Data Analysis in Molecular Biology and Evolution Sep 02 2021 Data Analysis in Molecular Biology and Evolution introduces biologists to DAMBE, a proprietary, user-friendly computer program for molecular data analysis. The unique combination of this book and software will allow biologists not only to understand the rationale behind a variety of computational tools in molecular biology and evolution, but also to gain instant access to these tools for use in their laboratories. Data Analysis in Molecular Biology and Evolution serves as an excellent resource for advanced level undergraduates or graduates as well as for professionals working in the field.

No Picnic on Mount Kenya Jun 23 2023 A rediscovered mountaineering classic and the extraordinary true story of a daring escape up Mount Kenya by three prisoners of war. When the clouds covering Mount Kenya part one morning to reveal its towering peaks for the first time, prisoner of war Felice Benuzzi is transfixed. The tedium of camp life is broken by the beginnings of a sudden idea - an outrageous, dangerous, brilliant idea. There are not many people who would break out of a P.O.W. camp, trek for days across perilous terrain before climbing the north face of Mount Kenya with improvised equipment, meagre rations, and with a picture of the mountain on a tin of beef among their more accurate guides. There are probably fewer still who would break back in to the camp on their return. But this is the remarkable story of three such men. No Picnic on Mount Kenya is a powerful testament to the human spirit of revolt and adventure in even the darkest of places. "The history of mountaineering can hardly present a parallel to this mad but thrilling escapade" - Saturday Review "A most extraordinary prisoner-of-war and escape story" - New Yorker "A mad venture and a gallant tribute to man's deep yearning for freedom" - Kirkus Reviews "The book crackles with the same dry humour as its title. It contains the prison-yard bartering and candlelight stitching that mark a classic jailbreak yarn; the encounters with wild beasts in Mount Kenya's forest belt are as gripping, and the descriptions of sparkling glaciers as awe-inspiring, as any passage in the great exploration diaries of the early 20th century" - The Economist

*Achtung-Panzer!* Mar 20 2023 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Is the Devil a Gentleman? (Fantasy and Horror Classics) Dec 25 2020 Seabury Quinn was one of the most popular pulp authors of the early 20th century. Set in the aftermath of the Salem Witch Trials, 'Is the Devil a Gentleman?' is one of his best tales. Many of the demonic and thriller stories, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are

republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Collier's Guide to Night Photography in the Great Outdoors - 2nd Edition Jan 18 2023 The night sky may be the most awe-inspiring spectacle that any of us will ever see. It can, however, be difficult to capture in a photograph, as it requires specialized techniques that are rarely used when shooting images during the day. Renowned photographer Grant Collier sheds light on how to capture these otherworldly images by sharing secrets he has learned over the past 14 years. He explains how to take photos of the Milky Way, northern lights, meteors, eclipses, lightning, and much more. Grant begins by reviewing equipment and supplies that are helpful when photographing at night. He then discusses many software programs, web sites, and mobile apps that will help you plan your shots. Finally, he offers extensive advice on how to capture and process images at night. He goes beyond the basics and teaches how to blend multiple exposures and create huge stitched images to capture incredibly detailed photos that you never before thought possible! The 2nd Edition has been completely updated and includes 50 new images. The sections on cameras and lenses have been rewritten and now includes tables to make it easier see all of the recommended gear. All of the web links have been updated, and include many new websites you can use to plan your photos. All information on post-processing has been updated for use with Photoshop and Lightroom CC 2020. This includes some powerful new techniques for blending multiple exposures taken at night. There is also new information on Photoshop plug-ins and other software that is useful for night photography.

*Tourism Research Paradigms* Aug 01 2021 The theme of this book focuses on the being of tourism and knowledge construction in tourism. The Crossley ID Guide: Raptors May 30 2021 Part of the revolutionary "Crossley ID Guide" series, this is the first raptor guide with lifelike scenes composed from multiple photographs--scenes that allow you to identify raptors just as the experts do. Experienced birders use the most easily observed and consistent characteristics--size, shape, behavior, probability, and general color patterns. The book's 101 scenes--including thirty-five double-page layouts--provide a complete picture of how these features are all related. Even the effects of lighting and other real-world conditions are illustrated and explained. Detailed and succinct accounts from two of North America's foremost raptor experts, Jerry Liguori and Brian Sullivan, stress the key identification features. This complete picture allows

everyone from beginner to expert to understand and enjoy what he or she sees in the field. The mystique of bird identification is eliminated, allowing even novice birders to identify raptors quickly and simply. Comprehensive and authoritative, the book covers all thirty-four of North America's diurnal raptor species (all species except owls). Each species is featured in stunning color plates that show males and females, in a full spectrum of ages and color variants, depicted near and far, in flight and at rest, and from multiple angles, all caught in their typical habitats. There are also comparative, multispecies scenes and mystery photographs that allow readers to test their identification skills, along with answers and full explanations in the back of the book. In addition, the book features an introduction, and thirty-four color maps accompany the plates. Whether you are a novice or an expert, this one-of-a-kind guide will show you an entirely new way to look at these spectacular birds. The most complete guide to North American raptors, written by some of the foremost experts The first raptor guide using Richard Crossley's acclaimed, innovative composite images that show birds as they actually appear in the field 101 stunning color plates--including thirty-five double-page layouts--composed from thousands of photographs Comparative, multispecies plates and photos of mystery species that allow readers to test their growing identification skills Complete with introduction, 34 color maps, and detailed species accounts

Shaping Light in Nonlinear Optical Fibers Jun 30 2021 This book is a contemporary overview of selected topics in fiber optics. It focuses on the latest research results on light wave manipulation using nonlinear optical fibers, with the aim of capturing some of the most innovative developments on this topic. The book's scope covers both fundamentals and applications from both theoretical and experimental perspectives, with topics including linear and nonlinear effects, pulse propagation phenomena and pulse shaping, solitons and rogue waves, novel optical fibers, supercontinuum generation, polarization management, optical signal processing, fiber lasers, optical wave turbulence, light propagation in disordered fiber media, and slow and fast light. With contributions from leading-edge scientists in the field of nonlinear photonics and fiber optics, they offer an overview of the latest advances in their own research area. The listing of recent research papers at the end of each chapter is useful for researchers using the book as a reference. As the book addresses fundamental and practical photonics problems, it will also be of interest to, and benefit, broader academic communities, including areas such as nonlinear science, applied mathematics and physics, and optical engineering. It offers the reader a wide and critical overview of the state-of-the-art within this practical - as well as fundamentally important and interesting - area of modern science, providing a useful reference which will encourage further research and advances in the field.

*Camera Crazy* Feb 24 2021 For the past 30 years, I've been taking photos of people with cameras when on location, at home, and in my studio. During this time my camera collection has grown to over one hundred, and I still use every one of them! I got my first in 1965: a Nikon F. Next was a Leica M-2 with a Summicron 35mm lens. Soon after I moved into larger formats. First came a Graflex 4 x 5 and a Rolleiflex. Then Hasselblads, Linhofs and Mamiyas. My most recent purchase is a digital Olympus that I love to use for personal work. They are all close friends. I am truly camera crazy! I think the pictures in this book reflect that I am not the only one! --Arthur Elgort A master of the snapshot aesthetic, Arthur Elgort is one of the most famous camera-toting people in the world. In *Camera Crazy*, he

takes pictures of other camera-toting people, from children to supermodels, from strangers back to himself. There's Cindy Crawford and Richard Gere, cameras at the ready. There's a crowd of paparazzi. It's an endless and ever-growing sea of lenses, this camera crazy culture of ours. Sometimes it seems as if we can't even see unless it's through a lens! And who better to capture the contemporary zeitgeist than the maestro of the framed moment: Arthur Elgort.

Geometrid moths of the world : a catalogue (Lepidoptera, Geometridae)  
Feb 07 2022 The Geometridae is one of the most species-rich families of Lepidoptera. This 2 volume work is the first comprehensive catalogue of the 35 000 names of these insects. The primary purpose of the work is to provide a substantial body of taxonomic information, much of it previously unpublished, on the available names of the Geometridae. The catalogue is based on the most complete world classification of the geometrids, the card index to genera and species in The Natural History Museum, London. The two volumes include information on type specimens, type localities and, where possible, larval foodplants. A CD-ROM listing all species referred to in the two text volumes is included with the package and will be of great value to verify valid names and to check spelling.
