Combining historical geography with historical demography, and conceived as a study in environmental history, this book examines the long-term relationship between population, economy and environment in the northern half of the Indonesian island of Sulawesi. Using a rich variety of Dutch historical sources, including VOC and missionary archives, it attempts to reconstruct and analyse patterns of demographic, economic and landscape change throughout this large and ecologically diverse region over a period of almost three and a half centuries. Particular attention is given to the articulation between demographic and economic growth, to levels and determinants of reproductive fertility, to changing disease environments, and to the question of agricultural sustainability and its preconditions. The results call into question some common views regarding the reasons for low population growth, and the relationship between population density and landscape change, in the Southeast Asian past. "For more than 50 years, researchers ... have identified pheromones as the triggers for a wide range of mammalian behaviors and endocrine responses. In this book, [author] rejects this idea and states bluntly that, in contrast to insects, mammals do not have pheromones. ... [book title] directly challenges ideas about the role chemicals play in mammalian behavior and reproductive processes."--Book jacket.

Sinopsis : Sejarah tanah partikelir di Tangerang merupakan sejarah yang hampir terlupakan dalam khazanah sejarah Indonesia masa kolonial. Karena teramat penting untuk melihat sejauh mana perkembangan kota Batavia dan sekitarnya serta bagaimana dinamika perlawanan dan pertentangan khususnya yang diinisiasi oleh masyarakat petani dimulai dari pinggiran kota kolonial itu. Perlawanan ini, tidak saja menimbulkan instabilitas sosial yang merongrong kebijakan "Rust en Orde" namun juga mengakibatkan banyaknya aksi kriminalitas yang bermotif ekonomi maupun hanya sekedar balas dendam. Selain itu, nasionalisme yang mengemuka di Hindia Belanda awal abad 20 juga ikut menyusup masuk hingga ke pelosok sawah para petani. Melalui buku ini, pembaca akan dibawa menelusuri Tangerang masa kolonial hingga awal abad ke 20, dimana para tuan tanah partikelir mendominasi ekonomi setempat serta ikut campurnya pergerakan nasional yang sedang bangkit pada masa itu, dan merupakan faktor

tersendiri dari sejarah keruntuhan Hindia Belanda. www.guepedia.com

This book reviews insights into the neural circuits underlying a particularly fascinating form of social interaction, parental behavior. This book presents a detailed review of maternal and paternal behavior of particular mammalian species. It offer neuroscientists a spectrum of specific mammals that can be used as experimental models to explore particular topics on the functions of the nervous system. It shows that results coming from the laboratory can be translated into useful information for raising mammals on the farm, and it stimulates biologists to gain insights into the underpinnings of the complex mechanisms governing mammalian behavior in the wild. It also discusses the implications of this research for human parental behavior. This book examines Gaussian processes in both model-based reinforcement learning (RL) and inference in nonlinear dynamic systems. First, we introduce PILCO, a fully Bayesian approach for efficient RL in continuous-valued state and action spaces when no expert knowledge is available. PILCO takes model uncertainties consistently into account during long-term planning to reduce model bias. Second, we propose principled algorithms for robust filtering and smoothing in GP dynamic systems. There isn't a facet of human life that has not been touched and influenced by robots and automation. What makes robots and machines versatile is their computational intelligence. While modern intelligent sensors and powerful hardware capabilities have given a huge fillip to the growth of intelligent machines, the progress in the development of algorithms for smart interaction, collaboration and pro-activeness will result in the next quantum jump. This book deals with the recent advancements in design methodologies, algorithms and implementation techniques to incorporate intelligence in robots and automation systems. Several articles deal with navigation, localization and mapping of mobile robots, a problem that engineers and researchers are grappling with all the time. Fuzzy logic, neural networks and neuro-fuzzy based techniques for real world applications have been detailed in a few articles. This edited volume is targeted to present the latest state-of-the-art computational intelligence techniques in Robotics and Automation. It is a compilation of the extended versions of the very best papers selected from the many that

were presented at the 5th International Conference on Automation, Robotics and Applications (ICARA 2011) which was held in Wellington, New Zealand from 6-8 December, 2011. Scientists and engineers who work with robots and automation systems will find this book very useful and stimulating. Well over 18,000 total pages ... Play-acting but above all the opera have only seemingly little to do with our everyday life. In fact opera is a very artificial work of art in which reality is nevertheless present, but condensed in such a way that it touches us throughout the ages. In experiencing opera performances, we thus become companions of the bard Orpheus in Monteverdi's opera *L'Orfeo*, who mourns the death of his beloved nymph Eurydice with his laments. We transform ourselves into sympathetic and compassionate brothers and sisters of Orpheus, *Wozzeck*, *Tosca*, *Tristan*, *Isolde* or *Jenufa* and are thus directly referred to the perils and also pleasures in our own lives. In order to make the visual and sound dimensions of an opera tangible for the audience, a close interaction of dramaturges, actors, singers, dancers, directors, stage designers and technicians is necessary. What role do stage designers play in this? Don't some performances owe their success primarily to the work of the set designer? The stage settings created by Hans Dieter Schaal, who has worked on almost all German stages, but also in many important international theatre venues, including Vienna, Salzburg, Zurich, Brussels, Paris, Moscow and San Francisco, have, over and over again, such a lasting effect due to their visual power that they remain in the memory of the audience for a long time. The first volume on Hans Dieter Schaal's stage settings covered the years 1982 to 2000, and this book now brings out a further volume dedicated to the works from 2001 to 2021. The book is captivating not only because of its abundance of mostly large-format photographs and many design drawings, but also because of the detailed texts written by Schaal himself, which reveal how intensively the artist deals with the respective work. As a result he invents images that often trigger a completely new perspective on the works. Hans Dieter Schaal, born in Ulm in 1943, is an architect, landscape designer, stage designer, exhibition designer and artist. His works, the majority of which have been published by Edition Axel Menges, have found an audience far beyond his home country. The author lives and works near Biberach an der Riß. The field of robotic

vision has advanced dramatically recently with the development of new range sensors. Tremendous progress has been made resulting in significant impact on areas such as robotic navigation, scene/environment understanding, and visual learning. This edited book provides a solid and diversified reference source for some of the most recent important advancements in the field of robotic vision. The book starts with articles that describe new techniques to understand scenes from 2D/3D data such as estimation of planar structures, recognition of multiple objects in the scene using different kinds of features as well as their spatial and semantic relationships, generation of 3D object models, approach to recognize partially occluded objects, etc. Novel techniques are introduced to improve 3D perception accuracy with other sensors such as a gyroscope, positioning accuracy with a visual servoing based alignment strategy for microassembly, and increasing object recognition reliability using related manipulation motion models. For autonomous robot navigation, different vision-based localization and tracking strategies and algorithms are discussed. New approaches using probabilistic analysis for robot navigation, online learning of vision-based robot control, and 3D motion estimation via intensity differences from a monocular camera are described. This collection will be beneficial to graduate students, researchers, and professionals working in the area of robotic vision. Bringing together international expertise in rabbit production, topics covered in this fully updated volume include digestive physiology, feed formulation and product quality, as well as feeding strategies, feed processing, feed management around weaning and the relationship between nutrition and intestinal health. Brand new to this edition, the chapters also discuss the development of immune response and the role of intestinal microbiota, new dietary sources and additives, and feeding behaviour in pasture and organic feeding. A valuable resource for researchers and students of animal nutrition and production, this book provides a comprehensive, research-based review of nutrition for these important animals. The fourth edition of *The Cytokine Handbook* provides an encyclopedic coverage of the molecules that induce and regulate immune responses. Now expanded to two volumes, co-edited by Michael T Lotze, and written by over 120 international experts, the scope of the book has been broadened to include a major emphasis on the clinical applications of cytokines. The early chapters discuss individual cytokines, chemokines and receptors. Additional chapters discuss the clinical

implications and applications of cytokines, including cytokine gene transfer, antisense therapy and assay systems. This book is essential for researchers and clinicians interested in cytokines, including anyone working in cancer biology, transplantation, infectious diseases, autoimmunity or bioinformatics. Key Features * Covers all main cytokines and chemokines * Written by experts * Up-to-date- includes detailed referencing accessing current, modern literature and reflects the newest findings from the human genome * The new edition has been thoroughly revised and extended (now 2 volumes) as compared to the last edition, including new co-editor (MTL), new authors, new hot topics and new chapters * Includes major emphasis on clinical applications * Extensively illustrated with tables and figures

Domestication of vertebrates is based on the understanding of the needs of animals in their natural environment. Thus the success of this domestication throughout human history is largely dependant of the knowledge of the animal feeding behaviour. The aim of this volume is to provide advanced students and researchers with a review of current knowledge of feeding in domestic mammals and birds. The book also presents chapters on feeding behaviour in particular species; the scope is wide, covering not only ruminants, poultry and pigs, but also more specifically horses, rabbits and ostrich. Contributors include leading research workers from Europe, USA, Australia and South Africa.

Botany at the Bar is a bitters-making handbook with a beautiful, botanical difference - three scientists present the back-stories and exciting flavours of plants from around the globe and all in a range of tasty, healthy tinctures. Voorts een alfabetische lijst van Nederlandsche boeken in België uitgegeven. CHOICE Highly Recommended title, 2022! This 30-chapter volume informs students and professionals about the behavioral biology of animals commonly housed in laboratory and other captive settings. Each species evolved under specific environmental conditions, resulting in unique behavioral patterns, many of which are maintained in captivity even after generations of breeding. Understanding natural behavior is therefore a critical part of modern animal care practices. The descriptions, data, guidance, resources, and recommendations in this book will help the reader understand their animals better, refine the care and treatment that they receive, and improve the well-being, welfare, and wellness of their animals. The book is divided into three sections, all focusing on aspects of the behavioral biology of animals found in laboratories and related research settings. After five introductory

chapters, 25 chapters are dedicated to specific taxonomic groups (including mice, zebrafish, zebra finches, reptiles, macaques) while a concluding section of ethograms provides a centralized resource for those interested in understanding, and potentially quantifying, animal behavior. The Behavioral Biology of Laboratory Animals will provide anyone working in maintenance, care, and/or research programs that involve laboratory animals with information about the way the animals live in the wild, and the way that they should live in captive research settings. Many of the guidelines and recommendations will also be valuable to those managing and working with animals in other environments, including zoological parks, aquaria, and sanctuaries.

Eventually, you will completely discover a new experience and achievement by spending more cash. still when? complete you endure that you require to get those all needs subsequent to having significantly cash? Why dont you try to acquire something basic in the beginning? Thats something that will lead you to comprehend even more almost the globe, experience, some places, as soon as history, amusement, and a lot more?
