each chapter of *The Entrepreneur's Guide to Building a Better Business Plan* a single case study illustrates the topic under discussion, from the company charter through market analysis and financial. *Legal Research Demystified* offers a real-world approach to legal research for first-year law students. The book guides students through eight steps to research common law issues and ten steps to research statutory issues. It breaks down the research steps and process into "bite-size" pieces for novice researchers, minimizing the frustration often associated with learning new skills. This text also gives students context, explaining why and when a source or finding tool should be used when researching the law. The process of legal research, of course, is not linear. This book constantly reminds students of the recursive nature of legal research, and it identifies specific situations when they may deviate from the research steps. Through the book's step-by-step approach, students will connect seemingly unrelated tools (e.g., citators and the Key Number System) and understand how to leverage them to answer legal questions. Every chapter includes charts, diagrams, and screen captures to illustrate the research steps and finding methods. Each chapter concludes with a "summary of key points" section that reinforces important concepts from the chapter. This book provides students and professors with multiple assessment tools. Each chapter ends with true-false and multiple-choice questions that test students' understanding of chapter content. These questions are replicated on the book's companion website, Core Knowledge. Students may answer these end-of-chapter questions, as well as more advanced questions, on Core Knowledge and receive immediate feedback, including an explanation of why the answer is correct or incorrect. Professors can generate reports to track students' performance. Based on students' performance, professors will know whether to review a topic in more detail or to move to the next topic. (New books contain an access code to Core Knowledge; students purchasing used books can buy an access code separately.) Core Knowledge offers yet another assessment tool: interactive research exercises. These online exercises walk students through the research steps on Westlaw and Lexis Advance, giving professors the option to "flip" the classroom. Through many screen captures and tips, students can navigate both research platforms outside of class, allowing students and professors to dig deeper into the material during class. Each research exercise simulates a real-world research experience and contains self-grading questions. For example, in one exercise, students research on Westlaw to determine whether the client could recover damages against a neighbor for the emotional distress for the death of the client's dog. To answer the client's question, students must complete the research steps, including finding and reviewing secondary sources on Westlaw, using the Key Number System and KeyCite, and performing keyword searches. Professor support materials include a Teacher's Manual, sample syllabi, and sample research exams.

TV adventurer Simon Reeve has journeyed across epic landscapes, dodged bullets on frontlines, walked through minefields, and been detained for spying by the KGB. His travels have taken him across jungles, deserts, mountains and oceans, and to some of the most beautiful, dangerous and remote regions of the world. In this revelatory account of his life, Simon gives the full story behind some of his favourite expeditions - including navigating a minefield on the Armenian border, playing polo with the corpse of a headless goat, and ceremonially naming a Kazakh baby. He traces his own inspiring personal journey back to leaving school without qualifications, teetering on a bridge, and then overcoming his challenges by climbing to a "Lost Valley" and changing his life...step by step. This easy-to-understand guide makes SEM accessible to all users. This second edition contains new material on sample-size estimation for path analysis and structural equation modeling. This book is about Case-Based Collaborative Learning (CBCL) for medical educators.

CBCL combines elements from team-, case- and problem-based learning using a flipped classroom model. This book presents a detailed “how to” guide on how to create CBCL classroom materials, how to facilitate vivid discussions, and how to support students and faculty in a CBCL curriculum. The first chapter explores the CBCL method in context of established educational principles. The second chapter provides a step-wise guide to creating CBCL teaching materials from scratch or adapting existing resources. Chapter three discusses how to support both - faculty and students - in making the most out of in-class case discussions. The last chapter explores modifications to the CBCL method that have evolved over time in adapting to teaching remotely, as well as promoting self-directed learning skills in students. While originally developed in context of undergraduate medical education, the CBCL method is of interest to anyone in higher education that values flipped classroom methods and discussion-based teaching.
