An interactive workbench to model, analyze, and simulate physical and mathematical systems. An intuitive block-diagram interface lets user model simple and complex dynamical systems; choose from a set of integration methods to simulate user's system; and apply the analysis tools in SIMULINK and MATLAB to analyze and improve the simulation. This edition enables students to quickly build and test virtual prototypes to explore and study dynamic system concepts at any level of detail with minimum effort using block diagram modeling and simulation. Includes

an extensive library of predefined blocks which can be dragged-and-dropped in order to build dynamic system models. "MATLAB is a high-level language and interactive environment for numerical computation, visualization, and programming. Using MATLAB, you can analyze data, develop algorithms, and create models and applications. The language, tools, and built-in math functions enable you to explore multiple approaches and reach a solution faster than with spreadsheets or traditional programming languages"-- Designed to help learn how to use MATLAB and Simulink for the analysis and design of automatic control systems.
