Many institutions use placement tests as a method to assess students' readiness for college-level coursework. With the increased use of technology in testing, many institutions have transitioned placement test administration to an online format in an unproctored setting. While unproctored placement tests may provide financial and logistical benefits for institutions and students, it is important to examine if there are differences in academic outcomes when tests are administered in this format. Guided by the literature on test administration modality (i.e., proctored versus unproctored examinations), I examined if there are differences in math course performance and college student enrollment persistence between students who completed a proctored or unproctored math placement test. To investigate these important educational outcomes, I analyzed data collected as part of a 2018 randomized control trial conducted at a large, urban public institution in the Mid-Atlantic region of the United States in which incoming, first-year students were randomly assigned to a proctored or unproctored group to complete a math placement assessment. The current study affirmed findings from a pilot study, which suggests that students tend to place approximately one course level lower when placed using a proctored math placement test compared to an unproctored placement test and that students tend to have higher final grades in their initial math course when placed by a proctored math placement test. The current study analyzed final grades in the second math course taken between proctored and unproctored groups as well as student persistence. Analyzing mean course grades, I found that differences in grades between students who take a proctored and unproctored math placement test continue in some cases into the second math course. The percentage of F's and withdrawals for initial and second math course final grades between students who take a proctored and unproctored math placement assessment also show differences between groups. Applying hierarchical linear regression, suggests that test administration modality does not account for a significant amount of variance in course grades. When controlling for demographic characteristics and academic factors, performance from the initial course taken, was found to be the most significant factor of grades in second math course taken. Results from the current study suggests that test administration modality during math placement tests while not a statistically significant variable in academic performance in second math course taken, may still be helpful as it is a statistically significant variable in academic performance in the first math course taken. Since initial math course grades were statistically significant in explaining the difference in grades between groups, institutions should consider using proctoring during math placement tests as a practice. Further research should be conducted, however, to understand how test administration modality during placement tests affects students in different programs, including programs that do not require courses along the institution's math course sequence. Additionally, further research on types of proctoring would provide a more comprehensive understanding of the proctoring options available to institutions and whether they result in the same outcomes for students. Published By: The Math Notion www.mathnotion.com Drawn from surveys completed by 122 students enrolled in developmental math at four community colleges and from seven student focus groups with a total of 34 developmental math students at those same colleges, this research brief illuminates student experiences with and perspectives on the math assessment and placement process. Findings suggest that many students who go on to enroll in developmental math are unlikely to prepare for the math placement exam, although most students know ahead of time that they are required to take the exam and many colleges make test preparation materials available. Lack of preparation may undermine students' exam performance and negatively affect the accuracy of their placement. We identify four interconnected reasons why students tend to not prepare for the exam: (1) misperceptions about the stakes of the assessment and placement process, (2) lack of knowledge about preparation materials, (3) misunderstandings about why and how to prepare for a college placement exam, and (4) a deep lack of math confidence. The brief concludes with recommendations for colleges. [This brief is a product of CCRC's Analysis of Statewide Developmental Education Reform (ASDER) research project, which is funded by the Bill & Melinda Gates Foundation.]. Placement testing in college is important partly because initial placement recommendations may be followed by further placement recommendations based on retakes of the placement test. This study examines a particular mathematics retake policy at a community college in Florida which allows students to retake on the mathematics placement test every 90 days. As a result, students may be placed into a particular course and then retake the placement test before the semester ends. It is an increasingly known practice among students that if their retake placement scores place them in a higher course, students sometimes withdraw from their current course and take the higher level course the following semester -- without finishing the course into which they were originally placed. Analysis of the data collected reveals that students who retake the placement exam and test into a subsequent developmental course do worse in the subsequent course than those students who initially placed into that higher level course. Although a relatively small number of students retake the placement test, the study further shows that most of those students do not perform better as a result of the placement retake, and the number that performs better is insignificant. These findings are based on analysis of the sample proportions. Recommendations include changing the college's retake policies. The most significant recommendation permits retakes only before initial enrollment, suggests placing students based on the average of their pre-enrollment placement and retake(s) scores, and defines a stricter time limit on how long placement scores are accepted. The recommendations can serve as an example for other colleges nationwide. Community Colleges in Virginia require new students to take a test for math placement. Often students do poorly on this test just because they are not prepared -- and then they may get set back a semester or even a year taking developmental math. This book explains the answers to the practice questions for the Virginia Community College System's math placement test (for the developmental math section only). Use it to prepare for the test so you can get the score you need to start college taking the math you want. Note: The questions whose answers are explained in this book are not included. To use the book you will need to use the Internet to see the questions. (Or email the author, who will send the questions to you.) Contains explained answers to questions like those that appear on the COMPASS Math Placement Test, covering numerical skills/pre-algebra, algebra, college algebra, geometry, and trigonometry. If you're a student entering community college in Virginia you may be required to take a math placement test. The results of this test will determine whether you need to take remedial math before you can take the courses in your program. Remedial math could set you back a semester or a year in your program. This book is designed to help you prepare for the placement test so you can score well and move quickly toward your goal. It contains solutions--answer explanations--for Northern Virginia Community College's practice questions for the test. Note: Only solutions, not questions, are included in this book. The questions are found online; a link to them can be found in the book's introduction. Placement tests are rapidly joining the ranks of high-stakes testing and college freshmen are required to take mathematics placement exams to determine their first mathematics course upon entering college. Unfortunately, these exams tend to place students in a lower-level or remedial course. As a result, additional expenses are incurred; degree programs are extended; and scholarships, awards, and external funding are less likely. Helping Student Prepare for College Mathematics Placement Tests: A Guide for Teachers and Parents includes two sample placement tests, a guide that shows what entry course a student will be assigned with a given score, and explanations on material that students might have forgotten or never quite understood. This guide is sure to help students excel!
