**Dealing with worship, the home, scriptures and key beliefs, this is one of three books which constitute an RE course for lower-secondary pupils. This revised edition matches the Locally Agreed Syllabuses and SCAA Models, and is designed to introduce the nature of religious belief and to encourage a greater knowledge and understanding of the six major religions. The three books are organized by religion, and non-specialist teachers are helped by the combination of detailed coverage and self-contained spreads. The aim of this book is to make a major contribution to the field of religious studies while at the same time paying tribute to the work of Wilfred Smith. Although the basis of the chapters is provided by Smith's themes of faith and tradition and Smith's approach to the study of religion, this book stands in its own right as a significant addition to both content and method in the global history of religions. First published in 1984, it includes contributions by Geoffrey Parrinder, Annemarie Schimmel, George Rupp, Ninian Smart and others. Introducing Religion, 4/e**

**explores the different ways of looking at religion in the twenty-first century. A broad overview to religious studies as a discipline introduces students to the various subjects of religion. Introducing Religion teaches readers how to think in academic religious studies and its main areas, including: sociology of religion, psychology of religion, history of religion, religion and art, ethics, and more. The fourth edition has been expanded with new chapters exploring topics of contemporary interest: myth, spiritual paths, religion and popular culture, religion in the computer age, religion and war. Contemporary topics engage today's students, relating the topics to the changing world around them. Widely used as a primer, a text and a provocation to critical thinking, 'Studying Religion' aims to develop students' skills. The book clearly explains the methods and theories employed in the study of religion. Essays are offered on a range of topics: from the history and functions of religion to public discourse on religion and the classification of religions. The works of key scholars - from Karl Marx, Ludwig Wittgenstein and Rudolf Otto to Mircea Eliade, James G. Frazer, and Sigmund Freud - are analysed and explored. 'Studying Religion' represents a shift away from the traditional focus of describing the exotic or curious religious 'Other' to an examination of how religious**

behaviours and institutions are studied. The book will be invaluable to students of religious studies. Informative and provocative, this book introduces readers to debates in the contemporary study of religion and suggests future research possibilities. This book is a contribution to the development of a didactics of the Study of Religions (“Religionswissenschaft”). Based on a discussion of recent theory and methodology in the academic study of religions and in education, current models of integrative religious education in Europe (i.e. education about different religions in religiously mixed classrooms) are analysed and evaluated, with a special focus on England and Sweden. The book concludes with the suggestion of a European framework for integrative religious education from a study-of-religions perspective. The authors of this volume examine theory and practice regarding past and present roles of Jewish, Christian and Islamic religious education in nurturing tolerance, interpreted as mutual respect for and recognition of other groups, in Eastern (Albania, Bulgaria, Kosovo, Macedonia, Moldova, Montenegro and Romania) and Western (Finland, Germany, Italy, Latvia and Spain) Europe, Israel, Nigeria and Uzbekistan. They also explore potential roles of religion and exclusivism in fostering (Islamic state, NGOs, etc.), but also

Is religion inherently violent? Would violence disappear if religion did? Is true religion a force for peace? Is religion a mask for power and self-interest? What aspects of religion make violence more—or less—likely? Religion and Violence: A Religious Studies Approach explores the potential of classic social theories to shed light on the relationships between religion and violence. This accessible and engaging book starts from the premise that both religion and violence are ordinary elements of social life and that rather than causing violence religion plays a crucial role in the management of violence. Ideal for any student approaching the topic of religion and violence for the first time, this core textbook includes chapter overviews and summaries, guides for applying theory to real-world events, discussion questions,**

and case studies. Further teaching and learning resources are available on the accompanying companion website. **Religion and Education: The Forgotten Dimensions of Religious Education?** explores fundamental questions about the role of religion and education in contemporary religious education. Drawing from a range of educational and religious traditions and perspectives, it investigates the future of religious education for all. Drawing on recent developments in the comparative study of religion, this book explores the trends of the past sixty years from a global perspective. Each of the ten chapters covers the study of religion in a different region of the world, from Europe and the Americas to Asia and the Far East. Topics covered include: local background to the study of religions formation of religious studies in the region important thinkers and writings institutions interregional diversity and interregional connections emerging issues. This book is a major contribution to the field of religious studies and a valuable reference for scholars, researchers and graduate students. Is faith a necessary virtue in the contemporary world? May it be, or must it be, detached from religious commitment? What do genealogies of the secular tell us about faith? Does religion need secular faith? **Secular Faith** brings together leading and emerging

**scholars to reflect on the apparent paradox of "secular faith." Ranging over anthropology, religious studies, political science, history, and literature, from Muslims in China to Pentecostals in South Africa to a prison chapel in Texas, this collection of essays is as engaging and accessible as it is penetrating and rigorous. Communism was once labeled "the god that failed." Like Christianity, Communism involves faith in a superhuman endeavor, conversion, myth, discipline, and salvation--and, from the perspective of secular liberalism, both are unjustified and false. In recent years, scholars have begun to investigate whether secularism is itself based on faith in a god that failed, or is failing. Nevertheless, many still embrace such a faith, finding in the spirit of democracy an ethos of eternal renewal. Secular Faith enters and broadens this conversation, interrogating secular faith in a global context, tapping new theoretical resources, and grappling provocatively with the tragedies and opportunities of today's profane pantheon of beliefs. Explores the relationship between religious studies and theology and the place of each in the modern, secular university. The series Religion and Society (RS) contributes to the exploration of religions as social systems— both in Western and non-Western societies; in particular, it**

**examines religions in their differentiation from, and intersection with, other cultural systems, such as art, economy, law and politics. Due attention is given to paradigmatic case or comparative studies that exhibit a clear theoretical orientation with the empirical and historical data of religion and such aspects of religion as ritual, the religious imagination, constructions of tradition, iconography, or media. In addition, the formation of religious communities, their construction of identity, and their relation to society and the wider public are key issues of this series. Focusing solely on well-known religions is an approach that impoverishes religious studies. Rather, this book introduces the diverse religious experience of Africans, Native Americans, and the indigenous peoples of Australia, providing a comprehensive introduction to the study of religion and broadening the horizons of religious studies students. The relationship of a scholar's identity to the scholarship he or she produces is a central concern in the academy and this volume is the first attempt to approach the special problems it presents for religious studies. A Critical Introduction to the Study of Religion introduces the key concepts and theories from religious studies that are necessary for a full understanding of the complex relations between religion and society. The aim is to provide**

readers with an arsenal of critical concepts for studying religious ideologies, practices, and communities. This thoroughly revised second edition has been restructured to clearly emphasize key topics including: Essentialism Functionalism Authority Domination. All ideas and theories are clearly illustrated, with new and engaging examples and case studies throughout, making this the ideal textbook for students approaching the subject area for the first time. Publisher description Globalization has taken the world by storm and has facilitated the unprecedented migrations of the peoples of this world. Whether we like it or not, we will meet foreigners in our communities, schools, universities, buses, and other public places. But, when people migrate they take their religions with them. If people of different religious traditions are to live side by side amicably, interfaith dialogue becomes imperative. But, for people to be able to speak about their own religions with enlightenment and listen to other people's religious beliefs with respect, they must have some basic knowledge of how faiths and believers operate because for some people, religion is inseparably intertwined with their economics, politics, and everyday lives. This book clearly and concisely introduces religious studies to the reader. It makes a strong case for the quest and study of

**world religions and explores the challenges, controversies, and methodological issues in the study of religions. It also explores other pertinent religious issues such as beliefs, rituals, myths, sacredness, morality, the problem of evil, and interreligious dialogue. Although written from a classroom perspective, this book can be useful to any reader who would like to acquire knowledge of religious issues. The World Religions Paradigm has been the subject of critique and controversy in Religious Studies for many years. After World Religions provides a rationale for overhauling the World Religions curriculum, as well as a roadmap for doing so. The volume offers concise and practical introductions to cutting-edge Religious Studies method and theory, introducing a wide range of pedagogical situations and innovative solutions. An international team of scholars addresses the challenges presented in their different departmental, institutional, and geographical contexts. Instructors developing syllabi will find supplementary reading lists and specific suggestions to help guide their teaching. Students at all levels will find the book an invaluable entry point into an area of ongoing scholarly debate. "This book asks: Can the study of religion be justified? It poses this question on the view that scholarship in**

religion, especially work in "theory and method," is preoccupied with matters of methodological procedure and thus inarticulate about the goals that can justify the study of religion and motivate scholarship in the field. For that reason, it insists, the field suffers from a crisis of rationale. The book identifies six prevailing methodologies in the field, each of which it critically examines as symptomatic of this crisis, on the way toward offering an alternative framework for thinking about purposes for studying religion. Shadowing these methodologies is a Weberian scientific ideal for studying religion, one that privileges value-neutrality. This ideal poses obstacles to making justificatory claims on behalf of studying religion and fortifies a repressive conscience about thinking normatively within the field's regime of truth. After making these points, the chapter describes the book's alternative framework, Critical Humanism, especially how it theorizes about the ends rather than the means of humanistic scholarship and offers a basis for thinking about the ethics of Religious Studies as held together by four values: Post-critical Reasoning, Social Criticism, Cross-cultural Fluency, and Environmental Responsibility. Ordered to such purposes, the book argues, the study of religion can imagine itself as a valuable and desirable enterprise

"This book articulates a learning process to help educators improve approaches to other religious traditions. Understanding Other Religious Worlds distinguishes between learning facts about other religions and understanding them and their followers in a wholistic manner. Berling argues that incorporating the religious "other" in one's own Christian identity is integral to living an authentic Christian life."--BOOK JACKET. Our contemporary world is fast becoming religiously diverse in a variety of ways. Thanks to globalization and migration, to mention only two current worldwide trends, people of diverse and sometimes mutually hostile faiths are now sharing neighborhoods and encountering one another's religious traditions on a daily basis. For scholars in religious studies and theology the issue to be examined is whether religious diversity is merely the result of historical development and social interaction, or whether it is inherent in the object of belief--part of the very structure of faith and our attempts to understand and express it. The essays in this volume range from explorations of the impact

**of religious diversity on religious studies to examples of interfaith encounter and dialogue, and current debates on Christian theology of religion. These essays examine not only the theoretical issues posed by religious pluralism to the study of religion and Christian theology but also concrete cases in which religious pluralism has been a bone of contention. Together, they open up new vistas for further conversation on the nature and development of religious pluralism. This book looks at how religious studies is framed and taught in India. It addresses the contradiction between the country's vibrant religious life and the dearth of comparative and social scientific religious studies programs across Indian universities. The volume:**

- Studies the efforts by Rabindranath Tagore in Santiniketan and Mohan Malaviya in Varanasi, to introduce and institutionalize religious studies in India;**
- Discusses the notions of religion and spirituality and situates the failure of the 'secularization thesis' in the context of modern India;**
- Provides concrete suggestions on how to develop religious studies in relation to global citizenship and Indian cultural heritage with the hope of initiating a larger discussion. A unique contribution to the study of religion in society and education, the book will be indispensable to students and researchers of**

**theology, history, philosophy, sociology, secularization, globalization, religious studies, education studies, and South Asian studies. American evangelicalism is big business. It is not, Daniel Vaca argues, just a type of conservative Protestantism that market forces have commodified. Rather evangelicalism is an expressly commercial practice, in which the faithful participate, learn, and develop religious identities by engaging corporations and commercial products. The first generation of the proper academic study of religion might be said to span the half century from 1963 to 2013. Supreme Court Justice Clark's 1963 opinion clarifying that any liberal "education is not complete without a study of comparative religion or the history of religion and its relationship to the advancement of civilization" allowed the legal teaching of religion in secular universities. The end of the first generation might be marked by the 2013 retirement of Professor Jonathan Z. Smith (1938-2017) from the University of Chicago where he had taught since 1968. Arguably no scholar has made a greater contribution than did Smith to establishing a proper academic study of religion. In *The Proper Study of Religion*, Sam Gill charts an innovative course of development for the academic study of religion by creatively engaging the legacy**

of Jonathan Z. Smith, Gill's teacher and mentor for fifty years. Their careers coincided with the explosive expansion of the study of religion in secular universities in the US that began in the mid-1960s. Using an engaging narrative style, Gill builds on Smith's work exploring an extensive range of absorbing and foundational topics including: comparison as essential to academic technique and to human knowledge itself; the important role of experience, richly understood, both to academic studies of religion and to religions as lived; play, philosophically understood, as a core dynamic of Smith's entire program; the relationship of academic document-based studies to the sensory-rich real world of religions; and self-moving as providing a biological and philosophical foundation on which to develop and expand upon a proper academic study of religion. The foregrounding of human self-movement, new to the study of religion, is informed by Gill's experience as a dancer and student of dancing in cultures around the world. This book honors the work of an unforgettable giant of a man while also offering critical assessments and innovative ideas in the effort to advance the remarkable legacy of Jonathan Z. Smith. This 2005 book asks: how will theology and the religions be studied in higher education in the coming century?

This is the first systematic scholarly study that analyses the complex relationship between history and religion, taking into account religious groups both as producers of historical narratives as well as distinct topics of historiography. Coming from different disciplines, the authors of this volume ask under which conditions and with what consequences religions are historicised. How do religious groups employ historical narratives in the construction of their identities? What are the biases and elisions of current analytical and descriptive frames in the History of Religion? The volume aims at initiating a comparative historiography of religion and combines disciplinary competences of Religious Studies and the History of Religion, Confessional Theologies, History, History of Science, and Literary**

**Studies. By applying literary comparison and historical contextualization to those texts that have been used as central documents for histories of individual religions, their historiographic themes, tools and strategies are analysed. The comparative approach addresses circum-Mediterranean and European as well as Asian religious traditions from the first millennium BCE to the present and deals with topics such as the origins of religious historiography, the practices of writing and the transformation of narratives. In recent years there has been an intensifying debate within the religious studies community about the validity of religion as an analytical category. In this book Fitzgerald sides with those who argue that the concept of religion itself should be abandoned. On the basis of his own research in India and Japan, and through a detailed analysis of the use of religion in a wide range of scholarly texts, the author maintains that the comparative study of religion is really a form of liberal ecumenical theology. By pretending to be a science, religion significantly distorts socio-cultural analysis. He suggest, however, that religious studies can be re-represented in a way which opens up new and productive theoretical connections with anthropology and cultural and literary studies. In *The Politics of Religious Studies* , Donald Wiebe**

takes on a debate that has been raging in universities across North America and Europe for some years now. The issue is whether to approach religion as a science, free from the dissemination of beliefs and evangelizing, or to study it as a form of faith and therefore draw lines between believers and nonbelievers. Wiebe persuasively argues the former, claiming that if taught in a university religion must be treated as a science, with all the objectivity and research that are brought to other subjects. He further maintains that the study of theology should take place in seminaries, which are the proper places for the pursuit of religion as a creed. Exploring the true meaning and role of an academic, Wiebe shows how by propagating religion, instructors are abandoning their academic task to "explain everything and enjoin nothing." Certain to incite controversy, *The Politics of Religious Studies* is an intelligent manifesto guaranteed to help readers look at academia, the search for knowledge, and the idea of religion in an entirely new light. *Religion and Higher Education in Europe and North America* illuminates the experiences of staff and students in higher education as they negotiate the university environment. Religious extremism has been rising across Europe, whilst recent attacks have thrown public debate around the place of

religion on campus, the role of universities in recognising and managing religious fundamentalism and freedom of speech on campus into sharper focus. Despite these debates, research exploring religion on campus has been largely absent from discourse on higher education outside of America, with policy and practices designed to deal with religion on campus largely founded on supposition rather than evidence. This book speaks into that void, including results from recent studies in the field which form an empirically grounded base from a broad variety of perspectives on religion at universities. Aiming to offer a deeper perspective, more dialogue, and engagement on the experiences of students, *Religion and Higher Education in Europe and North America* presents us not only with an opportunity to counter growing trends of intolerance, but for people to connect with the humanity of others. Focusing on what research reveals about staff and students' experiences, it incorporates research from different academic disciplines including sociology, education, social policy, theology and religious studies, and across different faith and belief groups. This thought-provoking and challenging volume features chapters written by researchers involved in informing policy and practice relating to religion and belief in higher

**education in the UK, US, Canada, France and the Netherlands . Spanning the academic-practitioner divide, students and academics interested in the sociology of religion and of higher education, as well as those responsible for the practical management of campus life, will find this text of particular importance. A century that began with modernism sweeping across Europe is ending with a remarkable resurgence of religious beliefs and practices throughout the world. Wherever one looks today, from headlines about political turmoil in the Middle East to pop music and videos, one cannot escape the pivotal role of religious beliefs and practices in shaping selves, societies, and cultures. Following in the very successful tradition of *Critical Terms for Literary Studies* and *Critical Terms for Art History*, this book attempts to provide a revitalized, self-aware vocabulary with which this bewildering religious diversity can be accurately described and responsibly discussed. Leading scholars working in a variety of traditions demonstrate through their incisive discussions that even our most basic terms for understanding religion are not neutral but carry specific historical and conceptual freight. These essays adopt the approach that has won this book's predecessors such widespread acclaim: each provides a concise history of a critical term,**

**explores the issues raised by the term, and puts the term to use in an analysis of a religious work, practice, or event. Moving across Judaism, Christianity, Hinduism, Buddhism, Islam, and Native American and Mayan religions, contributors explore terms ranging from experience, territory, and image, to God, sacrifice, and transgression. The result is an essential reference that will reshape the field of religious studies and transform the way in which religion is understood by scholars from all disciplines, including anthropology, sociology, psychology, cultural studies, gender studies, and literary studies. What is religion? How does it work? Many natural abilities of the human mind are involved, and crucial among them is the ability to use language. This volume brings together research from linguistics, cognitive science and neuroscience, as well as from religious studies, to understand the phenomena of religion as a distinctly human enterprise. The book is divided into three parts, each part preceded by a full introductory chapter by the editors that discusses modern scientific approaches to religion and the application of modern linguistics, particularly cognitive linguistics and pragmatics. Part I surveys the development of modern studies of religious language and the diverse disciplinary strands that**

have emerged. Beginning with descriptive approaches to religious language and the problem of describing religious concepts across languages, chapters introduce the turn to cognition in linguistics and also in theology, and explore the brain's contrasting capacities, in particular its capacity for language and metaphor. Part II continues the discussion of metaphor - the natural ability by which humans draw on basic knowledge of the world in order to explore abstractions and intangibles. Specialists in particular religions apply conceptual metaphor theory in various ways, covering several major religious traditions- Buddhism, Christianity, Hinduism, Islam and Judaism. Part III seeks to open up new horizons for cognitive-linguistic research on religion, looking beyond written texts to the ways in which language is integrated with other modalities, including ritual, religious art, and religious electronic media. Chapters in Part III introduce readers to a range of technical instruments that have been developed within cognitive linguistics and discourse analysis in recent years. What unfolds ultimately is the idea that the embodied cognition of humans is the basis not only of their languages, but also of their religions. This book reexamines the meaning and significance of the first World's Parliament of

**Religions and its impact on the development of the academic study of religion. Held in Chicago in 1893, the Parliament attracted the participation of religious leaders from different faiths and a smaller number of academics who studied religion from what they called "scientific" perspectives. Following an introduction by the editor, the essays are organized into three sections. Part I reissues six papers on comparative religion from the Parliament's original proceedings. Part II contains two articles, both written within a year of the Parliament, that express an early appraisal of the significance of the Parliament for world religious history and the comparative study of religion. A third and final Part contains eight contemporary essays reassessing the Parliament itself and its impact on interfaith dialogue and comparative religion.**
