present day, and including a chapter on authorial intention in jurisdiction and legal interpretation from a historical perspective. The book reconstructs a typology of the most important concepts of intention in interpretation for diachronic and synchronic use. At the same time it offers insights from a field-theoretical perspective into how literary studies as a discipline works over time and how notions of intention and interpretation help create forms of literary knowledge.
