Drawing on more than sixty on-the-record interviews with all the major players, *Triumph and Demise* is full of remarkable disclosures. It is the inside account of the hopes, achievements and bitter failures of the Labor Government from 2007 to 2013. Kevin Rudd and Julia Gillard came together to defeat John Howard, formed a brilliant partnership and raised the hopes of the nation. Yet they fell into tension and then hostility under the pressures of politics and policy. Veteran journalist Paul Kelly probes the dynamics of the Rudd-Gillard partnership and dissects what tore them apart. He tells the full story of Julia Gillard's tragedy as our first female prime minister—her character, Rudd's destabilisation, the carbon tax saga and how Gillard was finally pulled down on the eve of the 2013 election. Kelly documents the most misunderstood event in these years—the rise of Tony Abbott and the reason for his success. It was Abbott's performance that denied Rudd and Gillard the chance to recover. Labor misjudged Abbott and paid the price. Kelly writes with a keen eye and fearless determination. His central theme is that Australian politics has entered a crisis of the system that, unless corrected, will diminish the lives of all Australians. *Australia's Rural, Remote and Indigenous Health 3e* is a practical guide to the delivery of health care in rural and remote Australia. Drawing on personal experiences of rural and remote practitioners, historical accounts, literature analysis and epidemiology, this frank and engaging text examines the economic, social and political forces that shape healthcare in rural and remote Australia. With limited current resources to support studies in rural and remote healthcare, this title bridges the gap by offering valuable insights into Indigenous life and social determinants of health through the use of storytelling. It is the perfect guide for anyone working in or planning to work in rural, remote or Indigenous Australia; and for those undertaking cultural studies, or social policy. Only text covering both rural and remote health in Australia Placement preparation with StudentConsult video interviews of experienced rural and remote practitioners providing first-hand experience of rural and remote practice Pause and Think questions provide a framework to apply learned knowledge to practice Pause and think question boxes train the reader to critically assess and apply concepts to practical situations. New Chapter: Working with Indigenous Australians - Written by Shannon Springer, describes how to consult with Indigenous patients and draws on his experience in clinical practice. It offers consultation signposts and practical principles for working with Indigenous Australians. New Chapter: Remote health practice - Written by Sue Lenthall, this chapter examines the differences and commonalities between the remote communities and then applies this information to a case study on 'a day in the life of a remote area nurse'. It presents a remote client consultation model and a StudentConsult audio consultation between a nurse and a distant doctor, as well as tips for working in remote practice. The audio consultation gives a first-hand account of the experience of a remote area nurse managing an emergency case. Video and audio content - video interviews of experienced rural, remote and Indigenous health practitioners as well as students. The videos contain first-hand experience of rural and remote practice as well as tips to help prepare those new to rural or remote practice. How poignant it is to look at some of Gould's beautiful images of our animals and know that some are no longer with us, and some are fighting for their lives? In this book, author Fred Ford compares Gould's world, and the world that the animals live in at that time, with the world today. John Gould's Extinct and Endangered Mammals of Australia includes 46 Australian mammal species that, today, are threatened or extinct and that were portrayed in the lavish colour plates in John Gould's 1863 publication, *The Mammals of Australia*. Each animal 'opener spread' begins with a Gould plate accompanied by 'At a Glance'—a very short summary; the conservation status according to the EPBC (Environment Protection and Biodiversity Conservation) list, the species names, a map of its former and current distribution and sites of reintroduction; and a timeline of the species history since European colonisation. Accompanying the pictures are accounts of the animals as they lived in the relatively untouched Australia that John Gould knew, and evidence of the attitudes of European settlers towards the native fauna. The author provides the reader with fascinating, and often poignant, material and stories of what would be considered today as shameful behaviour and attitudes towards Australia's native fauna. In this book are not only sobering stories of the fate of these animals after Gould's time, but also success stories of reintroducing species to places, ridding areas of introduced pests, and preserving habitat. The 7th edition of *Management* is once again a resource at the leading edge of thinking and research. By blending theory with stimulating, pertinent case studies and innovative practices, Robbins encourages students to get excited about the possibilities of a career in management. Developing the managerial skills essential for success in business—by understanding and applying management theories—is made easy with fresh new case studies and a completely revised suite of teaching and learning resources available with this text. This volume explores the domestic and transnational considerations associated with Indonesia's ascent, referring to its rise in terms of hard and soft power and its likely trajectory in the future. The range of contributors analyse economic resources, religious harmony, security, regional relations, leadership and foreign policy. *Australian Climate Policy and Diplomacy* provides a well overdue critique of existing, and high-profile, publications that convey the 'greenhouse mafia' hypothesis, which posits that Australia's weak policy response to climate change is the result of a menacing domestic fossil fuel lobby. Ben L. Parr argues that the shared government–industry discourse about protecting Australia's industrial competitiveness has had a more decisive influence in shaping and legitimising Australian climate policy than the direct lobbying tactics of the fossil fuel industry. Parr also reveals how the divergent foreign policy discourses and traditions of Australia's two major political parties – as internationalist versus alliance-focused – have enabled and constrained their climate diplomacy and domestic policies over time. To demonstrate his argument, he presents a discourse analysis woven into a chronological policy narrative, comprising more than 1000 primary texts (media releases, interviews, and speeches) generated by prime ministers and key fossil fuel lobbyists. Overall, this volume illustrates how domestic forces have and are influencing Australia's climate policy. In doing so, it also provides a framework that can be adapted to examine climate mitigation policies in other countries, notably Canada and the US. This book will be of interest to students and scholars of climate change, environmental policy and governance, and Australian climate change policy and politics more specifically, as well as policymakers and practitioners working in these fields. This is a good time to reflect on opportunities and challenges for Australia in Latin America. Impressive economic growth and opportunities for trade and investment have made Latin America a dynamic area for Australia and the Asia Pacific region. A growing Latin American population, Australia's attractiveness to Latin American students, a fascination with the cultural vibrancy of the Americas and an awareness of Latin America's increasingly independent stance in politics and economic diplomacy, have all contributed to raising the region's profile. This collection of essays provides the first substantial introduction to Australia's evolving engagement with Latin America, identifying current trends and opportunities, and making suggestions about how relationships in trade, investment, foreign aid, education, culture and the media could be strengthened. This book offers a comprehensive analysis and comparison of the practice and case law of the European Court of Human Rights and the UN Committee against Torture in the assessment of individual complaints concerning the principle of non-refoulement. What has happened on Nauru and Manus since Australia began its most recent offshore processing regime in 2012? This essential book provides a comprehensive and uncompromising overview of the first three years of offshore processing since it recommenced in 2012. It explains why offshore processing was re-established, what life is like for asylum seekers and refugees on Nauru and Manus, what asylum seekers, refugees and staff in the offshore detention centres have to say about what goes on there, and why the truth has been so hard to find. In doing so, it goes behind the rumours and allegations to reveal what is known – and what still is not known – about Australia's offshore detention centres. *Ethics and Law for Australian Nurses* provides an innovative approach to nursing ethics and the legal context of nursing practice. The *Routledge Handbook of Soft Power* is the first volume to offer a comprehensive and detailed picture of soft power and associated forms of public diplomacy. The terms soft power and public diplomacy have enormous currency in media and policy discourse, yet despite all the attention the terms remain conceptually ambiguous for analysts of international influence. The consequence is that the terms have survived as powerful, yet criticized, frames for influence. Divided into two main parts, Part I outlines theoretical problems, methodological questions, the cultural imperative and the technological turn within the study of soft power and Part II focuses on bringing the theory into practice through detailed discussion of key case studies from across the Americas, Europe, the Middle East, Africa and Asia. This innovative handbook provides a definitive resource for students and scholars seeking to familiarize themselves with cutting-edge debates and future research on soft power and will be of interest to those studying and researching in areas such as international relations, public diplomacy and international communication. *Lure of the Big Screen* explores film exhibition and consumption in rural parts of the UK and Australia, where film theatres are often highly valued as spaces around which isolated communities can gather and interact. Going beyond national borders, this book examines how theatres in areas of social and economic decline are sustained by resourceful individuals and sub-commercial operating structures. Systematic analysis of cinemas in non-metropolitan locations has yielded an original five-tiered clustering model through which Karina Aveyard recognizes a range of types between large commercial multiplexes in stable regional centres and their smallest improvised counterparts in remote settlements. The media environment of today is characterised by two critical factors: the development and adoption of ubiquitous mobile devices, and the strengthening of connectivity enabled by advances in ICT infrastructure and social media platforms. These developments have changed interactions and relationships between citizens and cultural custodians, as well as the ways archives are developed, kept, and used. Archives are now characterised by greater socialisations and networks that actively contribute to the signification of cultural heritage value. A range of new stakeholders, many of whom include the public, have sought to define what needs to be collectively remembered and forgotten. The world in which one or a few professional archivists worked on the sole mission of shaping how a society remembers is being displaced by a more democratised culture and the new generation of digitally networked archivists that are its natives. Using a range of case studies and perspectives, this book provides insights to the many ways that ubiquitous media have influenced archival practices and research, as well as the social and civic consequences of present-day archives. This book was published as a special issue of *Archives and Manuscripts*. "Services Marketing is well known for its authoritative presentation and strong instructor support. The new 6th edition continues to deliver on this promise. Contemporary Services Marketing concepts and techniques are presented in an Australian and Asia-Pacific context. In this edition, the very latest ideas in the subject are brought to life with new and updated case studies covering the competitive world of services marketing. New design features and a greater focus on Learning Objectives in each chapter make this an even better guide to Services Marketing for students. The strategic marketing framework gives instructors maximum flexibility in teaching. Suits undergraduate and graduate-level courses in Services Marketing." *Business Ethics* will equip students with the strategies necessary to analyse and improve the broad scope of business ethics today. This book reports changes in GP ordering of imaging tests in Australia from 2002-03 to 2011-12, and evaluates alignment between guidelines and recent GP test ordering for selected problems. Over the decade, 9,802 GPs participated in BEACH, providing details of 980,200 GP-patient encounters. The likelihood of GPs ordering imaging in the management of a problem increased over time. In recent practice, at least one imaging test was ordered at 9% of encounters, at a rate of 10 imaging tests per 100 encounters. Diagnostic radiology was the most commonly ordered type of imaging test, but the order rate decreased over time, with a shift toward orders for ultrasound, CT and MRI, which all significantly increased. Eight selected problems accounted for one-third of all imaging orders. Imaging ordering behaviour suggests broad compliance with published guidelines in the management of osteoarthritis, shoulder problems, bursitis/tendonitis/synovitis, abdominal pain and other musculoskeletal injuries. Current ordering patterns for knee problems and some sprains/strains have potential for improvement. The ordering pattern for new presentations of back problems was inconsistent with all established guidelines for management of back problems. Electronic health records are widely regarded as the 'connective tissue' of any modern healthcare system. For some they represent a 'dangerous enthusiasm' and for others a key enabler of 'disruptive innovation'. Many governments have made major policy and financial investments in digitalizing health records but their implementation has frequently run into opposition from doctors, had lukewarm responses from patients, and raised considerable concerns for privacy advocates and others worried by the security of sensitive health data and the risks of national data-bases. This book draws upon the concept of 'orders of worth' to reveal the moral dimensions of the medical division of labour and to delve deeper into understanding why electronic records have been so difficult to implement and the sources of opposition to them. The authors argue that digitalization disrupts the moral orders which define rights and responsibilities for the sharing and exchanging of patient medical data. This is illustrated through longitudinal studies of two of the most controversial attempts to introduce national systems - a patient controlled electronic record in Australia and a national summary care record that was part of the ill-fated NHS national program for IT in England. The authors conclude by using the lessons from these national experiences and insights from two regional projects in each country to suggest how the idea of electronic records might be re-thought. It is a must read for anyone concerned about health information and the implications of how it is shared and exchanged in a digital world. Australia has always been reliant on 'great and powerful friends' for its sense of national security and for direction on its foreign policy—first on the British Empire and now on the United States. Australia has actively pursued a policy of strategic dependence, believing that making a grand bargain with a powerful ally was the best policy to ensure its security and prosperity. *Dangerous Allies* examines Australia's history of strategic dependence and questions the continuation of this position. It argues that international circumstances, in the world and in the Western Pacific especially, now make such a policy highly questionable. Since the fall of the Soviet Union, the United States has also changed dramatically, making it less relevant to Australia and a less appropriate ally on which Australia should rely. Malcolm Fraser argues that Australia should adopt a much greater degree of independence in foreign policy, and that we should no longer merely follow other nations into wars of no direct interest to Australia or Australia's security. He argues for an end to strategic dependence and for the timely establishment of a truly independent Australia. This book challenges dominant thinking about early career teachers and their work. It offers an in-depth and critical analysis of policies concerning the work of early career teachers and how they are supported during this critical period, when they are highly vulnerable to leaving the profession. Moreover, the book provides examples from actual practice that illustrate how to help early career teachers make a successful transition into the profession. These practices promote early career teachers' development and help the profession as a whole to capitalize on the new knowledge and skills that these teachers bring to their classrooms and their students. The book is divided into two main parts. Part 1 deals with the difficult to define process of retaining early career teachers, and its respective chapters consider this broad issue from an international perspective. They explore how policies and practices have an impact on what happens in schools, and what it means to be a teacher and to teach. In turn, Part 2 focuses on the need to reconsider the policies and practices that create the 'problem' of early career teachers, and offers alternative ways forward. Each chapter addresses a specific aspect of the early career teacher retention issue, contributing to a greater understanding of how we can rethink the work of early career teachers so that they can more successfully transition into the profession. There continues to be strong interest within the food industry in developing new products which offer functional health benefits to the consumer. The premium prices that can be charged make these added-value products lucrative for manufacturers, and they are also commercially popular. Dairy foods are central to this sector: they are good delivery systems for functional foods (yoghurts, milk drinks, spreads) and are also rich in compounds which can be extracted and used as functional ingredients in other food types. *Milk and Dairy Products as Functional Foods* draws together a wealth of information regarding the functional health benefits of milk and dairy products. It examines the physiological role and the claimed health effects of dairy constituents such as proteins, bioactive peptides, conjugated linoleic acid (CLA), omega 3 fatty acids vitamin D and calcium. These constituents have been shown to be, for example, anticarcinogenic, anti-inflammatory, antihypertensive, hypocholesterolemic, immune-modulating and antimicrobial. This book examines the evidence for these claims, and investigates practical approaches for utilising these attributes. The book is aimed at dairy scientists and technologists in industry and academia, general food scientists and technologists, microbiologists and nutritionists together with all those involved in the formulation and production of functional food products. This edited collection includes eleven major case studies and one general review of rhetorical contest in Australian politics. The volume showcases the variety of methods available for studying political speech, including historical, theoretical, institutional, and linguistic analyses, and demonstrates the centrality of language use to democratic politics. The chapters reveal errors in rhetorical strategy, the multiple and unstable standards for public speech in Australia, and the links between rhetoric and action. The length of Australian political speech is traversed, from pre-Federation to the Gillard minority government (2010–13), and the topics similarly range from Alfred Deakin's nation building to Kevin Rudd's Apology to the Stolen Generations. This fresh collection is intended to stimulate and advance the study of political rhetoric in Australia. This book provides a truly comprehensive analysis of the 2013 federal election in Australia, which brought the conservative Abbott government to power, consigned the fractious Labor Party to the Opposition benches and ended the 'hung parliament' experiment of 2010–13 in which the Greens and three independents lent their support to form a minority Labor government. It charts the dynamics of this significant election and the twists and turns of the campaign itself against a backdrop of a very tumultuous period in Australian politics. Like the earlier federal election of 2010, the election of 2013 was an exercise in bipolar adversarial politics and was bitterly fought by the main protagonists. It was also characterised (again) by leadership changes on Labor's side as well as the entry of new political parties anxious to deny the major parties a clear mandate. Moreover, the 2013 election continued the trend whereby an increasing proportion of the electorate has chosen not to vote for one of the main two political parties. While the 2013 election delivered a clear victory to the Coalition in the Lower House, it simultaneously produced a much more mixed outcome in the Senate, where the Greens managed to record their largest ever representation and a new party, the Palmer United Party, initially secured three Senate positions at its first attempt (together with the election of Clive Palmer to a Queensland seat in the House of Representatives). With minor and micro parties also winning Senate seats amounting to a total of 18 Senators on the cross-benches, the Abbott government's ability to govern and pass legislation was placed in some doubt. The 2013 election result suggested that far from ending the preceding tumultuous period of Australian politics, it merely served to prolong this era indefinitely. The 2013 campaign was one of the longest on record, arguably commencing when the besieged Prime Minister Julia Gillard announced the date for the election in late January 2013 – then over seven months away. This unconventional tactic overshadowed the election from that date onwards – providing a definite timeline for Labor infighting, influencing the largely negative tactics of the Opposition, and encouraging new parties to proliferate to contest the election. This volume traces these formative influences on the campaign dynamics and explains the electoral outcome that occurred (including the 2014 re-election for the Western Australian Senate seats ordered by the High Court). *Abbott's Gambit* includes insightful contributions from academic experts, campaign directors and electoral watchers, political advisers and professional psephologists. Contributors utilise a wide range of sources and approaches, including the Australian Election Survey, to provide a detailed analysis of this important federal election. In Australia, as in many comparable democracies, the role of the media in the political process is high on the public agenda. There is a perception of widespread disillusionment with and disengagement from politics amongst voters, and criticism of the media for failing to fulfil their democratic responsibilities adequately. This book evaluates public perceptions of the performance of the political media in the context of the declared aims and objectives of media producers. From there the authors present findings for improving the capacity of political media to engage and inform their audiences in ways which enhance the quality and popular legitimacy of the democratic process. These conclusions are of import not only to Australians, but to observers of mediated politics in the UK, the US and other countries where similar debates around the 'crisis of public communication' are on-going. *Media Framing of the Muslim World* examines and explains how news about Islam and the Muslim world is produced and consumed, and how it impacts on relations between Islam and the West. The authors cover key issues in this relationship including the reporting on war and conflict, terrorism, asylum seekers and the Arab Spring. This comprehensive handbook, prepared by leading ocean policy academics and practitioners from around the world, presents in-depth analyses of the experiences of fifteen developed and developing nations and four key regions of the world that have taken concrete steps toward cross-cutting and integrated national and regional ocean policy. All chapters follow a common framework for policy analysis. While most coastal nations of the world already have a variety of sectoral policies in place to manage different uses of the ocean (such as shipping, fishing, oil and gas development), in the last two decades, the coastal nations covered in the book have undertaken concerted efforts to articulate and implement an integrated, ecosystem-based vision for the governance of ocean areas under their jurisdiction. This includes goals and procedures to harmonize existing uses and laws, to foster sustainable development of ocean areas, to protect biodiversity and vulnerable resources and ecosystems, and to coordinate the actions of the many government agencies that are typically involved in oceans affairs. The book highlights the serious conflicts of use in most national ocean zones and the varying attempts by nations to follow the prescriptions emanating from the 1982 UN Law of the Sea Convention and the outcomes of the 1992, 2002, and 2012 sustainable development summits. The interrelationship among uses and processes in the coast and ocean requires that ocean governance be integrated, precautionary, and anticipatory. Overall, the book provides a definitive state-of-the-art review and analysis of national and regional ocean policies around the world. *The Media and Financial Crises* provides unique insights into the debate on the role of the media in the global financial crisis. Coverage is inter-disciplinary, with contributions from media studies, political economy and journalists themselves. It features a wide range of countries, including the USA, UK, Ireland, Greece, Spain and Australia, and a completely new history of financial crises in the British press over 150 years. Editors Steve Schifferes and Richard Roberts have assembled an expert set of contributors, including Joseph E Stiglitz and Lionel

Barber, editor of the Financial Times. The role of the media has been central in shaping our response to the financial crisis. Examining its performance in comparative and historical perspectives is crucial to ensuring that the media does a better job next time. The book has five distinct parts: The Banking Crisis and the Media The Euro-Crisis and the Media Challenges for the Media The Lessons of History Media Messengers Under Interrogation The Media and Financial Crises offers broad and coherent coverage, making it ideal for both students and scholars of financial journalism, journalism studies, media studies, and media and economic history. Australia's agriculture and food industries are well placed to contribute to the economy's future growth given the robust prospects of global food demand and the continuing high international competitiveness of these sectors. This volume examines and compares the changes in the appropriate parameters of freedom of speech in the counter-terrorism context since 9/11, focusing on the US, UK, and Australia. Proceedings of the Australian Council for Health, Physical Education and Recreation (ACHPER) International Conference, held in Melbourne in November 2013. The conference themes included: state perspectives; international perspectives; national curriculum; pre-service teacher training; social media; sexuality; teaching and learning models; historical perspectives; and cultural diversity. Social Finance brings together rapid advances in what used to be called socially responsible investment. For example, finance for green businesses, and to support economic development both in deprived areas and developing countries. This book is the first serious and comprehensive treatment of the phenomenon. (Quelle: buch.ch) Australia's Rural, Remote and Indigenous Health 3e is a practical guide to the delivery of health care in rural and remote Australia. Drawing on personal experiences of rural and remote practitioners, historical accounts, literature analysis and epidemiology, this frank and engaging text examines the economic, social and political forces that shape healthcare in rural and remote Australia. With limited current resources to support studies in rural and remote healthcare, this title bridges the gap by offering valuable insights into Indigenous life and social determinants of health through the use of storytelling. It is the perfect guide for anyone working in or planning to work in rural, remote or Indeginous Australia; and for those undertaking cultural studies, or social policy. Only text covering both rural and remote health in Australia Placement preparation with StudentConsult video interviews of experienced rural and remote practitioners providing first-hand experience of rural and remote practice Pause and Think questions provide a frame Pause and think question boxes train the reader to critically assess and apply concepts to practical situations. New Chapter: Working with Indigenous Australians – Written by Shannon Springer, describes how to consult with Indigenous patients and draws on his experience in clinical practice. It offers consultation signposts and practical principles for working with Indigenous Australians. New Chapter: Remote health practice – Written by Sue Lenthall, this chapter examines the differences and commonalities between the remote communities and then applies this information to a case study on 'a day in the life of a remote area nurse'. It presents a remote client consultation model and a StudentConsult audio consultation between a nurse and a distant doctor, as well as tips for working in remote practice. The audio consultation gives a first-hand account of the experience of a remote area nurse managing an emergency case. Video and audio content – video interviews of experienced rural, remote and Indigenous health practioners as well as students. The videos contain first-hand experience of rural and remote practice as well as tips to help prepare those new to rural or remote practice. Abnormal Psychology in Context is a practical and contemporary handbook for both students of abnormal psychology and allied mental health practitioners. This text is one of the first of its kind, providing a specific focus on abnormal psychology from Australian and New Zealand - rather than US - perspectives. Nadine Pelling and Lorelle Burton have crafted a highly relevant resource, showcasing the most recent Australasian research in a clear format designed for ease of use. Written by leading researchers from Australia and New Zealand, each chapter examines a particular psychological disorder, details symptoms and responses, and includes relevant statistics, case studies, further reading and links to community resources. The chapters give equal weight to Australian and New Zealand experiences in abnormal psychology matters. Succinctly written yet richly detailed, Abnormal Psychology in Context is an essential resource that students can carry from the classroom into the workplace. Distributed Generation and its Implications for the Utility Industry examines the current state of the electric supply industry; the upstream and downstream of the meter; the various technological, business, and regulatory strategies; and case studies that look at a number of projects that put new models into practice. A number of powerful trends are beginning to affect the fundamentals of the electric utility business as we know it. Recent developments have led to a fundamental re-thinking of the electric supply industry and its traditional method of measuring consumption on a volumetric basis. These developments include decreasing electricity demand growth; the rising cost of fossil fuels and its impact on electricity costs; investment in energy efficiency; increasing numbers of prosumers who generate for some or all of their own needs; and market reforms. This book examines the implications of these trends in chapters focusing on distributed and decentralized generation, transactive energy, the role of electric vehicles, any much more. Discusses the technological, business, and policy trends most impacting the electric utility sector Provides an assessment of how fast and how soon distributed energy resources may make an impact on utility sales/revenues Explores, through a series of international case studies, the implementation of strategies that may help retain the viability of the utility industry Features contributions from a number of scholars, academics, experts and practitioners from different parts of the world focused on examining the future of the electric supply industry This book constitutes the thoroughly refereed proceedings of the Third Australian Symposium on Service Research and Innovation, ASSRI 2013, held in Sydney, NSW, Australia, in November 2013. Overall, eight research papers were carefully reviewed and selected from 18 submissions. They are multidisciplinary in scope and cover strategic, organizational, and technological dimensions, ranging from purely conceptual to concrete implementations and testing of service-related technological platforms. Taken together, these papers provide a snapshot of the critical concerns and developments in service-related research and cover some of the key areas of research focus. "Great careers are improvised." There are women who wait and women who don't. Author Angela Priestley once fell into the former camp. "I waited for things to happen to me rather than making them happen myself. It wasn't a matter of being lazy or unambitious but rather of simply believing the success I wanted and the things I desired from my career would simply arrive for me..." Women who Seize the Moment addresses the common issues that many women face in their careers. In our society it is not uncommon for people to dislike their job but still work extremely hard. There is an assumption that we will get that raise, eventually, we will get promoted, eventually, I will get my dream job, eventually. Women who Seize the Moment reveals 11 steps women should take to stop waiting for these turning points and make them happen. Coming up with excuses is easy, waiting to finish a diploma, waiting for the perfect job opening, waiting until you're 25, 30, 35, waiting to get that industry experience. However embracing all opportunities is what will turn your career around. Turning points are so important in shaping a woman's career. Women still have so many challenges to overcome in order to achieve the success they want; you don't want to also be your own enemy. Society has certainly come a long way however managing the competing interests of caring responsibilities with paid work, conscious and unconscious bias in the office, and battling a male-based hierarchy of leadership style still exists in many industries. In Women who Seize the Moment, Angela shares stories from women who've made the most of career turning points: those turning points they have created themselves and those that were beyond their control. They're the women who didn't wait to get the career they wanted, and still don't wait to get the success they desire. ?This edited collection shows how demographic analysis plays a pivotal role in planning, policy and funding decisions in Australia. Drawing on the latest demographic data and methods, these case studies in applied demography demonstrate that population dynamics underpin the full spectrum of contemporary social, economic and political issues. The contributors harness a range of demographic statistics and develop innovative techniques demonstrating how population dynamics influence issues such as electoral representation, the distribution of government funding, metropolitan and local planning, the provision of aged housing, rural depopulation, coastal growth, ethnic diversity and the well-being of Australia's Indigenous community. Moving beyond simple statistics, the case studies show that demographic methods and models offer crucial insights into contemporary problems and provide essential perspectives to aid efficiency, equity in public policy and private sector planning. Together the volume represents essential reading for students across the social sciences as for policy makers in government and private industry.
