The New Energy Crisis Jun 03 2021 Global warming reveals that world energy consumption is on an unsustainable path. This updated second edition of *The New Energy Crisis* examines the impact of climate change on energy economics and geopolitics, exploring key issues such as energy poverty, renewable and nuclear energy, and focusing on the implications of the Fukushima crisis.

Archaeology Nov 27 2020 The seventh edition of *ARCHAEOLOGY* reflects the most recent research and changes in the field, while making core concepts easy to understand through an engaging writing style, personalized examples, and high-interest topics. This text pairs two of archaeology's most recognized names, Robert L. Kelly and David Hurst Thomas, who together have over 75 years of experience leading excavations. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Human Occupation May 02 2021

An Exposition of the Second Epistle to the Corinthians Feb 23 2023

Dependent Rational Animals Aug 29 2023 According to the author of "After Virtue," to flourish, humans need to develop virtues of independent thought and acknowledged social dependence. This book presents the moral philosopher's comparison of humans to other animals and his exploration of the impact of these virtues.

Economic Review Sep 18 2022

Advanced Human-Robot Collaboration in Manufacturing Apr 20 2020 This book presents state-of-the-art research, challenges and solutions in the area of human-robot collaboration (HRC) in manufacturing. It enables readers to better understand the dynamic behaviour of manufacturing processes, and gives more insight into on-demand adaptive control techniques for industrial robots. With increasing complexity and dynamism in today's manufacturing practice, more precise, robust and practical approaches are needed to support real-time shop-floor operations. This book presents a collection of recent developments and innovations in this area, relying on a wide range of research efforts. The book is divided into five parts. The first part presents a broad-based review of the key areas of HRC, establishing a common ground of understanding in key aspects. Subsequent chapters focus on selected areas of HRC subject to intense recent interest. The second part discusses human safety within HRC. The third, fourth and fifth parts provide in-depth views of relevant methodologies and algorithms. Discussing dynamic planning and monitoring, adaptive control and multi-modal decision making, the latter parts facilitate a better understanding of HRC in real situations. The balance between scope and depth, and theory and applications, means this book appeals to a wide readership, including academic researchers, graduate students, practicing engineers, and those within a variety of roles in manufacturing sectors.

Human Rights and the Body Jul 16 2022 *Human Rights and the Body* is a response to the crisis in human rights, to the very real concern that without a secure foundation for the concept of human rights, their very existence is threatened. While there has been consideration of the discourses of human rights and the way in which the body is written upon, research in linguistics has not yet been fully brought to bear on either human rights or the body. Drawing on legal concepts and aspects of the law of human rights, Mooney aims to provide a universally defensible set of human rights and a foundation, or rather a frame, for them. She argues that the proper frames for human rights are firstly the human body, seen as an index reliant on the natural world, secondly the globe and finally, language. These three frames generate rights to food, water, sleep and shelter, environmental protection and a right against dehumanization. This book is essential reading for researchers and graduate students in the fields of human rights and semiotics of law.

Automation and Utopia Jun 22 2020 Automating technologies threaten to usher in a workless future, but John Danaher argues that this can be a good thing. A world without work may be a kind of utopia, free of the misery of the job and full of opportunities for creativity and exploration. If we play our cards right, automation could be the path to idealized forms of human flourishing.

Cliometrics of the Family Jul 24 2020 This contributed volume applies cliometric methods to the study of family and households in order to derive global patterns and determine their impact on economic development. Family and households are a fundamental feature of societies and economies. They are found throughout history and are the place where key decisions on fertility, labour force participation, education, consumption are made. This is especially relevant for the position of women. The book gathers key insights from a variety of fields – economics, history, demography, anthropology, biology – to shed light on the relation between family organisation and the long-term process of economic development.

Human Capital Feb 11 2022 This book presents a new interpretation of the role of human capital and the state in driving economic development. It places these ideas within broader debates within the history of economic thought to highlight how the nature of economic activity is a collective and coordinated process. Through examining how the welfare state reversed traditional accumulation by relying on human capital growth, the importance of the state within the development process is emphasised, alongside the multifaceted nature of competition. Different forms of public expenditure are then evaluated to identify the most productive forms of public spending and the drivers of long term economic development. This book questions the relationship between profits and rent and proposes a new kind of economic development based around human capital. It will be relevant to students and researchers interested in the history of economic thought, the political economy, and labour economics.

Structural Injustice Apr 01 2021 Madison Powers and Ruth Faden here develop an innovative theory of structural injustice that links human rights norms and fairness norms. Norms of both kinds are grounded in an account of well-being. Their well-being account provides the foundation for human rights, explains the depth of unfairness of systematic patterns of disadvantage, and locates the unfairness of power relations in forms of control some groups have over the well-being of other groups. They explain how human rights violations and structurally unfair patterns of power and advantage are so often interconnected. Unlike theories of structural injustice tailored for largely benign social processes, Powers and Faden's theory addresses typical patterns of structural injustice—those in which the wrongful conduct of identifiable agents creates or sustains mutually reinforcing forms of injustice. These patterns exist both within nation-states and across national boundaries. However, this theory rejects the claim that for a structural theory to be broadly applicable both within and across national boundaries its central claims must be universally endorsable. Instead, Powers and Faden find support for their theory in examples of structural injustice around the world, and in the insights and perspectives of related social movements. Their theory also differs from approaches that make enhanced democratic decision-making or the global extension of republican institutions the centerpiece of proposed remedies. Instead, the theory focuses on justifiable forms of resistance in circumstances in which institutions are unwilling or unable to address pressing problems of injustice. The insights developed in *Structural Injustice* will interest not only scholars and students in a range of disciplines from political philosophy to feminist theory and environmental justice, but also activists and journalists engaged with issues of social justice.

The Contemporary Law Review, with Current English and Foreign Decisions Mar 24 2023

The Cambridge Handbook of Psychology and Human Rights Jan 30 2021 Written by psychologists, historians, and lawyers, this handbook demonstrates the central role psychological science plays in addressing some of the world's most pressing problems. Over 100 experts from around the world work together to supply an integrated history of human rights and psychological science using a rights and strengths-based perspective. It highlights what psychologists have done to promote human rights and what continues to be done at the United Nations. With emerging visions for the future uses of psychological theory, education, evidence-based research, and best practices, the chapters offer advice on how to advance the 2030 Global Agenda on Sustainable Development. Challenging the view that human rights are best understood through a political lens, this scholarly collection of essays shows how psychological science may hold the key to nurturing humanitarian values and respect for human dignity.

Colonial Systems of Control Jun 15 2022 A pioneering book on prisons in West Africa, *Colonial Systems of Control: Criminal Justice in Nigeria* is the first comprehensive presentation of life inside a West African prison. Chapters by prisoners inside Kirikiri maximum security prison in Lagos, Nigeria are published alongside chapters by scholars and activists. While prisoners document the daily realities and struggles of life inside a Nigerian prison, scholar and human rights activist Viviane Saleh-Hanna provides historical, political, and academic contexts and analyses of the penal system in Nigeria. The European penal models and institutions imported to Nigeria during colonialism are exposed as intrinsically incoherent with the community-based conflict-resolution principles of most African social structures and justice models. This book presents the realities of imprisonment in Nigeria while contextualizing the colonial legacies that have resulted in the inhumane brutalities that are endured on a daily basis.

Social Jun 27 2023 We are profoundly social creatures--more than we know. In *Social*, renowned psychologist Matthew Lieberman explores groundbreaking research in social neuroscience revealing that our need to connect with other people is even more fundamental, more basic, than our need for food or shelter. Because of this, our brain uses its spare time to learn about the social world--other people and our relation to them. It is believed that we must commit 10,000 hours to master a skill. According to Lieberman, each of us has spent 10,000 hours learning to make sense of people and groups by the time we are ten. Social argues that our need to reach out to and connect with others is a primary driver behind our behavior. We believe that pain and pleasure alone guide our actions. Yet, new research using fMRI--including a great deal of original research conducted by Lieberman and his UCLA lab--shows that our brains react to social pain and pleasure in much the same way as they do to physical pain and pleasure. Fortunately, the brain has evolved sophisticated mechanisms for securing our place in the social world. We have a unique ability to read other people's minds, to figure out their hopes, fears, and motivations, allowing us to effectively coordinate our lives with one another. And our most private sense of who we are is intimately linked to the important people and groups in our lives. This wiring often leads us to restrain our selfish impulses for the greater good. These mechanisms lead to behavior that might seem irrational, but is really just the result of our deep social wiring and necessary for our success as a species. Based on the latest cutting edge research, the findings in *Social* have important real-world implications. Our schools and businesses, for example, attempt to minimize social distractions. But this is exactly the wrong thing to do to encourage engagement and learning, and literally shuts down the social brain, leaving powerful neuro-cognitive resources untapped. The insights revealed in this pioneering book suggest ways to improve learning in schools, make the workplace more productive, and improve our overall well-being.

Human Nature and Railroads May 14 2022

Gods and Humans in the Ancient Near East May 22 2020 In this book, Tyson Putthoff explores the relationship between gods and humans, and between divine nature and human nature, in the Ancient Near East. In this world, gods lived among humans. The two groups shared the world with one another, each playing a special role in maintaining order in the cosmos. Humans also shared aspects of a godlike nature. Even in their natural condition, humans enjoyed a taste of the divine state. Indeed, gods not only lived among humans, but also they lived inside them, taking up residence in the physical body. As such, human nature was actually a composite of humanity and divinity. Putthoff offers new insights into the ancients' understanding of humanity's relationship with the gods, providing a comparative study of this phenomenon from the third millennium BCE to the first century CE.

Christian Science Sentinel Oct 19 2022

Rehabilitation Required Aug 25 2020

From the Bottom Up Feb 28 2021 Kent Greenawalt's *From the Bottom Up* constitutes a collection of articles and essays written over the last five decades of his career. They cover a wide range of topics, many of which address ties between political and moral philosophy and what the law does and should provide. A broad general theme is that in all these domains, what really is the wisest approach to difficult circumstances often depends on the particular issues involved and their context. Both judges and scholars too often rely on abstract general formulations to provide answers. A notable example in political philosophy was the suggestion of the great and careful scholar, John Rawls, that laws should be based exclusively on public reason. The essays explain that given uncertainty of what people perceive as the line between public reason and their religion convictions, the inability of public reason to resolve some difficulty questions, such as what we owe to higher animals, and the feeling of many that their religious understanding should count, urging exclusive reliance on public reason is not a viable approach. Other essays show similar problems with asserted bases for legal interpretations and the content of provisions such as the First Amendment.

Aid to Families with Dependent Children Dec 29 2020

Strategies for Deconstructing Racism in the Health and Human Services Sep 25 2020 Building on the successful outcomes of a five-year initiative undertaken in New York City, Alma Carten, Alan Siskind, and Mary Pender Greene bring together a national roster of leading practitioners, scholars, and advocates who draw upon extensive practice experiences and original research. Together, they offer a range of strategies with a high potential for creating the critical mass for change that is essential to transforming the nation's health and human services systems. *Strategies for Deconstructing Racism in the Health and Human Services* closes the gap in the literature examining the role of interpersonal bias, structural racism, and institutional racism that diminish service access and serve as the root cause for the persistence of disparate racial and ethnic outcomes observed in the nation's health and human services systems. The one-of-a-kind text is especially relevant today as population trends are dramatically changing the nation's demographic and cultural landscape, while funds for the health and human services diminish and demands for culturally relevant evidence-based interventions increase. The book is an invaluable resource for service providers and educational institutions that play a central role in the education and preparation of the health and human service workforce.

Human Dependence on Nature Jan 22 2023 Written in an accessible and engaging style, Washington provides an excellent overview of humanity's relationship with Nature. The book looks at energy flow, nutrient cycling, ecosystem services, ecosystem collapse, psychological and spiritual dependency. It also examines anthropocentrism and denial as causes of our unwillingness to respect our inherent dependence on the natural environment. The book concludes by bringing these issues together and providing a framework for solutions to the climate change crisis.

The Steward Leader Aug 17 2022 In this book R. Scott Rodin offers a unique and profoundly theologically informed model of leadership forged out of his extensive experience and theological studies. This model is personal, dynamic and transformative for the leaders themselves, for the people they work with and for the institution or organizations in which they serve.

The Contemporary Law Review Apr 25 2023

The Oxford Handbook of Industrial Hubs and Economic Development Oct 27 2020 Industrialization supported by industrial hubs has been widely associated with structural transformation and catch-up. But while the direct economic benefits of industrial hubs are significant, their value lies first and foremost in their contribution as incubators of industrialization, production and technological capability, and innovation. The *Oxford Handbook of Industrial Hubs and Economic Development* adopts an interdisciplinary approach to examine the conceptual underpinnings, review empirical evidence of regions and economies, and extract pertinent lessons for policy researchers and practitioners on the key drivers of success and failure for industrial hubs. This Handbook illustrates the diverse and complex nature of industrial hubs and shows how they promote industrialization, economic structural transformation, and technological catch-up. It explores the implications of emerging issues and trends such as environmental protection and sustainability, technological advancement, shifts in the global economy, and urbanization.

African-Centred Management Education Dec 09 2021 In *African-Centred Management Education*, Professor Abdulai looks critically at the failings of management education in Africa and how that has impacted growth and development efforts, especially at this critical stage in the continent's positive growth and development trajectory. He concludes that Africa's current positive economic growth cannot be sustained without a significant contribution from its human capital. He adds that, the outstanding economic record of Asian economies in recent decades dramatically illustrates how important human capital is to growth. These countries lacking natural resources and importing practically all their energy requirements have grown rapidly by relying on a well-trained, educated and conscientious workforce. Professor Abdulai believes that Africa, too, can sustain its current growth and development by effectively combining its abundant

natural resources with its human capital to attain its economic development, but this will require an African cadre of well-trained managers at the helm of both private and public sector institutions. For this to become a reality, management education in Africa will have to play a significant role, but the author argues that it cannot be effective by continually mimicking the West in the programmes it delivers. It must come up with innovative and relevant pedagogy that will address the special challenges that the continent faces and deliver an African-centred management education. As well as pointing to the failures of management education in Africa, Abdulai offers suggestions as to how to make management education really contribute to the education of Africans, in order to sustain current and future development.

From Neurons to Neighborhoods Sep 06 2021 How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

The Defense of the Reformed Faith Nov 20 2022

Research in Personnel and Human Resources Management Nov 08 2021 Research in Personnel and Human Resources Management is designed to promote theory and research on important substantive and methodological topics in the field of human resources management.

Transferring Human Impedance Regulation Skills to Robots Oct 07 2021 This book introduces novel thinking and techniques to the control of robotic manipulation. In particular, the concept of teleimpedance control as an alternative method to bilateral force-reflecting teleoperation control for robotic manipulation is introduced. In teleimpedance control, a compound reference command is sent to the slave robot including both the desired motion trajectory and impedance profile, which are then realized by the remote controller. This concept forms a basis for the development of the controllers for a robotic arm, a dual-arm setup, a synergy-driven robotic hand, and a compliant exoskeleton for improved interaction performance.

The Safety Anarchist Jul 28 2023 Work has never been as safe as it seems today. Safety has also never been as bureaucratized as it is today. Over the past two decades, the number of safety rules and statutes has exploded, and organizations themselves are creating ever more internal compliance requirements. At the same time, progress on safety has slowed to a crawl. Many incident- and injury rates have flatlined. Worse, excellent safety performance on low-consequence events tends to increase the risk of fatalities and disasters. Bureaucracy and compliance now seem less about managing the safety of the workers we are responsible for, and more about managing the liability of the people they work for. We make workers do a lot that does nothing to improve their success locally. Paradoxically, such tightening of safety bureaucracy robs us of exactly the source of human insight, creativity and resilience that can tell us how success is actually created, and where the next accident may well happen. It is time for Safety Anarchists: people who trust people more than process, who rely on horizontally coordinating experiences and innovations, who push back against petty rules and coercive compliance, and who help recover the dignity and expertise of human work.

Children's Environmental Health Jul 04 2021

Human Performance Improvement Aug 05 2021 Today's dynamic organizations must achieve positive results in record time - a challenge that requires managers to avoid problems before they arise and to solve these issues quickly. Human Performance Improvement (HPI) is a powerful tool that can be used to help build intellectual capital, establish and maintain a 'high-performance workplace, enhance profitability, and encourage productivity' - as well as increase return on equity and improved safety. Written by a group of highly respected authors in the field, this book will show you how to:- discover and analyze performance gaps - plan for future improvements in human performance - design and develop cost-effective interventions to close performance gaps.

How Do Humans Depend On Earth? Mar 12 2022 The Importance Of Plants And Our Dependence On Them Not Only For Food But Also For Our Clean Air And Water Are Discussed In This Title. How Crops And Plants Have Been Genetically Modified To Resist Disease And Insects. The Impact Humans Have On Our Earth And What We Can Do To Reduce The Use Of Our Nonrenewable Resources Are Discussed.

The Core Values of Chinese Civilization Dec 21 2022 Drawing on the core values of western civilization, the author refines the counterparts in Chinese civilization, summarized as four core principles: duty before freedom, obedience before rights, community before individual, and harmony before conflict. Focusing on guoxue or Sinology as the basis of his approach, the author provides detailed explanations of traditional Chinese values. Recent scholars have addressed the concept of guoxue since the modern age, sorting through it and piecing it together, which has produced an extremely abundant range of information. However, given that the concepts and theories involved have been left largely unanalyzed, this book develops a theoretical treatment of them in several important respects. First, it analyzes the mindset of guoxue, examining the dominant ideas and values of the era from which the term "guoxue" arose, focusing on its connection to early changes and trends in society and culture, and distinguishing three key phases of development. Past scholars mainly had in mind the range of objects studied in guoxue when defining it, and what this book underscores is the meaning of guoxue as a modern body of research. Secondly, it assesses several phases in the modern evolution of the body of guoxue research from the beginning to the end of the 20th century, i.e., ending with the later phase of the National Heritage movement. Third and lastly, the book explores the various main modes of modern guoxue, which correspond step by step with the evolutionary phases of guoxue research.

Fostering Home and Community-based Care for Technology-dependent Children Apr 13 2022

The Transhumanism Handbook May 26 2023 Modern humanity with some 5,000 years of recorded history has been experiencing growing pains, with no end in sight. It is high time for humanity to grow up and to transcend itself by embracing transhumanism. Transhumanism offers the most inclusive ideology for all ethnicities and races, the religious and the atheists, conservatives and liberals, the young and the old regardless of socioeconomic status, gender identity, or any other individual qualities. This book expounds on contemporary views and practical advice from more than 70 transhumanists. Astronaut Neil Armstrong said on the Apollo 11 moon landing in 1969, "One small step for a man, one giant leap for mankind." Transhumanism is the next logical step in the evolution of humankind, and it is the existential solution to the long-term survival of the human race.

The Handbook of Evolutionary Psychology, Volume 2 Jan 10 2022 A complete exploration of the real-world applications and implications of evolutionary psychology The exciting and sometimes controversial science of evolutionary psychology is becoming increasingly relevant to more fields of study than ever before. The Handbook of Evolutionary Psychology, Volume 2, Integrations provides students and researchers with new insight into how EP draws from, and is applied in, fields as diverse as economics, anthropology, neuroscience, genetics, and political science, among others. In this thorough revision and expansion of the groundbreaking handbook, luminaries in the field provide an in-depth exploration of the foundations of evolutionary psychology as they relate to public policy, consumer behavior, organizational leadership, and legal issues. Evolutionary psychology seeks to explain the reasons behind friendship, leadership, warfare, morality, religion, and culture — in short, what it means to be human. This enlightening text provides a foundational knowledgebase in EP, along with expert insights and the most up-to-date coverage of recent theories and findings. Explore the vast and expanding applications of evolutionary psychology Discover the psychology of human survival, mating parenting, cooperation and conflict, culture, and more Identify how evolutionary psychology is interwoven with other academic subjects and traditional psychological disciplines Discuss future applications of the conceptual tools of evolutionary psychology As the established standard in the field, The Handbook of Evolutionary Psychology, Volume 2 is the definitive guide for every psychologist and student to understand the latest and most exciting applications of evolutionary psychology.
