"If McHugh is serious, she's
anything but grim; with all her
punning, bantering, and mock
scolding of herself . . . she

brightens the shadowy corners of her world with verbal pyrotechnics."—The New York Times Book Review "Her poems are open, resilient, invisibly twisted: part safety net, part trampoline."—Voice Literary Supplement This fast-paced, verbally dexterous book—honored as a "Book of the Year" by Publishers Weekly—"boils up and boils over" as it utilizes medical terminology and iconography to work through loss and detachment. Heather McHugh's startling rhymes and rhythms, coupled with her sarcastic self-reflection and infectious laughter, serve as both palliative and prophylactic in the face of human sufferings and ignorance. Being "upgraded to serious" from critical condition is a nod to the healing powers of poetry. "Not to Be Dwelled On" Self-interest cropped up even there, the day I hoisted three instead of the ceremonially called-for two spadefuls of loam onto the coffin of my friend. Why shovel more than anybody else? What did I think I'd prove? More love

(mud in her eye)? More will to work? (her father what, a shirker?) Christ, what wouldn't anybody give to get that gesture back? She cannot die again; and I do nothing but re-live. Heather McHugh is the author of a dozen books of poetry and translation. She teaches at the University of Washington and Warren Wilson College and lives in Seattle, Washington. This book examines industrial upgrading in China's Pearl River Delta (PRD), with a specific focus on how strategic coupling impacts industrial upgrading from the perspective of relational economic geography. It shows that firms in the PRD have been struggling after serving as low-tier suppliers and subcontractors for transnational corporations for two decades, since the 1980s opening reform in China. Indigenous innovation and direct state support have fostered the success of a few firms, but not the majority. In response, many local firms are now taking advantage of the opportunities to be found in

global production networks, which link the PRD with the global economy. This book elaborates on how these opportunities are embedded and identified in global production networks with regard to different types of strategic coupling. It not only renews the theory of strategic coupling in economic geography, but also demonstrates potential strategies that latecomer firms can pursue, and which can have major implications for many developing countries and regions. You've Been Upgraded! God's grace says you're worthy to live life without turmoil, fear and regret. Brokenness is a common thread that ties many of us together. How we got there may be different- childhood trauma, failures, distrust, hurtful relationships. You may feel as though you're lost, wandering through life trying to keep things together; smiling on the outside while weathering a tempestuous storm on the inside. You may wonder if you're the only one

fighting this giant of abysmal sadness, insecurity and inexplicable hopelessness; but you are not alone! You've wandered and wondered long enough. Your answer is here. God's grace is available for you today. You can change your outlook. You can change your mindset. And you can change your life! Because of God's power and grace, you have been upgraded to live the abundant life He calls for you to live. This book, "Upgraded by Grace" shows you how. Better . . . Stronger . . . Faster . . . The doctors rebuilt Hugo Award-winning editor Neil Clarke and made him a cyborg. Now he has assembled this anthology of twenty-six original cyborg stories by Greg Egan, Madeline Ashby, Elizabeth Bear, Peter Watts, Ken Liu, Robert Reed, Yoon Ha Lee, and more! Upgrading Waste for Feeds and Food considers how wasted or underutilized nutrients could be recovered and upgraded in order to make more food available, either directly or through animal intermediaries. This book

assesses what progress had already been made in seeking a solution to the problem of large quantities of food being wasted. The topics discussed include the world outlook for food, sources of food waste, and recovery and utilization of protein from slaughterhouse effluents by chemical precipitation. The silage production, use of microbiological agents in upgrading waste for feed and food, and underutilized proteins for beverages are also elaborated. This text likewise covers the crude pectate gelling agents in heat processed foods and utilization of food wastes as raw material in the pet-food industry. This publication is a good source for agriculturists, nutritionists, and food technologists concerned with recovering wasted food. "Five Minutes a Day to an Upgraded Therapy Practice is a compilation of short, useful suggestions based on classic theory, current research, and wisdom gathered over fifteen years of clinical practice, supervision, and

graduate teaching in psychology and counseling. Chapters include highly practical upgrades on standard therapy techniques and ideas for continual therapist development (that respect the busy life of the mental health professional!). The book is made up of ten sections, each with ten short chapters, each readable in under five minutes. It is an indispensable resource for practicing mental health clinicians, including counselors, clinical social workers, psychologists, and other helpers, as well as advanced students in counseling or similar graduate programs"-- For 25 years, *Upgrading and Repairing PCs* has been the world's #1 guide to PC hardware: The single source for reliable information on troubleshooting and fixing problems, adding hardware, optimizing performance, and building new PCs. Now, better than ever, this 22nd edition offers beefed-up coverage of the newest hardware innovations and maintenance techniques, plus more than two

hours of new DVD video. Scott Mueller delivers practical answers about PC processors, mother-boards, buses, BIOSes, memory, SSD and HDD storage, video, audio, I/O, input devices, networks, Internet connectivity, power, and much more. You'll find the industry's best coverage of diagnostics, testing, and repair-plus cutting-edge discussions of improving performance via overclocking and other techniques. Mueller has taught thousands of professionals in person and millions more through his books and videos-nobody knows more about keeping PCs running perfectly. Whether you're a professional technician, a small business owner trying to save money, or a home PC enthusiast, this is the only PC hardware book you need! NEW IN THIS EDITION Detailed information about the Intel Turbo Boost and AMD Turbo Core built-in overclocking technology found in many new processors. Coverage of the new inexpensive "hybrid" hard drives, combining Solid State

Drive (SSD) and magnetic storage technology in the same high-performance drive. Coverage of the latest USB 3.0 chipsets, drives, and other peripherals. Coverage of the latest 50Mbps and faster internet connection speeds and the hardware you need to fully take advantage of them. Coverage of the latest high-performance Solid State Drives (SSDs) and SSD technology. Technical details about the Unified Extensible Firmware Interface (UEFI) BIOS, which is required for motherboards to be able to boot from drives larger than 2TB. Detailed information about the new 4K physical sectoring advanced format used on the highest capacity hard drives. Technical details and information about the latest 32nm and 45nm multi-core processors from Intel and AMD. Detailed information about the Graphics Processing Unit (GPU) available as an optional built-in feature in some new processors. Coverage of the latest motherboard chipsets, including support for SATA

6Gbps. Coverage of the latest SDXC (Secure Digital Extended Capacity) 4.0 and later high capacity and high performance flash drives. Detailed information about the 6/8-pin PCI Express graphics power connectors required to support the latest high-end video cards. Information about the 80 PLUS standards for highly efficient power supplies, and how this combined with proper power-management settings can save a tremendous amount of energy (and money) each year. ON THE DVD Get 2 hours of up-to-the minute, studio-quality how-to videos-all playable on your DVD player or computer! In this edition, Scott Mueller offers true insider information about several of the key components in a PC, including motherboards, solid-state drives, and more. You will see a detailed tour of a modern high-performance motherboard, showing all the components from the processor socket and CPU voltage regulators to the audio and network chipsets, and more. You'll learn how all the devices on the board are

interconnected, so you can more easily understand their importance. There is a detailed segment comparing solid-state drives (SSDs) to conventional hard disk drives (HDDs), explaining all the differences and similarities between them in an easy to understand fashion. Finally, there are several segments on building a state-of-the art system from scratch using a high-performance overclockable motherboard and processor combination. You'll see tips on how to best prepare the components, how to assemble the system properly, how to make the front panel connections much easier to deal with, and finally how to route the cables for maximum airflow and ease of future upgrades or repairs. Now in its fourth edition, this industry classic networking reference gives readers real world, in-depth explanations of confusing networking architectures and protocols, and helps them track down and repair costly networking problems. Based on case

studies from Brazil, Vietnam, Indonesia and India, this volume examines small and medium sized firms (SME) clusters. It analyses a range of clusters in less developed countries which are attempting sustainability through social upgrading. A detailed guide to the technical aspects of refurbishing and upgrading buildings, providing solutions to a range of problems, challenges and issues with technical drawings and case-studies. Essential purchase for all construction professionals engaged in this kind of work and students of construction, surveying and architecture. This is the eBook version of the print title. Note that the eBook does not provide access to the practice test software that accompanies the print book. ÷ Learn, prepare, and practice for MCSA 70-687 exam success with this Cert Guide from Pearson IT Certification, a leader in IT certification. Best-selling authors and expert instructors Don Poulton, Randy Bellet, and Harry Holt share preparation hints and test-taking tips, helping you identify areas of weakness and improve both your conceptual knowledge and hands-on skills. Material is presented in a concise manner, focusing on increasing your understanding and retention of exam topics. ÷ The book presents you with an organized test preparation routine through the use of proven series elements and techniques. Exam topic lists make referencing easy. Chapter-ending Exam Preparation Tasks help you drill on key concepts you must know thoroughly. Review questions help you assess your knowledge, and a final preparation chapter guides you through tools and resources to help you craft your final study plan. ÷ Well-regarded for its

level of detail, assessment features, and challenging review questions and exercises, this study guide helps you master the concepts and techniques that will enable you to succeed on the exam the first time. ∫ The study guide helps you master all the topics on the MCSA 70-687 exam, including the following:

- Windows 8.1 introduction
- Hardware readiness and compatibility
- Installation and upgrades, including VHDs
- Migrating users, profiles, and applications
- Configuring devices and device drivers
- Installing, configuring, and securing applications
- Configuring Internet Explorer
- Configuring Hyper-V virtualization
- Configuring TCP/IP, network settings, and network security
- Configuring and securing access to files and folders, including OneDrive and NFC
- Configuring local security, authentication, and authorization
- Configuring remote connections and management
- Configuring and securing mobile devices
- Configuring Windows Updates

Managing/monitoring system performance ∫ The book provides the most up-to-date information on testing and development of hydroprocessing catalysts with the aim to improve performance of the conventional and modified catalysts as well as to develop novel catalytic formulations. Besides diverse chemical composition, special attention is devoted to pore size and pore volume distribution of the catalysts. Properties of the catalysts are discussed in terms of their suitability for upgrading heavy feeds. For this purpose atmospheric residue was chosen as the base for defining other heavy feeds which comprise vacuum gas oil, deasphalted oil and vacuum residues in addition to topped heavy crude and bitumen. Attention is paid to deactivation with the aim to extend catalyst life during the operation. Into consideration is taken the loss of activity due to fouling, metal deposition, coke

formed as the result of chemical reaction and poisoning by nitrogen bases. Mathematical models were reviewed focussing on those which can simulate performance of the commercial operations. Configurations of hydroprocessing reactors were compared in terms of their capability to upgrade various heavy feeds providing that a suitable catalyst was selected. Strategies for regeneration, utilization and disposal of spent hydroprocessing catalysts were evaluated. Potential of the non-conventional hydroprocessing involving soluble/dispersed catalysts and biocatalysts in comparison with conventional methods were assessed to identify issues which prevent commercial utilization of the former. A separate chapter is devoted to catalytic dewaxing because the structure of dewaxing catalysts is rather different than that of hydroprocessing catalysts, i.e., the objective of catalytic dewaxing is different than that of the conventional hydroprocessing, The relevant

information in the scientific literature is complemented with the Patent literature covering the development of catalysts and novel reactor configurations. Separate chapter was added to distinguish upgrading capabilities of the residues catalytic cracking processes from those employing hydroprocessing. Upper limits on the content of carbon residue and metals in the feeds which can still be upgraded by the former processes differ markedly from those in the feeds which can be upgraded by hydroprocessing. It is necessary that the costs of modifications of catalytic cracking processes to accommodate heavier feeds are compared with that of hydroprocessing methods. Objective of the short chapter on upgrading by carbon rejecting processes was to identify limits of contaminants in heavy feeds beyond which catalytic upgrading via hydroprocessing becomes uneconomical because of the costs of catalyst inventory and

that of reactors and equipment.

- Comprehensive and most recent information on hydroprocessing catalysts for upgrading heavy petroleum feeds.
- Compares conventional, modified and novel catalysts for upgrading a wide range of heavy petroleum feeds.
- Comparison of conventional with non-conventional hydroprocessing, the latter involving soluble/dispersed catalysts and biocatalysts.
- Development and comparison of mathematical models to simulate performance of catalytic reactors including most problematic feeds.
- Residues upgrading by catalytic cracking in comparison to hydroprocessing.

Wearable gadgets monitor our health at home. Advances in 3D printing might eradicate transplantation waiting lists forever. Surgical robots are no longer just the stuff of sci-fi. Trained physician, researcher, and medical futurist Dr. Bertalan Mesko gives talks on the future of health care-highlighting how

disruptive innovations let us keep the human touch in medicine rather than take it away. My Health : Upgraded : Revolutionary Technologies to Bring a Healthier Future answers questions like whether robots will ever take the job of physicians or whether we'll be able to predict diseases with genomics. To help illustrate his vision for the future, Dr. Mesko shares his own experiences with wearable, health-enhancing tech devices, providing a look at not only medicine now but also where it's heading. The catch ? The practice of medicine still needs that human touch. Biofuels and Bioenergy: Opportunities and Challenges is the first of two volumes that address the technological developments and challenges in the production of a broad range of biofuels and bioenergy products from renewable feedstock. The book emphasizes the opportunities and challenges involved in various processes including fermentation, transesterification, microbial

fuels cells, liquefaction, gasification, and pyrolysis. These are also considered from a biorefinery perspective and discuss all common biomass feedstocks. In addition, the book presents new research on microalgae from waste water treatment, large scale production of microalgae, microbial biooil production, biogas production, computational tools for manipulation of metabolic pathway for enhanced biogas production, production of biofuel from genetically modified microalgal biomass, techno-economic analysis, environmental impact and life cycle analysis. Biofuels and Bioenergy is an ideal reference on the latest research for researchers and students working in the area of biofuels and renewable energy. Addresses biological and chemical methods of biofuel and bioenergy production Provides industry case studies alongside in-depth techno-economic analysis, environmental impact, and life cycle assessment of biofuels

production Focuses on the commercial viability of production processes As a PHP 4 user, chances are that an upgrade to PHP 5 is in your future. Upgrading to PHP 5 is for the existing PHP developer who either already owns a book on PHP 4 or has learned from web sites and mailing lists. Written by the coauthor of PHP Cookbook, this is the book an experienced PHP programmer needs to get started with the latent release. Upgrading to PHP 5 zeros in on PHP 5's new features and covers these features definitively. You'll find a concise appraisal of the differences between PHP 4 and PHP 5, a detailed look at what's new in this latent version, and how these changes affect your work. Then, because this is written for veteran PHP programmers, you can go directly to more advanced features and gain valuable hands-on experience using the short code samples that are included throughout the book. The final chapter is a complete example program that pulls together all the

previously introduced material into a single application. Upgrading to PHP 5 won't make you wade through information you've covered before; author Adam Trachtenberg takes you straight into the heart of all that's new in PHP 5. By the time you've finished this book, you'll know PHP 5 in practice as well as in theory. **NEW YORK TIMES BESTSELLER** • "If Michael Crichton had written a superhero novel, it would look a lot like Upgrade."—The New York Times Book Review "You don't so much sympathize with the main character as live inside his skin."—DIANA GABALDON, #1 New York Times bestselling author of the Outlander series "Mysterious, fascinating, and deeply moving—exploring the very nature of what it means to be human."—ALEX MICHAELIDES, #1 New York Times bestselling author of The Silent Patient and The Maiden **ONE OF THE BEST BOOKS OF THE YEAR:** Time, She Reads The mind-blowing new thriller from the New York Times

bestselling author of Dark Matter and Recursion—currently in development as a motion picture at Steven Spielberg's Amblin Partners "You are the next step in human evolution." At first, Logan Ramsay isn't sure if anything's different. He just feels a little . . . sharper. Better able to concentrate. Better at multitasking. Reading a bit faster, memorizing better, needing less sleep. But before long, he can't deny it: Something's happening to his brain. To his body. He's starting to see the world, and those around him—even those he loves most—in whole new ways. The truth is, Logan's genome has been hacked. And there's a reason he's been targeted for this upgrade. A reason that goes back decades to the darkest part of his past, and a horrific family legacy. Worse still, what's happening to him is just the first step in a much larger plan, one that will inflict the same changes on humanity at large—at a terrifying cost. Because of his new abilities, Logan's the one

person in the world capable of stopping what's been set in motion. But to have a chance at winning this war, he'll have to become something other than himself. Maybe even something other than human. And even as he's fighting, he can't help wondering: what if humanity's only hope for a future really does lie in engineering our own evolution? Intimate in scale yet epic in scope, Upgrade is an intricately plotted, lightning-fast tale that charts one man's thrilling transformation, even as it asks us to ponder the limits of our humanity—and our boundless potential. This book aims to correlate the latest advances in, and applications of, biomass and resource utilization technology, energy chemical industry, biochemical industry, paper and fiber engineering, chemical process machinery, nano-biochemistry and nano-materials, medicine and biomedical engineering, etc. It will serve as a useful handbook guide to those fields. Volume is indexed by Thomson Reuters CPCI-S (WoS). They were warned maybe things

were moving too fast between them, but Sunshine and Jonas claimed to be in love after just a few months. They soon find themselves bumping heads, especially when Monsta's name is brought up. Jonas begins to question if Sunshine is truly over her abusive ex and just using him to fill the void in her heart while he's locked up. Sunshine finds herself dealing with different emotions and finding out what's best for her and Mya. All while Jonas fights his own personal demons that he forgot to mention to Sunshine. Finding a small loophole in the system, Monsta plays the role of his life to win back his freedom so he can get his family back. He stops at nothing to get his way, not caring who he hurts in the process. Keisha pops back up on the scene looking for freedom. Will she be able to escape Detroit crooked police or will Monsta find her first? Some secrets are shared, and people's true intentions are brought to light in this finale. Enhancement packages Our brains are a thousand times more incredible than anything else we will ever encounter.

Every great accomplishment human beings have achieved was the work of the brain. In fact, our brains possess infinite potential that allows us to do and be anything. By using this potential well, we become a "Power Brain" that can not only create our personal fate, but that of the entire planet. To develop our brains' potential, it's useful to liken the brain to a computer with an operating system. We have a Brain Operating System (BOS) composed of our beliefs and preconceptions that we can change and upgrade until our

brains run optimally. Recognizing the potential in our brain beyond what we've been able to use so far, Ilchi Lee began investigating brain development principles and methods. He compiled them into a comprehensive self-development system with five steps called Brain Education. Refined over the years by new scientific research and the experiences of those who use it, Brain Education has become an academic discipline that's presented in a variety of ways, including school educational programs and corporate training. While *The Power Brain* is primarily about the brain, this book does not focus on the anatomical or neuro-physiological functions of the brain. Rather, it serves as a Brain Operating System user's manual that describes how to use our brain to discover our value, recreate the story of our lives, and claim a new destiny. Improving our lives, and consequently, our world, through brain development is a skill that anyone can understand, practice, and apply

to everyday life. Access to 3 hours of troubleshooting videos as well as PDFs of previous editions are available through product registration—see instructions in back pages of your eBook. Emerging interfaces such as mSATA, USB 3.1, and M.2 Updated coverage of building PCs from scratch—from choosing and assembling hardware through BIOS setup and troubleshooting The space shuttle is a unique national resource. One of only two operating vehicles that carries humans into space, the space shuttle functions as a scientific laboratory and as a base for construction, repair, and salvage missions in low Earth orbit. It is also a heavy-lift launch vehicle (able to deliver more than 18,000 kg of payload to low Earth orbit) and the only current means of returning large payloads to Earth. Designed in the 1970s, the shuttle has frequently been upgraded to improve safety, cut operational costs, and add capability. Additional upgrades have been proposed—and some are under way—to combat obsolescence, further reduce operational costs, improve

safety, and increase the ability of the National Aeronautics and Space Administration (NASA) to support the space station and other missions. In May 1998, NASA asked the National Research Council (NRC) to examine the agency's plans for further upgrades to the space shuttle system. The NRC was asked to assess NASA's method for evaluating and selecting upgrades and to conduct a top-level technical assessment of proposed upgrades. More than 1.2 million households in South Africa live in informal settlements, without access to adequate shelter, services or secure tenure. There has been a gradual shift to upgrading these informal settlements in recent years, and there have been some innovative experiments. *Upgrading Informal Settlements in South Africa: a partnership-based approach* examines the successes and challenges of informal settlement upgrading initiatives in South Africa and contextualises these experiences within global

debates about informal settlement upgrading and urban transformation. The book discusses:

- The South African informal settlement upgrading agenda from local, national and international perspectives
- South African 'city experiences' with informal housing and upgrading
- The role of partnerships, actors and capabilities in pursuing an incremental upgrading agenda
- Tools, instruments and methodologies for incremental upgrading
- Implications of the upgrading agenda for the transformation of cities

The book has been written and edited by a wide range of practitioners and researchers from government, NGOs, the private sector and academia. It covers theory and practice and represents a vast accumulated body of housing experience in South Africa.

Pakistan Super League (PSL) is a franchise-based professional Twenty20 cricket league started by the Pakistan Cricket Board (PCB) in February 2016. As the name suggests, the tournament is played in Pakistan with

franchise teams representing different cities. Initially, there were five franchises, Islamabad United, Karachi Kings, Lahore Qalandars, Peshawar Zalmi, and Quetta Gladiators, but in 2018, a sixth team, Multan Sultans, was added. Each team is allowed to have a maximum of 21 players, which includes a combination of local and foreign players. The tournament has rapidly gained popularity and has attracted many high-profile international players such as Chris Gayle, Shane Watson, Kevin Pietersen, and Darren Sammy. The league takes place annually, usually in February and March, and comprises of a double round-robin format, in which each team plays against each other twice before four teams advance to the playoffs. The playoffs consist of two semi-finals before the final, which takes place at the National Stadium in Karachi. The PSL has been beneficial for the development of cricket in Pakistan and has significantly boosted the country's image on the international cricketing
