Examines the perceptions of donors and potential  
customers as to the need for a health  
education/wellness center connected to St. Mary's  
Hospital Ozaukee and whether donors and potential  
customers would fund the start-up costs of such a  
facility through a fundraising campaign. Methodologies  
include literature review, focus groups, and a survey.  
Findings indicate a need for a health  
education/wellness center; interest in a full spectrum of

programming; concern for duplication of services; support from the donor community; and the importance of communications and effective marketing to both internal and external publics to make such a center work to its fullest capacity. The purpose of this study is to compile and synthesize information from existing sources concerning the natural, physical and social components of the ecosystems with the 24-county study area along the coast of Texas. The topics of the socioeconomic papers are oil and gas production, recreation/tourism industry, commercial fishing, transportation, industrial and residential development and agricultural production. Examining what is involved in learning to write for academic purposes from a variety of perspectives, this book focuses in particular on issues related to academic writing instruction in diverse contexts, both geographical and disciplinary. Informed by current theory and research, leading experts in the field explain and illustrate instructional programs, tasks, and activities that help L2/multilingual writers develop knowledge of different genres, disciplinary expectations, and expertise in applying what they have learned in both educational and professional contexts. This two-volume report synthesizes the Asian Development Bank's extensive research on the topic of human trafficking in Asia. Undertaken to help Asian

nations better understand the dynamics of trafficking and to identify the root causes of the practice, this work features analysis of regional legal frameworks, contributing factors, and vulnerabilities. A supplementary report, "Guide for Integrating Trafficking Concerns, provides a series of steps that could be employed to limit trafficking. Designed to effectively guide instructors, Clinical Instruction and Evaluation: A Teaching Resource provides clinical nurses with the theoretical background and practical tools necessary to succeed as a clinical nursing instructor. The theory used to support the practice of clinical education is presented in a straightforward, easily accessed manner. The book offers approaches to structuring clinical experiences for students, evaluating student performance, and solving problems encountered in clinical settings. Examines philanthropic patterns that influence youth kindergarten through 12th grade in order to create a model program that promotes giving among youth. A literature review indicators that predict philanthropic behavior among youth, and that in teaching philanthropy the emphasis must be on the process and on instilling values. Key informant interviews with philanthropists finds evidence of certain factors which influenced participants to become philanthropists. A survey of students in the Anchorage, Alaska, school

district finds that those students are below the national average in volunteer involvement. The author recommends increasing the level of volunteer involvement for Anchorage students and using the service learning model to create more meaningful volunteer experiences. Examines the possibility of introducing a six-week philanthropic curriculum for high school students in the state of Georgia.

Methodologies include a literature review, a survey of teachers, key informant interviews, and a focus group of students. Finds that even if a philanthropy curriculum were available, teachers would not have time, nor in some cases the desire, to teach this subject. Award-winning teachers and key informants express a desire to have such a curriculum available.

Program synthesis is the task of automatically finding a program in the underlying programming language that satisfies the user intent expressed in the form of some specification. Since the inception of artificial intelligence in the 1950s, this problem has been considered the holy grail of Computer Science. Despite inherent challenges in the problem such as ambiguity of user intent and a typically enormous search space of programs, the field of program synthesis has developed many different techniques that enable program synthesis in different real-life application domains. It is now used successfully in software

engineering, biological discovery, compute-raided education, end-user programming, and data cleaning. In the last decade, several applications of synthesis in the field of programming by examples have been deployed in mass-market industrial products. This monograph is a general overview of the state-of-the-art approaches to program synthesis, its applications, and subfields. It discusses the general principles common to all modern synthesis approaches such as syntactic bias, oracle-guided inductive search, and optimization techniques. We then present a literature review covering the four most common state-of-the-art techniques in program synthesis: enumerative search, constraint solving, stochastic search, and deduction-based programming by examples. It concludes with a brief list of future horizons for the field. This book describes a novel strategy to design magnetic paper materials and gain a deeper understanding for the bending behavior of paper-based magnetic actuators upon the application of an external magnetic field. Magnetic paper sheets have been prepared by using different strategies, including the physical entrapment of magnetic beads within surface-attached polymer networks and the covalent attachment of polymer-modified magnetic particles to cellulose fibers. After preparation, the magnetic paper sheets have been characterized with respect to the loading degree,

wetting properties, morphology and magnetism by using different methods. Furthermore, paper-based actuators have been fabricated and the bending behavior of such actuators within an external magnetic field has been studied in detail. Thereby, a simple model has been developed to understand the bending behavior of magnetic paper in more depth. In addition, first concepts for the use of magnetic paper sheets in high-tech applications, including magnetic fluid shutters, that allow the fluid transport between adjacent paper sheets, are described. Based on the prominent themes of public participation and collaboration found in the literature on community capacity, and on the different levels (individual, organizational, community) identified in the literature, in the focus groups and by the research team, it may be concluded that we are all part of the process. [...]

The purpose of the paper is not an evaluation of either the quality of community capacity processes or the achieved outcomes of specific community capacity efforts. [...] The following data were extracted from the documents and entered into the database: 1) the source citation; 2) the type of publication; 3) the definition of community capacity and other related terms; 4) the context, i.e., country, population; 5) the "characteristics" of community capacity, as they fit into a theories of change approach (see Section 2.3 for

more information on the theories of change [...] The results of each focus group were mapped out in the form of a chart, showing the data for each of the parts of the theories of change. [...] The 26 A Synthesis Paper on the Conceptualization and Measurement of Community Capacity UBC Institute of Health Promotion Research September 2003 different types of indicators that are useful (and complementary) for health promotion evaluation are elaborated in a set of two papers, authored by Labonte and Laverack (2001) about the purpose of community capacity, capacity for whom, and the measurement.
