Examines the role and reception of monuments in changing multicultural societies. The Neolithic period, when agriculture began and many monuments - including Stonehenge - were constructed, is an era fraught with paradoxes and ambiguities. Starting in the Mesolithic and carrying his analysis through to the Late Bronze Age, Richard Bradley sheds light on this complex period and the changing consciousness of these prehistoric peoples. *The Significance of Monuments* studies the importance of monuments tracing their history from their first creation over six thousand years later. Part One discusses how monuments first developed and their role in developing a new sense of time and space among the inhabitants of prehistoric Europe. Other features of the prehistoric landscape - such as mounds and enclosures - across Continental Europe are also examined. Part Two studies how such monuments were modified and reinterpreted to suit the changing needs of society through a series of detailed case studies. *The Significance of Monuments* is an indispensable text for all students of European prehistory. It is also an enlightening read for professional archaeologists and all those interested in this fascinating period. "This ... assessment of Civil War monuments unveiled in the United States between the 1860s and 1930s argues that they were pivotal to a national embrace of military values. Americans' wariness of standing armies limited construction of war memorials in the early republic, ... and continued to influence commemoration after the Civil War. ... distrust of standing armies gave way to broader enthusiasm for soldiers in the Gilded Age. Some important projects challenged the trend, but many Civil War monuments proposed new norms of discipline and vigor that lifted veterans to a favored political status and modeled racial and class hierarchies. A half century of Civil War commemoration reshaped remembrance of the American Revolution and guided American responses to World War I"-- Minutes from Commission meetings, the Commission's final report and a financial statement. In many societies monuments are associated with dynamic socio-economic and political processes that these societies underwent and/or instrumentalised. Due to the often large human and other resources input involved in their construction and maintenance, such constructions form an useful research target in order to investigate both their associated societies as well as the underlying processes that generated differential construction levels. Monumental constructions may physically remain the same for some time but certainly not forever. The actual meaning, too, that people associate with these may change regularly due to changing contexts in which people perceived, assessed, and interacted with such constructions. These changes of meaning may occur diachronically, geographically but also socially. Realising that such shifts may occur forces us to rethink the meaning and the roles that past technologies may play in constructing, consuming and perceiving something monumental. In fact, it is through investigating the processes, the practices of building and crafting, and selecting the specific locales in which these activities took place, that we can argue convincingly that meaning may already become formulated while the form itself is still being created. As such, meaning-making and -giving may also influence the shaping of the monument in each of its facets: spatially, materially, technologically, socially and diachronically. This volume varies widely in regional and chronological focus and forms a useful manual to studying both the acts of building and the constructions themselves across cultural contexts. A range of theoretical and practical methods are discussed, and papers illustrate that these are applicable to both small or large architectural expressions, making it useful for scholars investigating urban, architectural, landscape and human resources in archaeological and historical contexts. The ultimate goal of this book is to place architectural studies, in which people's interactions with each other and material resources are key, at the crossing of both landscape studies and material culture studies, where it belongs. The monuments of South Carolina bear on their weathered faces and cracked tablets a history of honor and of memory embodied in stone. Whether revealing the lost graves of Southern sons, unveiling the history of the only national cemetery to inter Confederate soldiers alongside the Union fallen during wartime or recording the simple obelisks that reach for heaven throughout the Palmetto State, this volume is a story of remembrance and of mourning. Kristina Dunn Johnson, curator of history with the South Carolina Confederate Relic Room and Military Museum, shares with us the powerful stories of memory and acceptance that are the legacy of the Confederacy, as varied as those who lie beneath the Southern soil. Monuments honoring leaders and victorious armies have been raised throughout history. Following the American Civil War, however, this tradition expanded, and by the early twentieth century, the Confederate dead and surviving veterans, although defeated in battle, ranked among the world's most commemorated troops. This memorialization, described in *North Carolina Civil War Monuments*, evolved through a challenging and contentious process accomplished over decades. Prompted by the need to rebury wartime dead, memorialization, led by women, first expressed regional grief and mourning then expanded into a vital aspect of Southern memory. In North Carolina, 109 Civil War monuments—101 honoring Confederate troops and eight commemorating Union forces—were raised prior to the Civil War centennial. Photographs showcase each memorial while committee records, legal documents, and contemporaneous accounts are used to detail the difficult process through which these monuments were erected. Their design, location, and funding reflect not only the period's sculptural and cultural milieu but also reveal one state's evolving grief and the forging of public memory. Examining how monuments preserve memory, these essays demonstrate how phenomena as diverse as ancient drum towers in China and ritual whale killings in the Pacific Northwest serve to represent and negotiate time. A vivid portrait of the assault on America's parks and forests this volume is a landscape photography project that captures the spirit and intrinsic value of America's threatened system of national monuments. In April 2017 an executive order called for the review of the 27 national monuments created since January 1996. In December 2017 the final report called on the president to shrink four national monuments and change the management of six others. Stop, look, and discover—the streets and parks of Manhattan are filled with beautiful historic monuments that will entertain, stimulate, and inspire you. Among the 54 monuments in this volume are major figures in American history: Washington, Lincoln, Lafayette, Horace Greeley, and Gertrude Stein; more obscure figures: Daniel Butterfield, J. Marion Sims, and King Jagiello; as well as the icons of New York: Atlas, Prometheus, and the Firemen's Memorial. The monuments represent the work of some of America's best sculptors: Augustus Saint Gaudens' Farragut and Sherman, Daniel Chester French's Four Continents, and Anna Hyatt Huntington's José Martí and Joan of Arc. Each monument, illustrated with black-and-white photographs, is located on a map of Manhattan and includes easy-to-follow directions. All the sculptures are considered both as historical mementos and as art. We learn of furious General Sherman court-martialing a civilian journalist, and also of exasperated Saint Gaudens' proposing a hook-and-spring device for improving his assistants' artistic acuity as they help model Sherman. We discover how Lincoln dealt with a vociferous Confederate politician from Ohio, and why the Lincoln in Union Square doesn't rank as a top-notch Lincoln portrait. Sidebars reveal other aspects of the figure or event commemorated, using personal quotes, poems, excerpts from nineteenth-century periodicals (*New York Times*, *Harper's Weekly*), and writers ranging from Aeschylus, Washington Irving, and Frederic-Auguste Bartholdi to Mark Twain and Henryk Sienkiewicz. As a historical account, *Outdoor Monuments of Manhattan: A Historical Guide* is a fascinating look at figures and events that changed New York, the United States and the world. As an aesthetic handbook it provides a compact method for studying sculpture, inspired by Ayn Rand's writings on art. For residents and tourists, and historians and students, who want to spend more time viewing and appreciating sculpture and New York history, this is the start of a unique voyage of discovery. *Monuments as Cultural and Critical Objects* explores monuments as political, psychological, social, and mystical objects. Incorporating autoethnography, psychoanalysis, deconstruction, postcolonialism, and queer ecology, Houlton argues for a radical, interdisciplinary approach to our monument-culture. Tracing historical developments in monuments alongside contemporary movements such as *Rhodes Must Fall* and *Black Lives Matter*, Houlton provides an in-depth critique of monument sites, as well as new critical and conceptual methodologies for thinking across the field. Alongside analysis of monuments to the Holocaust, colonial figures, and LGBTQIA+ subjects, this book provides new critical engagements with the work of D.W. Winnicott, Marion Milner, Jacques Derrida, Edward Said, Eve Sedgwick, and others. Houlton traces the potential for monuments to exert great influence over our sense of self, nation, community, sexuality, and place in the world. Exploring the psychic and physical spaces these objects occupy—their aesthetics, affects, politics, and powers—this book considers how monuments can challenge our identities, beliefs, and our very notions of remembrance. The interdisciplinary nature of *Monuments as Cultural and Critical Objects* means that it is ideally placed to intervene across several critical fields, particularly museum and heritage studies. It will also prove invaluable to those engaged in the study of monuments, psychoanalytic object relations, decolonization, queer ecology, radical death studies, and affect theory. Various issues regarding monuments have generated both controversy and lawsuits. Issues include the size of the areas and types of resources protected, the inclusion of non-federal lands within monument boundaries, restrictions on land uses that may result, the manner in which the monuments were created, the selection of the managing agency, and other legal issues. Courts have upheld both particular monuments and the President's authority to create them. This book addresses the authority of the President to create national monuments on federal lands under the Antiquities Act of 1906. It discusses the benefits of the Act and those aspects of the Act that have been controversial, including the size and types of resources protected; the level of and types of threat to designated areas; effects of proclamations on land uses; consistency of the Act with the withdrawal, public participation, and environmental review aspects of other laws; monument management by agencies other than the National Park Service (NPS); and the constitutionality of the Act. Contents: Preface; National Monuments and the Antiquities Act; Recent Designations and Issues; Authority of a President to Modify or Eliminate With a recorded history that goes back 5,000 years, India's architectural heritage includes an impressive array of monuments, ranging from centuries-old temples, tombs and forts to exquisite palaces and public halls. Explore eleven of these architectural gems through over 600 extraordinary photographs and detailed information on their history, cultural significance and key

architectural features. You'll discover a wide range of monuments, spanning both the centuries and country - from the ancient caves of Ajanta to the Mughal Taj Mahal in Agra. Includes bird's-eye-view illustrations of their layouts with key sights numbered and visitor paths marked. Plus find maps pinpointing geographical positions within India and practical tips on how to best explore each monument. Monuments around the world have become the focus of intense and sustained discussions, activism, vandalism, and removal. Since the convulsive events of 2015 and 2017, during which white supremacists committed violence in the shadow of Confederate symbols, and the 2020 nationwide protests against racism and police brutality, protesters and politicians in the United States have removed Confederate monuments, as well as monuments to historical figures like Christopher Columbus and Dr. J. Marion Sims, questioning their legitimacy as present-day heroes that their place in the public sphere reinforces. The essays included in this anthology offer guidelines and case studies tailored for students and teachers to demonstrate how monuments can be used to deepen civic and historical engagement and social dialogue. Essays analyze specific controversies throughout North America with various outcomes as well as examples of monuments that convey outdated or unwelcome value systems without prompting debate. Stonehenge, Machu Picchu, Confederate statues, Egyptian pyramids, and medieval cathedrals: these are some of the places that are the subject of *Making Sense of Monuments*, an analysis of how the built environment molds human experiences and perceptions via bodily comparison. Drawing from recent research in cognitive neuroscience, psychology, and semiotics, Michael J. Kolb explores the mechanics of the mind, the material world, and the spatialization process of monumental architecture. Three distinct spatial-cognitive metaphors—time, movement, and scale—comprise strands of knowledge that when interwoven create embodied contours of meaning of how human interact with monumental spaces. Comprehensive, lucidly written, and thoroughly illustrated, *Making Sense of Monuments* is a vibrant, extraordinary journey of the monuments we have constructed and inhabited. Kirk Savage explores the National Mall in Washington D.C., site of some of the most important & poignant memorials in the U.S. He shows how the idea of monument has changed over the decades, & how the 19th century concept of the monument has given way to the late 20th century idea of 'space', the monument as an experience. Monuments and memorials (numbering 1,320) dominate Gettysburg battlefield landscape, providing mute testimony to the three terrible days in July 1863 that left 51,000 American soldiers dead, wounded, or captured. For more than a century, American communities erected monuments to western pioneers. Although many of these statues receive little attention today, the images they depict—sturdy white men, saintly mothers, and wholesome pioneer families—enshrine prevailing notions of American exceptionalism, race relations, and gender identity. *Pioneer Mother Monuments* is the first book to delve into the long and complex history of remembering, forgetting, and rediscovering pioneer monuments. In this book, historian Cynthia Culver Prescott combines visual analysis with a close reading of primary-source documents. Examining some two hundred monuments erected in the United States from the late nineteenth century to the present, Prescott begins her survey by focusing on the earliest pioneer statues, which celebrated the strong white men who settled—and conquered—the West. By the 1930s, she explains, when gender roles began shifting, new monuments came forth to honor the Pioneer Mother. The angelic woman in a sunbonnet, armed with a rifle or a Bible as she carried civilization forward—an iconic figure—resonated particularly with Mormon audiences. While interest in these traditional monuments began to wane in the postwar period, according to Prescott, a new wave of pioneer monuments emerged in smaller communities during the late twentieth century. Inspired by rural nostalgia, these statues helped promote heritage tourism. In recent years, Americans have engaged in heated debates about Confederate Civil War monuments and their implicit racism. Should these statues be removed or reinterpreted? Far less attention, however, has been paid to pioneer monuments, which, Prescott argues, also enshrine white cultural superiority—as well as gender stereotypes. Only a few western communities have reexamined these values and erected statues with more inclusive imagery. Blending western history, visual culture, and memory studies, Prescott's pathbreaking analysis is enhanced by a rich selection of color and black-and-white photographs depicting the statues along with detailed maps that chronologically chart the emergence of pioneer monuments. This book comprises eight essays that consider the politics and polemics of monuments in Africa in the wake of the #RhodesMustFall movement in 2015. The removal of the Rhodes statue from UCT main campus is the pivot on which the discussion of monuments as heritage in South Africa turns. It raised a number of questions about the implementation of heritage policy and the unequal deployment of memorials in the South African and other postcolonial landscapes. The essays in this volume are written by authors coming from different backgrounds and different disciplines. They address different aspects of this event and its aftermath, offering some intensive critique of existing monuments, analysing the successes of new initiatives, meditating on the visual resonances of all monuments and attempting to map ways of moving forward. Confederate monuments and markers in cemeteries across Georgia are inscribed with a variety of dedications. Many offer a simple sentiment, such as "Our Confederate Dead, 1861-1865" or "Lest We Forget"; some present a more political statement—"They Fought Not For Conquest, But For Liberty And Their Own Homes"; some have long soliloquies of prose or poetry; and others feature lists of names of individuals or units that served. *Georgia's Confederate Monuments and Cemeteries* features vintage images of soldiers, sailors, and the many different types of monuments erected throughout the state to honor them. These monuments of stone, marble, granite, and bronze recognize the sacrifice of those who served Georgia in the War Between the States. Various memorial associations and organizations, survivors, and descendants of these men and women built lasting tributes to them, and each has a story to tell. Twentieth Anniversary Edition with a new preface and afterword From the removal of Confederate monuments in New Orleans in the spring of 2017 to the violent aftermath of the white nationalist march on the Robert E. Lee monument in Charlottesville later that summer, debates and conflicts over the memorialization of Confederate "heroes" have stormed to the forefront of popular American political and cultural discourse. In *Written in Stone* Sanford Levinson considers the tangled responses to controversial monuments and commemorations while examining how those with political power configure public spaces in ways that shape public memory and politics. Paying particular attention to the American South, though drawing examples as well from elsewhere in the United States and throughout the world, Levinson shows how the social and legal arguments regarding the display, construction, modification, and destruction of public monuments mark the seemingly endless confrontation over the symbolism attached to public space. This twentieth anniversary edition of *Written in Stone* includes a new preface and an extensive afterword that takes account of recent events in cities, schools and universities, and public spaces throughout the United States and elsewhere. Twenty years on, Levinson's work is more timely and relevant than ever. From the award-winning, bestselling author of *Skyscrapers, Churches, and Bridges* comes a stunning visual history that serves as a tribute to classic American landmarks. A leading expert on the past, present, and future of public monuments in America. An urgent and fractious national debate over public monuments has erupted in America. Some people risk imprisonment to tear down long-ignored hunks of marble; others form armed patrols to defend them. Why do we care so much about statues? Which ones should stay up and which should come down? Who should make these decisions, and how? Erin L. Thompson, the country's leading expert in the tangled aesthetic, legal, political, and social issues involved in such battles, brings much-needed clarity in *Smashing Statues*. She lays bare the turbulent history of American monuments and its abundant ironies, from the enslaved man who helped make the statue of Freedom that tops the United States Capitol, to the fervent Klansman fired from sculpting the world's largest Confederate monument—who went on to carve Mount Rushmore. And she explores the surprising motivations behind contemporary flashpoints, including the toppling of a statue of Columbus at the Minnesota State Capitol, the question of who should be represented on the Women's Rights Pioneers Monument in Central Park, and the decision by a museum of African American culture to display a Confederate monument removed from a public park. Written with great verve and informed by a keen sense of American history, *Smashing Statues* gives readers the context they need to consider the fundamental questions for rebuilding not only our public landscape but our nation as a whole: Whose voices must be heard, and whose pain must remain private? This book brings together a collection of essays from scholars and cultural critics working on the meanings of monuments and memorials in the second decade of the twenty-first century, a time of great social and political change.
