Adjudicating Climate Change Jul 01 2021 Courts have emerged as a crucial battleground in efforts to regulate climate change. Over the past several years, tribunals at every level of government around the world have seen claims regarding greenhouse gas emissions and impacts. These cases rely on diverse legal theories, but all focus on government regulation of climate change or the actions of major corporate emitters. This book explores climate actions in state and national courts, as well as international tribunals, in order to explain their regulatory significance. It demonstrates the role that these cases play in broader debates over climate policy and argues that they serve as an important force in pressuring governments and emitters to address this crucial problem. As law firms and public interest organizations increasingly develop climate practice areas, the book serves as a crucial resource for practitioners, policymakers and academics.

**Epigrams from the Anthologia Latina Feb 25 2021
This new scholarly edition consists of the Latin**

text, with translation and detailed commentary, of a sequence of epigrams from the Anthologia Latina (Shackleton Bailey 78-188). The introduction discusses whether these epigrams constitute a unified collection and are the work of a single author, examines their likely date and place of composition - which, it is argued, is North Africa under Vandal rule -, and sets them in their cultural context. The line-by-line commentary covers issues of literary, linguistic and historical significance. Although text and interpretation of these pieces present frequent difficulties, the author confirms that they make up a fascinating collection of considerable importance and merit, contrary to the low reputation generally associated with the Anthologia Latina. The book will be of great interest to students of Latin literature and language in general, the epigram tradition in particular, and the culture of Vandal Africa.

The Serpent's Gift Jan 19 2023 "Because thou hast done this, thou art cursed above all cattle, and above every beast of the field." With those words in Genesis, God condemns the serpent for tempting Adam and Eve, and the serpent has shouldered the blame ever since. But how would the study of

religion change if we looked at the Fall from the snake's point of view? Would he appear as a bringer of wisdom, more generous than the God who wishes to keep his creation ignorant? Inspired by the early Gnostics who took that startling view, Jeffrey J. Kripal uses the serpent as a starting point for a groundbreaking reconsideration of religious studies and its methods. In a series of related essays, he moves beyond both rational and faith-based approaches to religion, exploring the erotics of the gospels and the sexualities of Jesus, John, and Mary Magdalene. He considers Feuerbach's Gnosticism, the untapped mystical potential of comparative religion, and even the modern mythology of the X-Men. Ultimately, *The Serpent's Gift* is a provocative call for a complete reorientation of religious studies, aimed at a larger understanding of the world, the self, and the divine.

Understanding the Commercial General Liability Policy Jan 27 2021 The Commercial General Liability (CGL) Insurance Policy is the standard business policy used to pay claims for bodily injury or property damage to others. The policy is divided into three coverage sections-each with its own

exclusions-and a supplementary payments section. Do you ever hear-or worry-that an insurance company will not pay a claim because coverage is excluded? In order to know how claims are paid, you need to understand the policy's insuring agreements and exclusions. In this book, attorney and insurance professional Dwight M. Kealy explains the insuring agreements in Coverage A, B, and C. He gives memorable examples of every standard exclusion-and some significant non-standard exclusions. He explains every supplementary payment, and he explains how policy limits impact how claims are paid.

A Paraphrase and Notes on the First Epistle of St. Peter Aug 02 2021

Valentinus' Legacy and Polyphony of Voices Jul 13 2022 This book challenges the popular use of 'Valentinian' to describe a Christian school of thought in the second century CE by analysing documents ascribed to 'Valentinians' by early Christian Apologists, and more recently by modern scholars after the discovery of codices near Nag Hammadi in Egypt. To this end, Ashwin-Siejkowski highlights the great diversity of views among Christian theologians associated with the label

'Valentinian', demonstrating their attachment to the Scriptures and Apostolic traditions as well as their dialogue with Graeco-Roman philosophies of their time. Among the various themes explored are 'myth' and its role in early Christian theology, the familiarity of the Gospel of Truth with Alexandrian exegetical tradition, Ptolemy's didactic in his letter to Flora, the image of the Saviour in the Interpretation of Knowledge, reception of the Johannine motifs in Heracleon's commentary and the Tripartite Tractate, salvation in the Excerpts from Theodotus, Christian identity in the Gospel of Philip, and reception of selected Johannine motifs in 'Valentinian' documents. Valentinus' Legacy and Polyphony of Voices will be an invaluable and accessible resource to students, researchers, and scholars of Early Christian theologies, as well as trajectories of exegesis in New Testament sources and the emerging of different Christian identities based on various Christologies.

The Floating Pool Lady Apr 10 2022 Why on earth would anyone want to float a pool up the Atlantic coastline to bring it to rest at a pier on the New York City waterfront? In The Floating Pool Lady, Ann L. Buttenwieser recounts her triumphant adventure that started in the bayous of Louisiana and ended with a self-sustaining, floating swimming pool moored in New York Harbor. When Buttenwieser decided something needed to be done to help revitalize the New York City waterfront, she reached into the city's nineteenth-century past for inspiration. Buttenwieser wanted New Yorkers to reestablish their connection to their riverine surroundings and she was energized by the prospect of city youth returning to the Hudson and East Rivers. What she didn't suspect was that outfitting and donating a swimming facility for free enjoyment by the public would turn into an almost-Sisyphean task. As she describes in The Floating Pool Lady, Buttenwieser battled for years with politicians and struggled with bureaucrats as she brought her "crazy" scheme to fruition. From dusty archives in the historic Battery Maritime Building to high-stakes community board meetings to tense negotiations in the Louisiana shipyard, Buttenwieser retells the improbable process that led to a pool named The Floating Pool Lady tying up to a pier at Barretto Point Park in the Bronx, ready

for summer swimmers. Throughout *The Floating Pool Lady*, Bittenwieser raises consciousness about persistent environmental issues and the challenges of developing a constituency for projects to make cities livable in the twenty-first century. Her story and that of her floating pool function as both warning and inspiration to those who dare to dream of realizing innovative public projects in the modern urban landscape.

Tensors: Asymptotic Geometry and Developments 2016-2018 Oct 04 2021 Tensors are used throughout the sciences, especially in solid state physics and quantum information theory. This book brings a geometric perspective to the use of tensors in these areas. It begins with an introduction to the geometry of tensors and provides geometric expositions of the basics of quantum information theory, Strassen's laser method for matrix multiplication, and moment maps in algebraic geometry. It also details several exciting recent developments regarding tensors in general. In particular, it discusses and explains the following material previously only available in the original research papers: (1) Shitov's 2017 refutation of longstanding conjectures of Strassen on rank additivity and Comon on symmetric rank; (2) The 2017 Christandl-Vrana-Zuiddam quantum spectral points that bring together quantum information theory, the asymptotic geometry of tensors, matrix multiplication complexity, and moment polytopes in geometric invariant theory; (3) the use of representation theory in quantum information theory, including the solution of the

quantum marginal problem; (4) the use of tensor network states in solid state physics, and (5) recent geometric paths towards upper bounds for the complexity of matrix multiplication. Numerous open problems appropriate for graduate students and post-docs are included throughout.

Expositio Notarum May 31 2021 This is the first edition of a Latin text unlike any other surviving one : at first sight an extensive, jumbled list of words with explanations, on closer inspection a window on the teaching of Latin shorthand in North Africa c. AD 400, when we find notarii, those trained in shorthand, prominently employed everywhere in state and church. The text reveals in detail how that training could relate to literary

Latin and the classical Roman past. The single manuscript of it in our possession descends from a copy that must have been in Anglo-Saxon England by AD 700, and we can see how it was used for the earliest Latin glossary from that context. The edition seeks to make this story accessible both in general and in detail, with copious indices for those who may wish to consult it from various viewpoints: classical and later Latin, linguistic and historical.
