Instrumentation was developed in 2004 and 2005 to measure the quantum efficiency of the Lawrence Berkeley National Lab (LBNL) total-depletion CCD's, intended for astronomy and space applications. This paper describes the basic instrument. Although it is conventional even to the parts list, there are important innovations. Axenon arc light source was chosen for its high blue/UV and low red/IR output as compared with a tungsten light. Intensity stabilization has been difficult, but since only flux ratios matter this is not critical. Between the light source and an Oriel MS257 monochromator are a shutter and two filter wheels. High-bandpass and low-bandpass filter pairs isolate the 150-nm wide bands appropriate to the wavelength, thus minimizing scattered light and providing order blocking. Light from the auxiliary port enters a 20-inch optical sphere, and the 4-inch output port is at right angles to the input port. An 80 cm drift space produces near-uniform illumination on the CCD. Next to the cold CCD inside the horizontal dewar is a calibrated reference photodiode which is regulated to the PD calibration temperature, 25°C. The ratio of the CCD and in-dewar reference PD signals provides the QE measurement. Additional cross-calibration to a PD on the integrating sphere permits lower-intensity exposures. "Break every chain. Break every chain. Break every chain." Those words will forever sing life into my soul. My newfound friend and LGBTQIA ally Tammi belted out this song with such power and majesty at the 2015 Reformation Project Cohort worship service! "There is power in the name of Jesus." Allyson Robinson, a Christian transwoman, preached a heartfelt sermon so moving I felt like the kingdom of God had already come to earth. James Brownson, Kathy Baldock and Matthew Vines each shared their eloquent, thoughtful and Scriptural lessons for how and why to welcome gay people to the church. "There's an army rising up in the name of Jesus to break every chain, break every chain, break every chain." These are just a few of the amazing memories from my experience as a straight ally worshipping with gay, lesbian and transgender people. I could only stand and affirm: God is in this! For me, the Wedding Banquet is ready and the celebration with people from every race, tribe and gender has already begun. However, the scene is not so wonderful for many parts of the Christian church. For many gender and sexual minorities, the experience of church is much darker. There is conflict, division, pain, and exasperation. Are these marks of Christianity? If we are clothed with such linen, how can we have any claim to be Christ-like? There is a better way. This book attempts to articulate the deeper, more robust gospel truths surrounding the supposed conflict of same-sex marriage and authentic Christian faith. Collectively, the authors have more than 100 years of experience teaching sports law. Thirty-three years ago, four of the authors published the inaugural edition of their popular law school textbook, *Sports Law: Cases and Materials*. The law school textbook was used as a model for *Sports Law for Sports Management*. The organization of the book

is in three parts: Amateur Sports, Professional Sports and Issues Common to Both. It is intended for textbook use in a three-credit hour undergraduate or graduate sport management course on law, governance, and regulation. It is designed to introduce sport management students to the structures of governance and regulation associated with high school, college, Olympic, and professional sports. It also provides an overview of the historical development of the governing bodies, conferences, federations, and leagues that administer and regulate amateur and professional athletics. The authors are committed to a skills-oriented, problem-based approach as the optimal way to study the subject matter. While the book can be used conventionally -- for those who choose to focus on cases, notes, and questions -- skills-based problems are featured throughout. Capstone problems and case simulations are designed to facilitate both the review of doctrine and the energy of experiential learning. Sports law is alive. Things happen fast in sports and sports law. Legal issues once on the horizon arise quickly. Our book is comprehensive enough to allow sport management professors to select topics that are of most interest to them and their students. It invites you to revisit your syllabus to confront current issues as they arise. The problem-based approach is helpful in this regard. It makes for a great classroom experience. Colloquially known as "Fitzgerald's," this is the official manual of N.J.'s legislature, filled with a variety of important facts for its politicians and lobbyists. This volume analyses and historicises the memory of 1968 (understood as a marker of an emerging will for social change around the turn of that decade, rather than as a particular calendar year), focusing on cultural memory of the powerful signifier '68' and women's experience of revolutionary agency. After an opening interrogation of the historical and contemporary significance of "1968" – why does it still matter? how and why is it remembered in the contexts of gender and geopolitics? and what implications does it have for broader feminist understandings of women and revolutionary agency? – the contributors explore women's historical involvement in "1968" in different parts of the world and the different ways in which women's experience as victims and perpetrators of violence are remembered and understood. This work will be of great interest to students and scholars of protest and violence in the fields of history, politics and international relations, sociology, cultural studies, and women's studies. Family tradition states that the family originated in Germany. It appears that the name was originally Karcher and the earliest ancestor was a Philip Karcher (1726-1806) who immigrated to America and settled in North Carolina. He was the father of at least four children. Their descendants moved to Illinois, Kansas, Georgia, Ohio and other parts of the United States. Vols. for 1871-76, 1913-14 include an extra number, The Christmas bookseller, separately paged and not included in the consecutive numbering of the regular series. Within Africa, Kenya can be seen as one of the frontrunners in furthering a transition to circular economy (CE). At the same time, the country still has important steps to make to mainstream it further in its broader economic policy framework. In Kenya, CE-related developments are mostly driven by the national government, which has been very active during the last five years in introducing policies to address waste-related problems and lately it is starting to develop a CE policy approach that goes beyond waste. Kenya's economy is still strongly dependent on its agriculture sector, which accounts for 34% of the country's GDP. Tourism is also an important contributor to the country's economy. Even though the share of manufacturing in Kenya's economy is still rather limited, the government is actively supporting its development as one of its four key economic priorities. Kenya ranks as the 6th African country in the latest edition of the World Competitiveness index, ranking 95th of the 141 countries assessed. From a circular economy perspective, the aforementioned sectors also hold substantial potential for further implementation of CE-related principles. Next to these sectors, there is significant potential for CE measures in the construction sector, which stands for the challenging task of addressing the current housing deficit of 2 million houses. Lastly, as in all countries, the waste sector will play a key enabling role for a further shift to a CE. Although this sector is limited in terms of its economic size, the CE transition can strengthen the links with the manufacturing sectors and strengthen the position of informal waste workers, both from an economic as well as from a social perspective. Kenya's agriculture sector, which is still mostly dominated by small-scale farmers and subsistence farming, holds substantial potential for circular economy measures. First of all, organic waste is the largest waste stream in the country and increased use of this waste stream for the production of animal feed and fodder, food supplements or organic fertilizers can contribute to the recovery of some of the value contained in this waste stream. Local production of organic fertilizers can bring multiple benefits, including a reliable supply of affordable soil improvement, products for farmers, reduced reliance on imported fertilizer products and improvements in soil carbon content. Next to this, a significant amount of food is lost along the food production value chain. Most of these losses occur due to poor packaging materials, storage facilities and the lack of adequate logistics. We estimate that within Kenya's agri-food sector, post-harvest food losses could amount to a total value of € 644 M lost on an annual basis. Investments in improving the aforementioned parts of the value chain could help the agri-food sector to reduce the food losses, thereby substantially increasing productivity levels. EU and bilateral cooperation projects in Kenya, but also the EIB and EU Member States DFIs could play a role in investing in food loss reduction measures. Topics of migration, mobility, and borders gained a new relevance in the world after the September 11, 2001 terrorist attacks on the World Trade Center in New York. The world has become acutely aware that national borders have taken on a different meaning and are no longer secure mechanisms that provide for the safety of any country's citizens. At the same time, international organizations and agreements have encouraged the movement of people as well as goods across borders. The authors of this volume describe how borders have become constructed and permeated through analyses on a range of topics, including migration, colonialism, refugees, minority politics, international politics, and identity politics. This group of international contributors address how these issues are situated in different parts of the world, including Europe, Southeast Asia, Australia, and the United States. Thomas Geisen, has a master of arts in politics and sociology and a Diploma in Social Work, having studied at the Technical University of Social Work in Saarbrücken, the University of Trier, and London Guildhall University. He is lecturer and researcher at the University of Zrich. Anthony Andrew Hickey is professor of sociology at Western Carolina University in Cullowhee, North Carolina. He received his B.A., M.A., and Ph.D. in Development Sociology at Cornell University, in New York. He has taught at George Mason University (U.S.A.) and the University of Hannover (Germany) and served as department head of sociology at George Mason University and dean of The Graduate School at Western Carolina University. Allen Karcher holds an associates degree with further studies at the University of Chicago, UICC, Washington University, Woodbrooke College (U.S.A.) and Bradford University (England). He also holds a doctorate in divinity (1979), and is currently translating, editing, and writing. The I Ching or Classic of Change is the oldest and most respected oracle book or divinatory system in the world. In SYMBOLS OF LOVE, author Stephen Karcher has selected parts of the I Ching hexagrams that specifically apply to relationships, and he provides simple instructions on how to consult this ancient Oracle and interpret its answers to learn the ways in which you can most successfully interact with friends, family and partners. The reader can discover which of the 22 'models of relationship' is at work in their lives at that moment, ask questions of the Oracle and use the answers to help understand what is happening in their interaction with others, avoid painful moments and the more obvious mistakes, and recognise when something or someone is truly significant. The New Jersey State Constitution provides an outstanding constitutional and historical account of the state's governing charter. In addition to an overview of New Jersey's constitutional history, it provides an in-depth, section-by-section analysis of the entire constitution, detailing the many significant changes that have been made since its initial drafting. This treatment, along with a table of cases, index, and bibliography provides an unsurpassed reference guide for students, scholars, and practitioners of New Jersey's constitution. State constitutions perform different functions and contain different provisions from the more-familiar U.S. Constitution. The book first outlines the historical development of New

Jersey's state constitution from 1776 to the present and explains the highlights of the process of state constitutional development, leading to the current New Jersey constitution. Next, each section of the current constitution is analyzed, including its origins, general intent and purpose, and important judicial interpretations illustrating the types of situations in which the section can come into play, including references to key academic analysis of each section. Careful explanation is provided, with illustrations from cases, of the complex and evolving relationship between rights guaranteed by the U.S. Constitution and rights guaranteed by the New Jersey constitution. In many instances, New Jersey's rights can be more protective than those included in the Federal Constitution. Finally, the book provides a thorough bibliographical essay reviewing the evolution of the New Jersey constitution. The Oxford Commentaries on the State Constitutions of the United States is an important new series that reflects a renewed international interest in constitutional history and provides expert insight into each of the 50 state constitutions. Each volume in this innovative series contains a historical overview of the state's constitutional development, a section-by-section analysis of its current constitution, and a comprehensive guide to further research. Under the expert editorship of Professor G. Alan Tarr, Director of the Center on State Constitutional Studies at Rutgers University, this series provides essential reference tools for understanding state constitutional law. Books in the series can be purchased individually or as part of a complete set, giving readers unmatched access to these important political documents. Includes extra sessions. Vols. for 1871-76, 1913-14 include an extra number, The Christmas bookseller, separately paged and not included in the consecutive numbering of the regular series. Few people outside of mathematics are aware of the varieties of mathematical experience - the degree to which different mathematical subjects have different and distinctive flavors, often attractive to some mathematicians and repellant to others. The particular flavor of the subject of minimal surfaces seems to lie in a combination of the concreteness of the objects being studied, their origin and relation to the physical world, and the way they lie at the intersection of so many different parts of mathematics. In the past fifteen years a new component has been added: the availability of computer graphics to provide illustrations that are both mathematically instructive and esthetically pleasing. During the course of the twentieth century, two major thrusts have played a seminal role in the evolution of minimal surface theory. The first is the work on the Plateau Problem, whose initial phase culminated in the solution for which Jesse Douglas was awarded one of the first two Fields Medals in 1936. (The other Fields Medal that year went to Lars V. Ahlfors for his contributions to complex analysis, including his important new insights in Nevanlinna Theory.) The second was the innovative approach to partial differential equations by Serge Bernstein, which led to the celebrated Bernstein's Theorem, stating that the only solution to the minimal surface equation over the whole plane is the trivial solution: a linear function.
