Abstract: "We present a method for generating polynomially many oblivious transfers using a short 'seed' of initial oblivious transfers. This method is secure in computationally-bounded settings, where adversaries are limited to polynomial-time computations. We show an impossibility result for the information-theoretic case. These results place oblivious transfer on a similar footing with pseudorandom number generation." Our methods include a promising new technique called a locally random reduction, which has given rise not only to efficient solutions for many of the problems considered in this work but to several powerful new results in complexity theory." Abstract: "We show how to exchange private messages with provable security against adaptive attacks. This work provides the first two-party protocol for encrypting messages (or exchanging keys/pads) that are secure against adaptive attacks. It also resolves the decade-long open question of constructing multiparty computations with provable security against adaptive attacks, using neither erasing nor third-party assistance in point-to-point transmissions." Abstract: "We propose a method for three-dimensional animation requiring no special apparatus for viewing. By generating and displaying multiple autostereograms rapidly in succession, the illusions of motion and depth can be achieved on two-dimensional screens such as projector screens, television screens, and computer monitors. We discuss general techniques, algorithms, applications, and limitations." Mining history and general and economic geology of placer deposits. Abstract: "We design a molecular Turing machine and determine the complexity of the problems solvable by molecular computers. In [A94], a combinatorial molecular experiment to solve the NP-complete problem of Hamiltonian Path was proposed and implemented. Using our design, we show that such molecular computers can in fact compute PSPACE, under the generous assumptions

implicit in [A94]. Under stronger and somewhat more practical restrictions, which [A94] fails to satisfy, we show that molecular computers are limited to solving problems in P ." Incorrect proofs of this characterization appeared in [Kushilevitz,1989] and an earlier technical report [Beaver,1989]. We present a different proof which avoids the errors of those works. This report supersedes Harvard Technical Report TR-11-89." Here we show that A can query n oracles B_{1}, \dots, B_n , where n [equals the absolute value of] x , and obtain $f(x)$ while hiding all but n from each B_i , for any boolean function f . This answers a question due to Rivest that was left open in [1]. Our proof adapts techniques developed by Ben-Or, Goldwasser, Wigderson and Chaum, Crépeau, Damgård for using Shamir's secret-sharing scheme to hide information about inputs to distributed computations [2], [4], [6]." It suffices that at most a third or a half of the participants are dishonest. Using previously developed methods for distributed secret computation, we give a solution requiring $O(\log n)$ rounds of interaction. We then give novel techniques to reduce the number of rounds to a constant. These new techniques include computing a random 0-1 secret, taking the multiplicative inverse of a secret, and normalizing a secret (without revealing the result) in a constant expected number of rounds. Such tools allow arbitrary functions over a polynomially sized domain of arguments to be evaluated quickly and efficiently. The methods developed for this paper provide a basis for solutions to other problems in distributed secret computation."

Donald K. "Donnie" Jackson grew up during some of the most impactful years of the Twentieth Century. News of the Vietnam War, the Civil Rights movement, the Cold War, and the race to the moon filled the headlines. However, in his small corner of the world, what mattered most to Donnie and many who lived in that corner of the world with him was the success of the Bluefield High School "Beavers" football program. When the Beavers won their second state title in 1962, Donnie's dad took him to the game at Laidley Field in Charleston, West Virginia, even

though he was only four years old. After that season, he did not miss a Beaver home football game for the next thirteen years. He played in many of them. This is the memoir of Donnie Jackson. The story is seen through the eyes of a young player determined to make a difference for his team. It takes the reader through the ups and downs Donnie experienced on the road to eventually fulfilling his dream and gives the reader far-reaching insight about unrepeatable days in a golden time for playing, coaching, and living the Beaver life. When DONALD THE BEAVER builds his Dream - A BIG BEAUTIFUL WALL, he gets everything he wanted. Does that make him happy? A children's story to about Donald Trump's Wall. Using this technique we give a protocol for multiparty private computation that improves the bound established by previous results [BGW, CCD], which required 3t

The Alsatian Bieber/Beaver clan has contributed significantly to the creation and leadership of over sixty educational and Mainline Protestant institutions in Pennsylvania, North Carolina, the Midwest, and beyond - many of which continue to serve their communities, generation after generation. Past publications have mentioned individual Bieber/Beaver ministers and educators, but this is the first effort to compile their stories collectively, from the 1700's to the present. This work recognizes such leaders' roles in building and sustaining churches and schools, the community centers of early America. (Recipient of a 2022 Book Award from the North Carolina Society of Historians.)

Stephen Donald etched himself into All Blacks folklore with that 'kick' in the 2011 Rugby World Cup final at Eden Park. Donald, one of the country's most popular All Blacks, had not originally been wanted for the World Cup squad. He was whitebaiting in the Waikato and effectively off the rugby grid when the SOS went out for his services. The rest, as they say, is history. That one penalty goal in the final has ensured him a special place in All Blacks history. Now, Donald is combining with the hugely talented rugby writer and commentator Scotty 'Sumo' Stevenson in a book which will cover not only Donald's sporting career and his part in the

All Blacks' historic Cup win, but also poke the borax at both himself and his team mates. Stevenson's unique brand of humour - he collaborated with Cory Jane on the screaming funny Cory Jane: Winging It - will ensure Beaver's book will be one to be both remembered and most feared (especially if you're a high profile teammate!)
