The Valley of the Queens Project is a collaboration of the Supreme Council of Antiquities and the Getty Conservation Institute from 2006-2011. The project involved comprehensive research, planning and assessment culminating in the development of detailed plans for conservation and management of the site. Volume 2 of the report is the condition summary of the 111 tombs from the 18th, 19th, and 20th Dynasties in the Valley of the Queens. This includes a summary of tomb architectural development, the geological and hydrological context, wall painting technique and condition assessment of the paintings and structural stability of the tombs. This volume brings together authors working on a wide range of topics to provide an up to date account of the underlying mechanisms and functions of neurogenesis and synaptogenesis in the adult brain. With an increasing understanding of the role of neurogenesis and synaptogenesis it is possible to envisage improvements or novel treatments for a number of diseases and the possibility of harnessing these phenomena to reduce the impact of ageing and to provide mechanisms to repair the brain.

Research on radiation-tolerant electronics has increased rapidly over the past few years, resulting in many interesting approaches to modeling radiation effects and designing radiation-hardened integrated circuits and embedded systems. This research is strongly driven by the growing need for radiation-hardened electronics for space applications, high-energy physics experiments such as those on the Large Hadron Collider at CERN, and many terrestrial nuclear applications including nuclear energy and nuclear safety. With the progressive scaling of integrated circuit technologies and the growing complexity of electronic systems, their susceptibility to ionizing radiation has raised many exciting challenges, which are expected to drive research in the coming decade. In this book we highlight recent breakthroughs in the study of radiation effects in advanced semiconductor devices, as well as in high-performance analog, mixed signal, RF, and digital integrated circuits. We also focus on advances in embedded radiation hardening in both FPGA and microcontroller systems and apply radiation-hardened embedded systems for cryptography and image processing, targeting space applications. French Laundry Without texture, paintings look dull and lifeless, but creating texture takes knowledge and practice to perfect. It can be applied two ways; physical texture, which comes from layering paint or adding sand, gels or plaster; and implied texture, which utilizes the skillful application of color to fool the eye. In this illustrated guide, both methods are taught, with separate chapters addressing landscapes, seascapes, still life and portrait paintings. Two hundred color photographs show textures being applied through knives, brushes, plastic wrap, sponges, and other objects--even a toothbrush--accompanied by detailed reasoning behind the technical instructions for each action. This series of books offers accounts of the literary careers of widely read British and Irish authors. Volumes follow the outline of the writers' working lives tracing the professional, publishing and social contexts which shaped their writing. This book is about the Irish author James Joyce. Luca Zan, Stefano Zambon, Andrew M. Pettigrew This book has developed from an international research workshop organized by the Dipartimento di Economia e Direzione Aziendale, University of Venice, and the Centre for Corporate Strategy and Change, Warwick Business School, University of Warwick. The purpose of the workshop was to foster the growth of a European network of scholars and to help create a "European perspective" in studying strategic change. The ten chapters in this book were first presented in Venice in May 1991 and have been substantially revised since then. The ten commentaries on the chapters are in most cases substantial developments of the oral responses made at the workshop, as indeed is the final review chapter by Andrew Van de Ven. The theme of this book, the study of strategic change processes, remains as theoretically alive and empirically real in the 1990s as it did in the 1980s. For many organizations in the European and North American context, the 1980s was an era of radical change. In this respect there is a wide array of examples. Structural changes in old industries such as coal, shipbuilding, steel, and heavy engineering led to a great employment loss and the impoverishment of certain regional economies that had remained dependent on those industries. But it was not just the old industries that X INTRODUCTION experienced major change during the 1980s. Dirt, soil, call it what you want—it's everywhere we go. It is the root of our existence, supporting our feet, our farms, our cities. This fascinating yet disquieting book finds, however, that we are running out of dirt, and it's no laughing matter. An engaging natural and cultural history of soil that sweeps from ancient civilizations to modern times, *Dirt: The Erosion of Civilizations* explores the compelling idea that we are—and have long been—using up Earth's soil. Once bare of protective vegetation and exposed to wind and

rain, cultivated soils erode bit by bit, slowly enough to be ignored in a single lifetime but fast enough over centuries to limit the lifespan of civilizations. A rich mix of history, archaeology and geology, *Dirt* traces the role of soil use and abuse in the history of Mesopotamia, Ancient Greece, the Roman Empire, China, European colonialism, Central America, and the American push westward. We see how soil has shaped us and we have shaped soil—as society after society has risen, prospered, and plowed through a natural endowment of fertile dirt. David R. Montgomery sees in the recent rise of organic and no-till farming the hope for a new agricultural revolution that might help us avoid the fate of previous civilizations.
