Learning by Doing Feb 10 2022 This book contains step-by-step instructions and illustrations on the basics of drawing, designing, painting and carving in the Pacific Northwest Coast Native Indian art style.

Doing School Nov 26 2020 This book offers a highly revealing and troubling view of today's high school students and the ways they pursue high grades and success. Denise Pope, veteran teacher and curriculum expert, follows five motivated and successful students through a school year, closely shadowing them and engaging them in lengthy reflections on their school experiences. What emerges is a double-sided picture of school success. On the one hand, these students work hard in school, participate in extracurricular activities, serve their communities, earn awards and honours, and appear to uphold school values. But on the other hand, they feel that in order to get ahead they must compromise their values and manipulate the system by scheming, lying, and cheating. In short, they do school, that is, they are not really engaged with learning nor can they commit to such values as integrity and community. The words and actions of these five students - two boys and three girls from diverse ethnic and socioeconomic backgrounds - underscore the frustrations of being caught in a grade trap that pins future success to high grades and test scores. Their stories raise critical questions that are too important for parents, educators, and community leaders to ignore. Are schools cultivating an environment that promotes intellectual curiosity, cooperation, and integrity? Or are they fostering anxiety, deception, and hostility? Do today's schools inadvertently impede the very values they claim to embrace? Is the success that current assessment practices measure the kind of success we want for our children?

Learning as a Generative Activity Jul 15 2022 During the past twenty-five years, researchers have made impressive advances in pinpointing effective learning strategies (namely, activities the learner engages in during learning that are intended to improve learning). In *Learning as a Generative Activity: Eight Learning Strategies that Promote Understanding*, Logan Fiorella and Richard E. Mayer share eight evidence-based learning strategies that promote understanding: summarizing, mapping, drawing, imagining, self-testing, self-explaining, teaching, and enacting. Each chapter describes and exemplifies a learning strategy, examines the underlying cognitive theory, evaluates strategy effectiveness by analyzing the latest research, pinpoints boundary conditions, and explores practical implications and future directions. Each learning strategy targets generative learning, in which learners actively make sense out of the material so they can apply their learning to new situations. This concise, accessible introduction to learning strategies will benefit students, researchers, and practitioners in educational psychology, as well as general readers interested in the important twenty-first-century skill of regulating one's own learning.

The First 20 Hours Oct 06 2021 Forget the 10,000 hour rule— what if it ' s possible to learn the basics of any new skill in 20 hours or less? Take a moment to consider how many things you want to learn to do. What ' s on your list? What ' s holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don ' t have and effort you can ' t spare? Research suggests it takes 10,000 hours to develop a new

skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the most frustrating. That's why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In *The First 20 Hours*, Josh Kaufman offers a systematic approach to rapid skill acquisition— how to learn any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to performing noticeably well. Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific, the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much easier to sit down and focus on deliberate practice. Create fast feedback loops: Getting accurate, real-time information about how well you're performing during practice makes it much easier to improve. Whether you want to paint a portrait, launch a start-up, fly an airplane, or juggle flaming chainsaws, *The First 20 Hours* will help you pick up the basics of any skill in record time . . . and have more fun along the way.

Beyond Learning by Doing May 21 2020 "What is experiential education? What are its theoretical roots? Where does this approach come from? Offering a fresh and distinctive take, this book is about going beyond "learning by doing" through an exploration of its underlying theoretical currents. As an increasingly popular pedagogical approach, experiential education encompasses a variety of curriculum projects from outdoor and environmental education to service learning and place-based education. While each of these sub-fields has its own history and particular approach, they draw from the same progressive intellectual taproot. Each, in its own way, evokes the power of "learning by doing" and "direct experience" in the educational process. By unpacking the assumed homogeneity in these terms to reveal the underlying diversity of perspectives inherent in their usage, this book allows readers to see how the approaches connect to larger conversations and histories in education and social theory, placing experiential education in social and historical context"-- Provided by publisher.

Art of Doing Science and Engineering Mar 11 2022 Highly effective thinking is an art that engineers and scientists can be taught to develop. By presenting actual experiences and analyzing them as they are described, the author conveys the developmental thought processes employed and shows a style of thinking that leads to successful results is something that can be learned. Along with spectacular successes, the author also conveys how failures contributed to shaping the thought processes. Provides the reader with a style of thinking that will enhance a person's ability to function as a problem-solver of complex technical issues. Consists of a collection of stories about the author's participation in significant discoveries, relating how those discoveries came about and, most importantly, provides analysis about the thought processes and reasoning that took place as the author and his associates progressed through engineering problems.

Learning by Doing Jul 27 2023 In the third edition of *Learning by Doing: A Handbook for Professional Learning Communities at Work*®, authors Richard DuFour, Rebecca DuFour, Robert Eaker, Thomas W. Many, and Mike Mattos provide educators with a comprehensive, bestselling guide to transforming their schools into professional learning communities (PLCs). In this revised version, contributor and Canadian educator Karen Power has adapted the third edition for Canadian educators, emphasizing how Canadian educators can effectively improve learning for each student across their unique and widely diverse provinces and territories. Rewritten so that the scenarios, research, and language appropriately meet the needs of Canadian educators, this version is packed with real-world strategies and advice that will assist readers in transforming their school or district into a successful PLC.

Learning by Doing Aug 16 2022

Grit Jul 23 2020 In this instant New York Times bestseller, Angela Duckworth shows anyone striving to succeed that

the secret to outstanding achievement is not talent, but a special blend of passion and persistence she calls “grit.” “Inspiration for non-genius everywhere” (People). The daughter of a scientist who frequently noted her lack of “genius,” Angela Duckworth is now a celebrated researcher and professor. It was her early eye-opening stints in teaching, business consulting, and neuroscience that led to her hypothesis about what really drives success: not genius, but a unique combination of passion and long-term perseverance. In *Grit*, she takes us into the field to visit cadets struggling through their first days at West Point, teachers working in some of the toughest schools, and young finalists in the National Spelling Bee. She also mines fascinating insights from history and shows what can be gleaned from modern experiments in peak performance. Finally, she shares what she’s learned from interviewing dozens of high achievers—from JP Morgan CEO Jamie Dimon to New Yorker cartoon editor Bob Mankoff to Seattle Seahawks Coach Pete Carroll. “Duckworth’s ideas about the cultivation of tenacity have clearly changed some lives for the better” (The New York Times Book Review). Among *Grit*’s most valuable insights: any effort you make ultimately counts twice toward your goal; grit can be learned, regardless of IQ or circumstances; when it comes to child-rearing, neither a warm embrace nor high standards will work by themselves; how to trigger lifelong interest; the magic of the Hard Thing Rule; and so much more. Winningly personal, insightful, and even life-changing, *Grit* is a book about what goes through your head when you fall down, and how that—not talent or luck—makes all the difference. This is “a fascinating tour of the psychological research on success” (The Wall Street Journal).

Learning Science by Doing Science Apr 24 2023 Time-tested activities to teach the key ideas of science—and turn students into scientists! This witty book adapts classic investigations to help students in grades 3 through 8 truly think and act like scientists. Chapter by chapter, this accessible primer illustrates a “big idea” about the nature of science and offers clear links to the Next Generation Science Standards and its Science and Engineering Practices. You’ll also find: A reader-friendly overview of the NGSS Guidance on adapting the activities to your grade level, including communicating instructions, facilitating discussions, and managing safety concerns Case studies of working scientists to highlight specifics about the science and engineering practices

Learning by Doing at the Farm Oct 18 2022 Literary Nonfiction. Cultural Studies. Art, Architecture & Urban Planning. California Interest. Beginning in 1968, the University of California, Irvine, was host to an experiment in intercultural exchange and artistic and social scientific learning through practice. Located on the edges of William Pereira’s California Brutalist campus, the Farm was a space for craftspeople from Guatemala, Mexico, and Samoa to demonstrate their skills; a laboratory for new methods in education and research; and an unexpected countercultural gathering site. *LEARNING BY DOING AT THE FARM* reflects upon this unusual experiment, which brought together Cold War politics, modern development, and indigenous peoples drawn into the strange intellectual and cultural circumstances of 1960s California. Through a critical introduction and previously unpublished archival documentation, this book offers a glimpse of various actors’ dreams of what the Farm could become and the collaborations that actually unfolded there. About the editors: Robert Kett’s research centers on artistic and scientific knowledge-making in Mexico and the United States. His current project connects histories of archaeology, oil geology, biological sciences, and Pan-American art in twentieth-century southern Mexico to consider their collective role in the constitution of natural/cultural resources and the region itself. Kett is a doctoral candidate in anthropology at the University of California, Irvine. Anna Kryczka’s research focuses on the criticism and display of mid-century American art, design, media, material culture, and architecture. Her current project examines how Cold War taste cultures shaped and were shaped by sixties discourse around domesticity, expertise, and national belonging. Kryczka holds an MA in art history, theory, and criticism from the School of the Art Institute of Chicago, and is a doctoral candidate in visual studies at the University of California, Irvine.

John Dewey’s Democracy and Education Jan 09 2022 John Dewey’s *Democracy and Education* is the touchstone for a great deal of modern educational theory. It covers a wide range of themes and issues relating to education, including teaching, learning, educational environments, subject matter, values, and the nature of work and play. This Handbook is designed to help experts and non-experts to navigate Dewey’s text. The authors are specialists in the fields of philosophy and education; their chapters offer readers expert insight into areas of Dewey work that they know well and have returned to time and time again throughout their careers. The Handbook is divided into two parts. Part I features short companion chapters corresponding to each of Dewey’s chapters in *Democracy and Education*. These serve to guide readers through the complex arguments developed in the book. Part II features general articles placing the book into historical, philosophical and practical contexts and highlighting its relevance today.

FreeCAD 0.19 Learn By Doing Feb 27 2021 This book is written to help new users learn the basic concepts of FreeCAD. FreeCAD is easy-to-use CAD software that includes tools that are available in premium CAD software. It is a good beginning for those new to FreeCAD to become familiar with the software's user interface, essential tools, and techniques. You will have a clear understanding of the FreeCAD interface and the most widely used tools for component design, assembly, and detailing after completing this book. Table contents Getting Started with FreeCAD Sketch Techniques Extrude and Revolve features Placed Features Patterned Geometry Sweep Features Loft Features Modifying Parts Assemblies Drawings

Doing Research to Improve Teaching and Learning Feb 22 2023 Given the increased accountability at the college and university level, one of the most promising ways for faculty at institutions of higher education to improve their teaching is to capitalize upon their skills as researchers. This book is a step-by-step guide for doing research to inform and improve teaching and learning. With background and instruction about how to engage in these methodologies—including qualitative, quantitative, and mixed methods—Doing Research to Improve Teaching and Learning provides examples across disciplines of how to use one's research skills to improve teaching. This valuable resource equips faculty with the skills to collect and use different types of research evidence to improve teaching and learning in any college and university classroom. Special Features: Chapter openers highlight the questions and issues that will be addressed in each chapter. Recurring text boxes provide authentic examples from actual research studies, student work, and instructor reflections. Coverage of challenges, key successes, and lessons learned from classroom research presents a nuanced and complete understanding of the process.

Learning by Doing Sep 24 2020 Designed for learning professionals and drawing on both game creators and instructional designers, Learning by Doing explains how to select, research, build, sell, deploy, and measure the right type of educational simulation for the right situation. It covers simple approaches that use basic or no technology through projects on the scale of computer games and flight simulators. The book role models content as well, written accessibly with humor, precision, interactivity, and lots of pictures. Many will also find it a useful tool to improve communication between themselves and their customers, employees, sponsors, and colleagues. As John Con é , former chief learning officer of Dell Computers, suggests, “ Anyone who wants to lead or even succeed in our profession would do well to read this book. ”

Experiential Learning Oct 26 2020 Experiential learning is a singularly powerful approach to teaching and learning that is based on the fact that people learn best through experience. In this extensively updated book, the author offers the most complete and up-to-date statement of the theory of experiential learning and its modern applications in education, work, and adult development.

The Book of Learning and Forgetting Sep 05 2021 In this thought-provoking book, Frank Smith explains how schools and educational authorities systematically obstruct the powerful inherent learning abilities of children, creating handicaps that often persist through life. The author eloquently contrasts a false and fabricated “ official theory ” that learning is work (used to justify the external control of teachers and students through excessive regulation and massive testing) with a correct but officially suppressed “ classic view ” that learning is a social process that can occur naturally and continually through collaborative activities. This book will be crucial reading in a time when national authorities continue to blame teachers and students for alleged failures in education. It will help educators and parents to combat sterile attitudes toward teaching and learning and prevent current practices from doing further harm.

Experience And Education Dec 28 2020 Experience and Education is the best concise statement on education ever published by John Dewey, the man acknowledged to be the pre-eminent educational theorist of the twentieth century. Written more than two decades after Democracy and Education (Dewey's most comprehensive statement of his position in educational philosophy), this book demonstrates how Dewey reformulated his ideas as a result of his intervening experience with the progressive schools and in the light of the criticisms his theories had received. Analyzing both "traditional" and "progressive" education, Dr. Dewey here insists that neither the old nor the new education is adequate and that each is miseducative because neither of them applies the principles of a carefully developed philosophy of experience. Many pages of this volume illustrate Dr. Dewey's ideas for a philosophy of experience and its relation to education. He particularly urges that all teachers and educators looking for a new movement in education should think in terms of the deeped and larger issues of education rather than in terms of some divisive "ism" about education, even such an "ism" as "progressivism." His philosophy, here expressed in its most essential, most readable form, predicates an American educational system that respects all sources of experience, on

that offers a true learning situation that is both historical and social, both orderly and dynamic.

I Learn by Doing May 13 2022 Book content preview at <https://lidiastanton.com> This funny comic book is a take on a 'whodunnit' story and a platform for introducing children to multisensory strategies for learning spellings, directions, days of the week, months of the year and other sequences that have to be recalled in order. Children (aged 6-10) can read the book independently or with the help of an adult (through paired reading). Additional explanatory pages ("Did you know?" and "Things you can try out") assist the child and their helper at home in understanding what multisensory learning is and why it works. Practical suggestions extend to difficult homework situations - in which many children often feel frustrated - to enable them to experience success and enjoy learning at home. 'I learn by doing' is a particularly useful tool for children with dyslexia and ADHD. It validates their perception that some seemingly easy everyday school things can in fact be very difficult. The book offers young readers a solution. It reveals how play - something they engage in every day - can be a powerful learning strategy, and shows how to master a newly acquired skill by practice (overlearning). The book leaves the reader with Mr Pug's poignant exchange with Luke: "No matter who's there to help you - a wizard dog, their favourite squeak, your Dad, or your best friend and her cuddly toy with 8 arms - you can do amazing things yourself." "Once I've had a go at something really hard to learn, done something with it that made me and others smile, and practised until I've nailed it - I then feel so big and mighty that people ask: "Is this boy a wizard?" "I am Luke," I say to them, "I learn by doing." Synopsis Luke discovers that his dog, Mr Pug, is a wizard. Mr Pug shows Luke how to remember 'hard school things' and helps him learn tricky spellings. Things take an unexpected turn when Sophie visits Luke and her bag of wooden letters goes missing. Luke learns that it takes more than Mr Pug's magic to save the day.

Encyclopedia of the Sciences of Learning Dec 20 2022 Over the past century, educational psychologists and researchers have posited many theories to explain how individuals learn, i.e. how they acquire, organize and deploy knowledge and skills. The 20th century can be considered the century of psychology on learning and related fields of interest (such as motivation, cognition, metacognition etc.) and it is fascinating to see the various mainstreams of learning, remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology. Beyond folk psychology and its naïve theories of learning, psychological learning theories can be grouped into some basic categories, such as behaviorist learning theories, connectionist learning theories, cognitive learning theories, constructivist learning theories, and social learning theories. Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines, such as philosophy and epistemology, education, information science, biology, and – as a result of the emergence of computer technologies – especially also in the field of computer sciences and artificial intelligence. As a consequence, machine learning struck a chord in the 1980s and became an important field of the learning sciences in general. As the learning sciences became more specialized and complex, the various fields of interest were widely spread and separated from each other; as a consequence, even presently, there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely. The Encyclopedia of the Sciences of Learning provides an up-to-date, broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields, including relevant areas of instruction, pedagogy, cognitive sciences, and especially machine learning and knowledge engineering. This modern compendium will be an indispensable source of information for scientists, educators, engineers, and technical staff active in all fields of learning. More specifically, the Encyclopedia provides fast access to the most relevant theoretical terms provides up-to-date, broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies; supplies clear and precise explanations of the theoretical terms, cross-references to related entries and up-to-date references to important research and publications. The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning; the entries are written by a distinguished panel of researchers in the various fields of the learning sciences.

Learning How to Learn Jun 02 2021 A surprisingly simple way for students to master any subject--based on one of the world's most popular online courses and the bestselling book A Mind for Numbers A Mind for Numbers and its wildly popular online companion course "Learning How to Learn" have empowered more than two million learners of all ages from around the world to master subjects that they once struggled with. Fans often wish they'd discovered these learning strategies earlier and ask how they can help their kids master these skills as well. Now in this new book for kids

and teens, the authors reveal how to make the most of time spent studying. We all have the tools to learn what might not seem to come naturally to us at first--the secret is to understand how the brain works so we can unlock its power. This book explains: Why sometimes letting your mind wander is an important part of the learning process How to avoid "rut think" in order to think outside the box Why having a poor memory can be a good thing The value of metaphors in developing understanding A simple, yet powerful, way to stop procrastinating Filled with illustrations, application questions, and exercises, this book makes learning easy and fun.

How People Learn Mar 23 2023 First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do--with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

How Learning Works Jul 03 2021 Praise for *How Learning Works* "How Learning Works is the perfect title for this excellent book. Drawing upon new research in psychology, education, and cognitive science, the authors have demystified a complex topic into clear explanations of seven powerful learning principles. Full of great ideas and practical suggestions, all based on solid research evidence, this book is essential reading for instructors at all levels who wish to improve their students' learning." —Barbara Gross Davis, assistant vice chancellor for educational development, University of California, Berkeley, and author, *Tools for Teaching* "This book is a must-read for every instructor, new or experienced. Although I have been teaching for almost thirty years, as I read this book I found myself resonating with many of its ideas, and I discovered new ways of thinking about teaching." —Eugenia T. Paulus, professor of chemistry, North Hennepin Community College, and 2008 U.S. Community Colleges Professor of the Year from The Carnegie Foundation for the Advancement of Teaching and the Council for Advancement and Support of Education "Thank you Carnegie Mellon for making accessible what has previously been inaccessible to those of us who are not learning scientists. Your focus on the essence of learning combined with concrete examples of the daily challenges of teaching and clear tactical strategies for faculty to consider is a welcome work. I will recommend this book to all my colleagues." —Catherine M. Casserly, senior partner, The Carnegie Foundation for the Advancement of Teaching "As you read about each of the seven basic learning principles in this book, you will find advice that is grounded in learning theory, based on research evidence, relevant to college teaching, and easy to understand. The authors have extensive knowledge and experience in applying the science of learning to college teaching, and they graciously share it with you in this organized and readable book." —From the Foreword by Richard E. Mayer, professor of psychology, University of California, Santa Barbara; coauthor, *e-Learning and the Science of Instruction*; and author, *Multimedia Learning*

Learning by Doing May 25 2023 Designed for learning professionals and drawing on both game creators and instructional designers, *Learning by Doing* explains how to select, research, build, sell, deploy, and measure the right type of educational simulation for the right situation. It covers simple approaches that use basic or no technology through projects on the scale of computer games and flight simulators. The book role models content as well, written accessibly with humor, precision, interactivity, and lots of pictures. Many will also find it a useful tool to improve communication between themselves and their customers, employees, sponsors, and colleagues. As John Con é , former chief learning officer of Dell Computers, suggests, " Anyone who wants to lead or even succeed in our

profession would do well to read this book. ”

Learning by Doing Jun 21 2020 This volume is part of a series of 18 monographs on service learning and the academic disciplines. It is designed to (1) develop a theoretical framework for service learning in accounting consistent with the goals identified by accounting educators and the recent efforts toward curriculum reform, and (2) describe specific active learning strategies that are useful and powerful teaching tools. Part 1, "Theoretical Essays on Service-Learning in Accounting," includes: "Service-Learning: An Active-Learning Approach for Accounting Education" (D.V. Rama); "Service-Learning: The Accountants for the Public Interest Perspective" (Wayne G. Bremser); "'What I Do, I Understand': Service-Learning in Accounting Curricula" (William L. Weis); and "Service-Learning in Accounting: A Department Chair's Perspective" (Alfonso R. Oddo). Part 2, "Implementation Approaches," includes: "Service-Learning: A 'Free Enterprise' Model for Accounting Faculty" (Curtis L. DeBerg); "Expanding the Boundaries of Accounting Education through Service-Learning" (Lynn M. Pringle); "Service-Learning in Accounting: A Role for VITA Tax Programs" (Janice Carr); "Tax Assistance Program Provides Service-Learning at Notre Dame and St. Mary's College" (Ken Milani); "Volunteer Income Tax Assistance and the Use of Technology" (Nathan Oestreich, Carol Venable, and Martha Doran); "Service-Learning Project in the Accounting Information Systems Course: Implementation without the Benefit of Hindsight" (Alfred R. Michenzi); "Reaching Our Goals Together in Service-Learning: A Multi-Semester Accounting Information Systems Course Implementation" (Margarita Maria Lenk); "Service-Learning in a Capstone Course" (James W. Woolley); "Teaching Professional Accounting Ethics with Service-Learning" (Susan P. Ravenscroft); "Student Consulting Organizations: An Alternative Approach to Service-Learning" (Timothy S. Mech); and "Service-Learning Projects in Accounting: Implementation Strategies" (D.V. Rama). An Afterword by Paul Locatelli is titled: "Service-Learning in Accounting Education." A 37-item annotated bibliography is included. (All papers include references.) (SM)

Learning and Understanding May 01 2021 This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

Systematic Reviews in Educational Research Aug 24 2020 In this open access edited volume, international researchers of the field describe and discuss the systematic review method in its application to research in education. Alongside fundamental methodical considerations, reflections and practice examples are included and provide an introduction and overview on systematic reviews in education research.

Learning by Doing Aug 28 2023 Continuous and sustainable school improvement requires three ingredients: a shared language, an empowered leadership group, and time. This book offers a clear process for bringing these essential ingredients together.

Democracy and Education Dec 08 2021 In this book, Dewey tries to criticize and expand on the educational philosophies of Rousseau and Plato. Dewey's ideas were seldom adopted in America's public schools, although a number of his prescriptions have been continually advocated by those who have had to teach in them.

My Pedagogic Creed, by Prof. John Dewey; Also, the Demands of Sociology Upon Pedagogy, by Prof. Albion W. Small. Nov 07 2021

Communities of Practice Sep 17 2022 This book presents a theory of learning that starts with the assumption that engagement in social practice is the fundamental process by which we get to know what we know and by which we become who we are. The primary unit of analysis of this process is neither the individual nor social institutions, but the informal 'communities of practice' that people form as they pursue shared enterprises over time. To give a social account of learning, the theory explores in a systematic way the intersection of issues of community, social practice, meaning, and identity. The result is a broad framework for thinking about learning as a process of social participation. This ambitious but thoroughly accessible framework has relevance for the practitioner as well as the theoretician, presented with all the breadth, depth, and rigor necessary to address such a complex and yet profoundly human topic.

Learn Better Nov 19 2022 For centuries, experts have argued that learning was about memorizing information: You're supposed to study facts, dates, and details; burn them into your memory; and then apply that knowledge at opportune times. But this approach to learning isn't nearly enough for the world that we live in today, and in Learn Better journalist and education researcher Ulrich Boser demonstrates that how we learn can matter just as much as what we learn. In this brilliantly researched book, Boser maps out the new science of learning, showing how simple techniques like comprehension check-ins and making material personally relatable can help people gain expertise in dramatically better ways. He covers six key steps to help you "learn how to learn," all illuminated with fascinating stories like how Jackson Pollock developed his unique painting style and why an ancient Japanese counting device allows kids to do math at superhuman speeds. Boser's witty, engaging writing makes this book feel like a guilty pleasure, not homework. Learn Better will revolutionize the way students and society alike approach learning and makes the case that being smart is not an innate ability—learning is a skill everyone can master. With Boser as your guide, you will be able to fully capitalize on your brain's remarkable ability to gain new skills and open up a whole new world of possibilities.

Professional Learning Communities at Work Jan 21 2023 Provides specific information on how to transform schools into results-oriented professional learning communities, describing the best practices that have been used by schools nationwide.

Revisiting Professional Learning Communities at Work Jan 29 2021 This 10th-anniversary sequel to the authors' best-selling book Professional Learning Communities at Work™: Best Practices for Enhancing Student Achievement merges research, practice, and passion. The most extensive, practical, and authoritative PLC resource to date, it goes further than ever before into best practices for deep implementation, explores the commitment/consensus issue, and celebrates successes of educators who are making the journey.

Assessment, Equity, and Opportunity to Learn Jun 14 2022 Providing all students with a fair opportunity to learn (OTL) is perhaps the most pressing issue facing U.S. education. Moving beyond conventional notions of OTL — as access to content, often content tested; access to resources; or access to instructional processes — the authors reconceptualize OTL in terms of interaction among learners and elements of their learning environments. Drawing on socio-cultural, sociological, psychometric, and legal perspectives, this book provides historical critique, theory and principles, and concrete examples of practice through which learning, teaching, and assessment can be re-envisioned to support fair OTL for all students. It offers educators, researchers, and policy analysts new to socio-cultural perspectives an engaging introduction to fresh ideas for conceptualizing, enhancing, and assessing OTL; encourages those who already draw on socio-cultural resources to focus attention on OTL and assessment; and nurtures collaboration among members of discourse communities who have rarely engaged one another's work.

Learning to Improve Apr 12 2022 As a field, education has largely failed to learn from experience. Time after time, promising education reforms fall short of their goals and are abandoned as other promising ideas take their place. In Learning to Improve, the authors argue for a new approach. Rather than "implementing fast and learning slow," they believe educators should adopt a more rigorous approach to improvement that allows the field to "learn fast to implement well." Using ideas borrowed from improvement science, the authors show how a process of disciplined inquiry can be combined with the use of networks to identify, adapt, and successfully scale up promising interventions in education. Organized around six core principles, the book shows how "networked improvement communities" can bring together researchers and practitioners to accelerate learning in key areas of education. Examples include efforts to address the high rates of failure among students in community college remedial math courses and strategies for improving feedback to novice teachers. Learning to Improve offers a new paradigm for research and development in education that promises to be a powerful driver of improvement for the nation's schools and colleges.

How Students Learn Apr 19 2020 How Students Learn: Science in the Classroom builds on the discoveries detailed in the best-selling How People Learn. Now these findings are presented in a way that teachers can use immediately, to revitalize their work in the classroom for even greater effectiveness. Organized for utility, the book explores how the principles of learning can be applied in science at three levels: elementary, middle, and high school. Leading educators explain in detail how they developed successful curricula and teaching approaches, presenting strategies that serve as models for curriculum development and classroom instruction. Their recounting of personal teaching experiences lends strength and warmth to this volume. This book discusses how to build straightforward science experiments into true understanding of scientific principles. It also features illustrated suggestions for classroom activities.

How People Learn II Mar 31 2021 There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.
